

Lesson 15 – Number – Subtract a 1 digit from a 2 digit number – crossing ten

NC Objective:

Similarly subtraction crossing 10 is recapped before children move onto more formal subtraction.

Resources needed:
Differentiated Sheets
Teaching Slides

Vocabulary: Subtraction, crossing tens, place value.

Just as with addition, children need to have a strong understanding of place value for subtraction. Children need to be able to count to 20 and need to be able to partition two-digit numbers in order to subtract from them. They need to understand the difference between one-digit and two-digit numbers and line them up in columns. In order to progress to using the number line more efficiently, children need to be secure in their number bonds.

Key Questions:

Are we counting backwards or forwards on the number line? Have we got enough ones to subtract?

Can we exchange a ten for ten ones?

How can we show the takeaway? Can we cross out the cubes?

★ Working Towards

★★ Working Within

★★★ Greater Depth

Use the number line to help you work out the subtractions.

11 12 13 14 15 16 17 18 19 20

$20 - 1 =$ $20 - 3 =$ $20 - 5 =$

$20 - 2 =$ $20 - 4 =$ $20 - 6 =$

Use number bonds to work out the subtractions.

$12 - 3 =$ $25 - 8 =$

$10 - 1 =$ $20 - 3 =$

Work out the subtractions.

$12 - 5 =$ $14 - 9 =$ $25 - 6 =$

$12 - 4 =$ $11 - 3 =$ $31 - 7 =$

What is the difference between the numbers?

$25 -$ $25 -$ $25 -$

Work out the subtractions.

$27 - 9 =$ $17 - 8 =$ $44 - 6 =$

$33 - 7 =$ $13 - 5 =$ $13 - 7 =$

Use the number line to help you work out the subtractions.

36 37 38 39 40 41 42 43 44 45

$45 - 1 =$ $45 - 3 =$ $45 - 5 =$

$45 - 2 =$ $45 - 4 =$ $45 - 6 =$

Use number bonds to work out the subtractions.

$15 - 9 =$ $33 - 7 =$

$15 -$ $33 -$

Work out the subtractions.

$72 - 5 =$ $26 - 8 =$ $17 - 8 =$

$44 - 7 =$ $82 - 6 =$ $65 - 7 =$

What is the difference between the numbers?

$55 - 6 =$ $44 - 9 =$ $13 - 9 =$

$28 - 9 =$ $93 - 5 =$ $61 - 6 =$

Use the number line to help you work out the subtractions.

$57 - 1 =$ $57 - 3 =$ $57 - 5 =$ $57 - 7 =$

$57 - 2 =$ $57 - 4 =$ $57 - 6 =$ $57 - 8 =$

Use number bonds to work out the subtractions.

$33 - 8 =$ $14 - 7 =$

$33 -$ $14 -$

What is the difference between the numbers?

$33 -$ $14 -$

Use the three digit cards to write a subtraction.

Here are three digit cards: 2, 4, 6

Here are three digit cards: 9, 7, 1

How many different answers can you find?

What is the greatest difference?

What is the smallest difference?

Children will have their number line started for them. They have a completed number bond shown to help them complete the next calculation. The other subtraction sentence is written for them.

Children will write the second number sentence themselves, having the diagram completed for them. They will complete the bonds.

Children complete the full diagram and will investigate statements.

Reasoning & Problem Solving

Ein is solving the subtraction $11 - 6$.

Here is her method.

I put 6 in my head and counted on to 11.

Is Ein's method efficient? Can you explain why? Can you think of another method to solve the subtraction.

Malachi is counting back to solve $33 - 7$.

He counts: 33, 32, 31, 30, 29, 28, 27

Is Malachi correct? Explain your answer.

Zach is solving the subtraction $12 - 5$.

Here is his method.

I put 12 in my head and counted back 5.

Is Zach's method efficient? Can you explain why? Can you think of another method to solve the subtraction.

Malachi is counting back to solve $22 - 6$.

He counts: 22, 20, 18, 16

Find the missing numbers.

Is Malachi correct? Explain your answer.

Zach and Ein are solving the subtraction $14 - 8$.

Here are their methods:

Ein: I put 8 in my head and counted on to 14.

Zach: I put 14 in my head and counted back 8.

Which method is the most efficient? Can you explain why? Can you think of another method to solve the subtraction.

Malachi is counting back to solve $45 - 9$.

Below are some of the numbers he counts: 45, 44, 42, 40, 37

Is Malachi correct? Explain your answer.

