## Unit Overview and Guidance

- The exemplification has been taken from the NCETM online 'Resource Toolkit', with additions in order to ensure full coverage
 objectives. Many thanks go to the White Rose Maths hub for permission to include their resources
- The NCETM reasoning questions have also been incorporated into each unit and are identified in pale purple boxes underneath the group of the most relevant objectives.
 included for easy reference.
- Hyperlinks to NRich activities have also been added to this version. These are found by clicking on the blue buttons like this one $\square$ at the bottom of relevant objective.
 altered and this is primarily where an objective has been split between two units.
- Each unit is sub-divided into sections for ease of planning. Sub-categories in this unit are;

1. Estimate, measure, weigh and compare
2. Money
3. Perimeter
4. Time

|  | Reception | Yr 1 | Yr 2 | Yr 3 |
| :---: | :---: | :---: | :---: | :---: |
|  | The Big Ideas <br> Shape, Space and Measures (Early Learning Goals) <br> Use everyday language to talk about size, weight, capacity, position, distance, time and money to compare quantities and objects and to solve problems. | The Big Ideas <br> Measurement is about comparison, for example measuring to find out which rope is the longest. <br> Measurement is about equivalence, for example how many cubes are equivalent to the length of the table or the mass of the teddy? <br> Standard units can initially be introduced through using a unit that is greater than the things being compared, for example comparing the capacity of a cup and a carton by filling each and pouring into matching bottles to compare the two. <br> Measuring is a practical activity and the activities below should be conducted in practical contexts, using real materials. | The Big Idea <br> We need standard units of measure in order to compare things more accurately and consistently. | The Big Ideas <br> Developing benchmarks to support estimation skills is important as pupils become confident in their use of standard measures. The height of a door frame, for example, is approximately 2 metres, and a bag of sugar weighs approximately 1 kilogram. |

MEASUREMENT (MEA - 9 weeks)

## MEASUREMENT (MEA - 9 weeks)

compare, describe and solve practical problems for capacity/volume (full/empty, more than, less than, quarter)

Introduce capacity
Compare capacity

Use their experience of standard units to make realistic estimates, answering
questions such as:

- Does this bottle hold more or less than the litre jug?

Captain Conjecture says "Each of theses glassess contains the same amount of juice"
Do you agree? Explain your answer.

measure and begin to record the following capacity and volume

## Measure capacity

Use standard units to measure and compare objects. For example, they use a litre jug to measure how much more the washing-up bowl holds than the cola bottle.
choose and use appropriate standard units to estimate and measure temperature ( ${ }^{\circ} \mathrm{C}$ ) and capacity (litres $/ \mathrm{ml}$ ) to the neares appropriate unit, using thermometers and measuring vessels

Millilitres
Litres

## Temperature

Suggest sensible units you might use to measure: how much water is in a cup; the weight of my reading book; how long it takes me to wash my hands, what is the temperature on this thermometer?

Choose a piece of equipment to help you measure: how long this lesson lasts; how much water a cup holds.

How much water
is in this
measuring jug?

## compare and order

volume/capacity and record the results using $>,<$, $=$

## Compare capacity

Megan and Jack are growing beans Megan's plant is 25 cm tall. Jack's is 38 cm tall. Whose plant is the taller? By how much? Can you compare By how much? Can
them using > or < ?
measure, compare, add and subtract: volume/capacity ( $1 / \mathrm{m}$ )

## Measure capacity (1)

Measure capacity (2)
Compare capacity

## Add and subtract capacity

Here is a tea urn and a teapot. The bottles show how much water each can hold.

How much more does the tea urn hold?
Capacity: Find a container that they think would hold one litre and check to find out if they were correct.

## MEASUREMENT (MEA - 9 weeks)

compare, describe and solve practical problems for mass or weight (e.g. heavy/light, heavier than, lighter than

## Introduce weight and mass

Compare mass

Use their experience of standard units to make realistic estimates, answering
questions such as

- Which of these things do you think will weigh less than a kilogram?

There are five cars in one side of the scales. The scales are balanced. What could the doll weigh?

measure and begin to record the following mass/weight

## Measure mass

## Top tips

How do you know that this (object) is heavier / longer / taller than this one? Explain how you know

## Application

(Can be practical)
Which two pieces of string are the same length as this book?
choose and use appropriate standard units to estimate and measure length/height in any direction (m/cm); mass (kg/g); to the nearest appropriate unit, using rulers and scales

## Measure mass (g)

Measure mass (kq)
Suggest sensible units you might use to measure: the weight of my reading book;
Choose a piece of equipment to help you measure: the weight of your shoe;
About how heavy do you think your pencil case is?
compare and order mass, and record the results using $>,<$, = Compare mass

