God's Green Guardians

'Agents for Change'

Issue 2: November 2026

"Live in agreement with one another. Do not be proud but ready to mix with everyone. Do not think of yourself better than others." Romans 12:16

Stewardship: Humans are entrusted to manage and protect nature responsibly.

Respect: Because the earth belongs to God, damaging it disrespects the Creator.

Litter and Rubbish: The impact on our world

Litter harms ecosystems, wildlife, human health, economies, and the climate by introducing waste and toxic chemicals into land, waterways, and oceans.	When plastic enters the ocean, it takes over 400 to 500 years to break down and harms marine wildlife, habitats, and the food chain	Plastic can still make its way into the ocean, even from hundreds of miles away. As much as 80% of the plastic in the ocean comes from land sources.	The plastic is not necessarily thrown directly into the sea, but it still ends up there. 

2.56 billion tonnes of waste is produced each year. 	Plastic litter dropped on the street doesn't stay there. Rain and wind can carry plastic waste into streams and rivers or into the drains - from there it travels to the ocean.	How Plastic enters the food chain:  The plankton digests the microplastic, fish eat the plankton and we eat the fish.

Did you know? There are roughly 5,25 trillion to 171 trillion pieces of plastic in the oceans.

What can we do?

Litter is bad, and can hurt our world but we can do something about it.

If we work together, we can make it better.

Take it home to leave no trace

Together we can make a difference

Everyone can help

Reduce, recycle, reuse

Animals need protection

Never leave litter on the floor

Don't damage animals habitats and homes

Remember not to drop your litter

Use your bins to help the environment

Bag it, bin it, don't leave it on the floor

Because animals could die or get hurt

If we don't do anything about it, the environment will just get worse

So we need to think about our choices

Help the future of our world.