Use the number line to help you work out the subtractions.

$$20 - 1 = \underline{\quad\quad} \quad 20 - 3 = \underline{\quad\quad} \quad 20 - 5 = \underline{\quad\quad}$$

$$20 - 2 = \underline{\quad\quad} \quad 20 - 4 = \underline{\quad\quad} \quad 20 - 6 = \underline{\quad\quad}$$

Use number bonds to work out the subtractions.

$$10 - 1 = \underline{\quad\quad}$$

$$20 - 3 = \underline{\quad\quad}$$

Work out the subtractions.

$$12 - 5 = \underline{\quad\quad} \quad 14 - 9 = \underline{\quad\quad} \quad 25 - 6 = \underline{\quad\quad}$$

$$12 - 4 = \underline{\quad\quad} \quad 11 - 3 = \underline{\quad\quad} \quad 31 - 7 = \underline{\quad\quad}$$

What is the difference between the numbers?

$$\underline{25} - \underline{\quad\quad} = \underline{\quad\quad}$$

$$\underline{\quad\quad} - \underline{\quad\quad} = \underline{\quad\quad}$$

Work out the subtractions.

$$27 - 9 = \underline{\quad\quad} \quad 17 - 8 = \underline{\quad\quad} \quad 44 - 6 = \underline{\quad\quad}$$

$$33 - 7 = \underline{\quad\quad} \quad 13 - 5 = \underline{\quad\quad} \quad 13 - 7 = \underline{\quad\quad}$$

Use the number line to help you work out the subtractions.

$$20 - 1 = \underline{19} \quad 20 - 3 = \underline{17} \quad 20 - 5 = \underline{15}$$

$$20 - 2 = \underline{18} \quad 20 - 4 = \underline{16} \quad 20 - 6 = \underline{14}$$

Use number bonds to work out the subtractions.

$$10 - 1 = \underline{9}$$

$$20 - 3 = \underline{17}$$

Work out the subtractions.

$$12 - 5 = \underline{7} \quad 14 - 9 = \underline{5} \quad 25 - 6 = \underline{19}$$

$$12 - 4 = \underline{8} \quad 11 - 3 = \underline{8} \quad 31 - 7 = \underline{24}$$

What is the difference between the numbers?

$$\underline{25} - \underline{8} = \underline{17}$$

$$\underline{32} - \underline{6} = \underline{26}$$

Work out the subtractions.

$$27 - 9 = \underline{18} \quad 37 - 8 = \underline{29} \quad 44 - 6 = \underline{38}$$

$$33 - 7 = \underline{26} \quad 13 - 5 = \underline{8} \quad 13 - 7 = \underline{6}$$

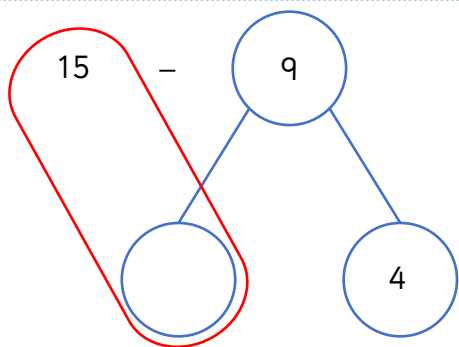

Use the number line to help you work out the subtractions.

$$45 - 1 = \underline{\quad} \quad 45 - 3 = \underline{\quad} \quad 45 - 5 = \underline{\quad}$$

$$45 - 2 = \underline{\quad} \quad 45 - 4 = \underline{\quad} \quad 45 - 6 = \underline{\quad}$$

Use number bonds to work out the subtractions.

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

Work out the subtractions.

$$72 - 5 = \underline{\quad} \quad 26 - 8 = \underline{\quad} \quad 17 - 8 = \underline{\quad}$$

$$44 - 7 = \underline{\quad} \quad 82 - 6 = \underline{\quad} \quad 65 - 7 = \underline{\quad}$$

What is the difference between the numbers?

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

Work out the subtractions.

$$55 - 6 = \underline{\quad} \quad 44 - 9 = \underline{\quad} \quad 13 - 9 = \underline{\quad}$$

$$28 - 9 = \underline{\quad} \quad 93 - 5 = \underline{\quad} \quad 61 - 6 = \underline{\quad}$$

Use the number line to help you work out the subtractions.

$$45 - 1 = \underline{44} \quad 45 - 3 = \underline{42} \quad 45 - 5 = \underline{40}$$

$$45 - 2 = \underline{43} \quad 45 - 4 = \underline{41} \quad 45 - 6 = \underline{39}$$

Use number bonds to work out the subtractions.

$$\underline{10} - \underline{4} = \underline{6}$$

$$\underline{30} - \underline{4} = \underline{26}$$

Work out the subtractions.