## Top tips

Put these measurements in orde starting with the smallest.
75 grammes
85 grammes
100 grammes
Explain your thinking Position the symbols Place the correct symbol between the measurements >or <
$36 \mathrm{~cm} \square 63 \mathrm{~cm}$
$130 \mathrm{ml} \square 103 \mathrm{ml}$
Explain your thinking Application
(Practical)
Draw two lines whose lengths differ by 4 cm .
measure, compare, add and subtract: mass (kg/g);

## Measure mass (1)

Measure mass (2)

## Compare mass

## Add and subtract mass

Mass: Say which object in the
classroom is heavier than 100 g/kilogram/half-kilograms and know how to check if they are correct.
What is the weight of the flour shown by this scale?

## Top Tips

Put these measurements in order starting with the largest. Explain you thinking
Half a litre, Quarter of a litre, 300 ml Position the symbols Place the correct symbol between the
measurements >or <
$306 \mathrm{~cm} \square$ Half a metre
930 ml ■ 1 litre

## Write more statements

If there are 630 ml of water in a jug. How much water do you need to add to end up with a litre of water? What if there was 450 ml to start with?

## Testing conditions

A square has sides of a whole number of centimetres. Which of the following measurements could represent its perimeter? $8 \mathrm{~cm} \quad 18 \mathrm{~cm} \quad 24 \mathrm{~cm} \quad 25 \mathrm{~cm}$

## 40-60+ months Beginning to use everyday language related to money

## Adult Initiated

Use coins to pay for things or buy things in the class 'shop', tickets on the 'bus', at the 'funfair' or 'skittle alley'... recognising that coins are used to pay and give change.
Distinguish coins.
Sort money into spaces in a shop till, e.g. 10p, 50p, £1, £2;
Feed 20 p or 50 p coins into a pretend drinks machine or car park ticket machine
Buy 20p stamps, using 20p coins;
In the 'pound shop', buy items costing $£ 1$, using $£ 1$ coins.
Visit a real shop and give children the opportunity to handle real money
Play money games.
For example, roll dice to collect $£ 1$ coins to the value of $£ 10 \ldots$ or 1 p coins to the value of 10p.
Help the puppet who has got into a muddle counting his money. Can you help him sort his coins? How should he do it? Can you think of a good way to count these coins?
Begin to recognise that some coins have a greater value than others, and will buy more: for example, $2 p$ is worth more than $1 p ; 5 p$

Begin to count up how much is this is altogether?
Work out what to buy and how to pay. James paid 3p for chews. Which coins could he use? What if he paid $4 p$ ?
Make price labels on items in the class 'shop' and match penny coins to them.
Extend to using combinations of $2 p$ and $1 p$ coins.
Enabling Environments -child initiated, adult supported
Make sure the resources are available for children to extend and revisit the adult initiated experiences opposite.
Role play: cost of buying tickets for bus and train rides. Ice cream stall making labels for cost and using $1 p$ coins to match prices and to buy the ice-creams.
Paying for repairs at the role play garage
Snack café/shop: pay the appropriate coin or number of 1 p coins to access snack as part of the independent snack routines in place.
Role play: shops (food, pets, bakery, greengrocers, market stall, shoe shop etc.) writing price labels and paying using pennies and /or appropriate coins.
How much will this cost altogether?

## NRICH EYFS: Shopping

recognise and know the value of different denominations of coins and notes
Recognising coins
Recognising notes

## Counting in coins

Distinguish coins by sorting them and start to understand their value. They begin to recognise that some coins have a greater value than others, and will buy more: for example, $2 p$ is worth more than $1 p ; 5 p$ is worth more than $2 p ; £ 2$ is worth more than $£ 1$. They play money games and collect $1 p$ or $2 p$ coins to the value of 10 p and begin to count up 'how much this is altogether'. They extend their activities in the classroom shop, paying for items that cost $1 p, 3 p, 5 p, 7 p$ or $9 p$ using only $2 p$ coins, and receiving the appropriate amount of change in $1 p$ coins. They use coins to help them to respond to questions such as:

- Michael had £5. He spent $£ 3$. How much did he have left?
- Rosie had a 10p coin. She spent 3p. How much change did she get?
- How much altogether is $1 p$ and $2 p$ and $5 p$ ?
- Sunita spent $5 p$ and $6 p$ on toffees. What did she pay altogether?
- Chews cost 2 p each. How much do three chews cost?
- An apple costs 12p. Which two coins would pay for it? What combinations of 3 coins would pay for it?
Solve one step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems

## Possibilities

Ella has two silver coins.
How much money might she have?
recognise and use symbols for pounds (£) and pence (p); combine amounts to make a particular value;
Count money - pence
Count money - pounds
Count money - notes and coins
Select amounts
Find the total
Find the difference
find different combinations of coins that equal the same amounts of money Make the same amount

Compare money
Holly has these coins

Harry has the same amount of money but has six coins.
What are they? Is there only one possible answer?

solve simple problems in practical context involving addition and subtraction of money of the same unit, including giving change
Find change
Two-step problems
Jess has saved 62p. She spends 15 p. How much money does she have left?

