Is it important
to explore the
unknown?

In the news this week

NASA is preparing to send a powerful new telescope into space to explore some of the universe's biggest mysteries. The Nancy Grace Roman Space Telescope will search large areas of the sky for distant planets and study galaxies, dark matter and dark energy. Scientists hope it will help us learn how the universe has changed and why it is growing faster.

Things to talk about at home ...

- > Are you interested in space?
- > Why do you think some people are fascinated by space and the wider universe?
- > What mystery about space would you most like to know the answer to?
- > Have you ever discovered something because you asked a good question?