$$72 - 5 = \underline{67} \quad 26 - 8 = \underline{18} \quad 17 - 8 = \underline{9}$$

$$44 - 7 = \underline{37} \quad 82 - 6 = \underline{76} \quad 65 - 7 = \underline{58}$$

What is the difference between the numbers?

$$\underline{43} - \underline{9} = \underline{34}$$

$$\underline{21} - \underline{7} = \underline{14}$$

Work out the subtractions.

$$55 - 6 = \underline{49} \quad 44 - 9 = \underline{35} \quad 13 - 9 = \underline{4}$$

$$28 - 9 = \underline{19} \quad 93 - 5 = \underline{88} \quad 61 - 6 = \underline{55}$$

Use the number line to help you work out the subtractions.

$57 - 1 = \underline{\quad}$ $57 - 3 = \underline{\quad}$ $57 - 5 = \underline{\quad}$ $57 - 7 = \underline{\quad}$

$57 - 2 = \underline{\quad}$ $57 - 4 = \underline{\quad}$ $57 - 6 = \underline{\quad}$ $57 - 8 = \underline{\quad}$

Use number bonds to work out the subtractions.

33

-

8

$\underline{\quad} - \underline{\quad} = \underline{\quad}$

14

-

7

$\underline{\quad} - \underline{\quad} = \underline{\quad}$

What is the difference between the numbers?

$\underline{\quad} - \underline{\quad} = \underline{\quad}$

$\underline{\quad} - \underline{\quad} = \underline{\quad}$

Use the three digit cards to write a subtraction.

Here are three digit cards.

How many different answers can you find?

What is the greatest difference?

What is the smallest difference?

Here are three digit cards.

How many different answers can you find?

What is the greatest difference?

What is the smallest difference?

Use the number line to help you work out the subtractions.

$$57 - 1 = \underline{56} \quad 57 - 3 = \underline{54} \quad 57 - 5 = \underline{52} \quad 57 - 7 = \underline{50}$$

$$57 - 2 = \underline{55} \quad 57 - 4 = \underline{53} \quad 57 - 6 = \underline{51} \quad 57 - 8 = \underline{49}$$

Use number bonds to work out the subtractions.

What is the difference between the numbers?

$$\underline{34} - \underline{6} = \underline{28}$$

$$\underline{36} - \underline{9} = \underline{27}$$

Use the three digit cards to write a subtraction.

Here are three digit cards.

$$\begin{aligned} 24 - 6 &= 18 \\ 26 - 4 &= 22 \\ 42 - 6 &= 36 \\ 46 - 4 &= 42 \\ 62 - 4 &= 58 \\ 64 - 2 &= 62 \end{aligned}$$

How many different answers can you find?

What is the greatest difference?
62 is the greatest difference.

What is the smallest difference?
18 is the smallest difference.

Here are three digit cards.

$$\begin{aligned} 97 - 1 &= 96 \\ 91 - 7 &= 84 \\ 79 - 1 &= 78 \\ 71 - 9 &= 62 \\ 17 - 9 &= 8 \\ 19 - 7 &= 12 \end{aligned}$$

How many different answers can you find?

What is the greatest difference?
96 is the greatest difference.

What is the smallest difference?
8 is the smallest difference.

Esin is solving the subtraction $11 - 6$.

Here is her method:

Esin

I put 6 in my head and counted on to 11.

Is Esin's method efficient?

Can you explain why?

Can you think of another method to solve the subtraction.

Malachi is counting back to solve $33 - 7$.

He counts:

33, 32, 31, 30, 29, 28, 27

Is Malachi correct?

Explain your answer.

Esin is solving the subtraction $11 - 6$.

Here is her method:

Esin

I put 6 in my head and counted on to 11.

Is Esin's method efficient?

Can you explain why?

Can you think of another method to solve the subtraction.

Malachi is counting back to solve $33 - 7$.

He counts:

33, 32, 31, 30, 29, 28, 27

Is Malachi correct?

Explain your answer.

Esin is solving the subtraction $11 - 6$.

Here is her method:

Esin

I put 6 in my head and counted on to 11.

Is Esin's method efficient?

Can you explain why?

Can you think of another method to solve the subtraction.

Esin's method of finding the difference is efficient.

She counts: 6, 7, 8, 9, 10, 11.

Malachi is counting back to solve $33 - 7$.

He counts:

33, 32, 31, 30, 29, 28, 27

Is Malachi correct?

Explain your answer.

Malachi is not correct as he has included 33 when counting back. This is a common mistake and can be modelled on a number line.

Esin is solving the subtraction $11 - 6$.