She pays with a 50p piece. How much change does she get?

## Possibilities

How many different ways can you make 63 p using only 20p, 10p and 1 p coins?
add and subtract amounts of money to give change, using both $£$ and $p$ in practical contexts

## Pounds and pence

Converting pounds and pence

## Adding money

Subtracting money

## Giving change

Jake wants to buy a comic that costs $£ 1$. He saves 25 p one week and 40p the next. How much more money does he need to buy the comic?
Add these prices: £6.73, £9.10 and $£ 7.00$ to find the total. Find out how much more do you need to add to get £23?

## Position the symbols

Place the correct symbols between the measurements > or < Explain your thinking
£23.60 2326p 2623p

North Yorkshire
County Council

## MEASUREMENT (MEA - 9 weeks)

## 40-60+ months use everyday language related to time 40-60+ months order and sequence familiar events

## Adult Initiated

Talk about days of the week in everyday activities like taking the register, keeping a weather chart...
What did you do yesterday?
What will you do tomorrow?
Who has a birthday next week? Which day is it?
Begin to sequence events in the day,
Tell me what you did on your birthday
Make a zigzag book or arrange picture cards to tell the story of their special day or journey:

## Sequence events in a well-known story

The Very Hungry Caterpillar by Eric Carle
The Bad-Tempered Ladybird by Eric Carle
Mr Wolf's Week by Colin Hawkins
Enabling Environments -child initiated, adult supported

## Indoors/Outdoors

Role play: home corner- e.g. birthdays. What day is the party on? What time are we going to the shops, doctors etc. Provide wall diaries, calendars and photographs to talk about -time, NRICH EYFS: Timing
sequence events in chronological orde
using language such as: before and using language such as: before and after, next, first, today, yesterday, tomorrow, morning, afternoon and evening

## Before and after

Continue to develop the concept of time in terms of time passing and sequencing events in familiar story or day-to-day routines
They use terms such as morning, afternoon and evening, yesterday and tomorrow. They learn to order the days of the week and learn that weekend days are Saturday and Sunday.
They listen to stories and rhymes about time, such as The Very Hungry Caterpillar or The Bad-Tempered Ladybird by Eric Carle, Monster Monday by Susanna Gretz or Hard Boiled Legs by Michael Rosen and Quentin Blake.

recognise and use language relating to dates, including days of the week, weeks, months and years

## Dates

Order the months of the year and make a 12-page classroom calendar with pictures of each month, writing significant events underneath, such as Diwali, Pancake Day or Midsummer's Day, or the dates of their birthdays.
compare and sequence intervals of time
Durations of time
Compare durations of time
Which is greater?
Half an hour 45 minutes
65 minutes 1 hour
Can you put these times in order from earliest to latest

- Half past twelve in the afternoon
- Quarter to four in the afternoon

Nine o'clock in the morning

- Nine o'clock in the evening

## MEASUREMENT (MEA - 9 weeks)

## MEASUREMENT (MEA - 9 weeks)

know the number of seconds in a
minute and the number of days in minute and the number of days in
each month, year and leap year Months and years

## Hours in a day

How many minutes is 140 seconds?
What is the date of the day after $30^{\text {th }}$ November?

How many days are they in January? record and compare time in terms of seconds, minutes, hours and o'clock;
compare durations of events, for example to calculate the time taken by particular events or tasks
Finding the duration

## Compare the duration

## Start and end times

Estimate how long your favourite TV programme lasts. Use a television guide to work out how close your estimation was.

It takes 35 minutes to walk from home to school. I need to be there by 8.55 am. What time do I need to leave home?

How much does it cost to hire a rowing boat for three hours?

| Boat Hire |  |
| :---: | :---: |
| Motor boats <br> $£ 1.50$ for 15 minutes | Rowing boats <br> $£ 2.50$ for 1 hour |

Sasha pays $£ 3.00$ to hire a moto boat. She goes out at 3:20 pm. By what time must she return? Explain how you solved this problem. Could you have done it in a different way?

Sally and Maria both went to the gym on Saturday. Sally was there from 2 pm until 3.30 pm . Maria was there from 12.30 pm until 3.15 pm . Who spent the longer time at the gym? How much longer was she there than her friend?

MEASUREMENT (MEA - 9 weeks)