Here is her method:

Esin

I put 6 in my head and counted on to 11.

Is Esin's method efficient?

Can you explain why?

Can you think of another method to solve the subtraction.

Esin's method of finding the difference is efficient.

She counts: 6, 7, 8, 9, 10, 11.

Malachi is counting back to solve $33 - 7$.

He counts:

33, 32, 31, 30, 29, 28, 27

Is Malachi correct?

Explain your answer.

Malachi is not correct as he has included 33 when counting back. This is a common mistake and can be modelled on a number line.

Zach is solving the subtraction $12 - 5$.

Here is his method:

Zach

I put 12 in my head and counted back 5.

Is Zach's method efficient?
Can you explain why?
Can you think of another method to solve the subtraction.

Malachi is counting back to solve $22 - 6$.

He counts:

22, __, 20, __, 18, __, 16

Find the missing numbers.

Is Malachi correct?

Explain your answer.

Zach is solving the subtraction $12 - 5$.

Here is his method:

Zach

I put 12 in my head and counted back 5.

Is Zach's method efficient?
Can you explain why?
Can you think of another method to solve the subtraction.

Malachi is counting back to solve $22 - 6$.

He counts:

22, __, 20, __, 18, __, 16

Find the missing numbers.

Is Malachi correct?

Explain your answer.

Zach is solving the subtraction $12 - 5$.

Here is his method:

Zach

I put 12 in my head and counted back 5.

Is Zach's method efficient?
Can you explain why?
Can you think of another method to solve the subtraction.

Zach's method is efficient.
He counts: 12, 11, 10, 9, 8, 7.

Malachi is counting back to solve $22 - 6$.

He counts:

22, 21, 20, 19, 18, 17, 16

Find the missing numbers.

Is Malachi correct?

Explain your answer.

Malachi is correct.

Zach is solving the subtraction $12 - 5$.

Here is his method:

Zach

I put 12 in my head and counted back 5.

Is Zach's method efficient?
Can you explain why?
Can you think of another method to solve the subtraction.

Zach's method is efficient.
He counts: 12, 11, 10, 9, 8, 7.

Malachi is counting back to solve $22 - 6$.

He counts:

22, 21, 20, 19, 18, 17, 16

Find the missing numbers.

Is Malachi correct?

Explain your answer.

Malachi is correct.

Zach and Esin are solving the subtraction $14 - 8$.

Here are their methods:

Esin

I put 8 in my head and counted on to 14.

Zach

I put 14 in my head and counted back 8.

Whose method is the most efficient?
Can you explain why?
Can you think of another method to solve the subtraction.

Malachi is counting back to solve $45 - 9$.

Below are some of the numbers he counts.

45, __, __, 42, __, 40, __, __, 37

Is Malachi correct?

Explain your answer.

Zach and Esin are solving the subtraction $14 - 8$.

Here are their methods:

Esin

I put 8 in my head and counted on to 14.

Zach

I put 14 in my head and counted back 8.

Whose method is the most efficient?
Can you explain why?
Can you think of another method to solve the subtraction.

Malachi is counting back to solve $45 - 9$.

Below are some of the numbers he counts.

45, __, __, 42, __, 40, __, __, 37

Is Malachi correct?

Explain your answer.

Zach and Esin are solving the subtraction $14 - 8$.

Here are their methods:

Esin

I put 8 in my head and counted on to 14.

Zach

I put 14 in my head and counted back 8.

Whose method is the most efficient?

Can you explain why?

Can you think of another method to solve the subtraction.

Zach's method is most efficient because there are less steps to take. The numbers are quite far apart so Esin's method of finding the difference takes a long time and has more room for error.

Malachi is counting back to solve $45 - 9$.

Below are some of the numbers he counts.

45, 44, 43, 42, 41, 40, 39, 38, 37

Is Malachi correct?

Explain your answer.

Malachi is not correct as he has included 45 when counting back. This is a common mistake and can be modelled on a number line.

Zach and Esin are solving the subtraction $14 - 8$.

Here are their methods:

Esin

I put 8 in my head and counted on to 14.

Zach

I put 14 in my head and counted back 8.

Whose method is the most efficient?

Can you explain why?

Can you think of another method to solve the subtraction.

Zach's method is most efficient because there are less steps to take. The numbers are quite far apart so Esin's method of finding the difference takes a long time and has more room for error.

Malachi is counting back to solve $45 - 9$.

Below are some of the numbers he counts.

45, 44, 43, 42, 41, 40, 39, 38, 37

Is Malachi correct?

Explain your answer.

Malachi is not correct as he has included 45 when counting back. This is a common mistake and can be modelled on a number line.
