

## **Science Revision information**

### **Exam Board : Edexcel (Pearson)**

#### **1. Specification points**

Each pupil has been given the specification points showing them all the information they need to learn for each of their science papers. It is important these points are used as a checklist for revision to ensure they know the whole course.

Pupils must also make sure they are familiar with all the core practicals as they will be asked questions on these. A list of these practicals has been given to students.

#### **2. Revision guides**

To be able to answer science questions pupils need to be able to recall a lot of information. They need to spend time learning facts from their exercise books or revision guides. Revision guides can be bought from the science department. For students who have missed any lessons throughout the GCSE course, the revision guides would be of huge benefit.

#### **3. Workbooks**

These are available to buy from the science department. They go with the revision guide and have questions relating to each page of the revision guide so the pupils can check whether they know the information well enough.

#### **4. Past questions**

Practising exam questions is vital for success at GCSE. The following link gives pupils access to sample papers and GCSE questions sorted into different topics. There are markschemes for all the questions.

#### **5. Calculators**

All pupils will need a scientific calculator for their exams. These can be bought from the Maths department and should be brought into school everyday as we are now revising for the GCSEs in lessons. If pupils do not bring calculators to the exams the school cannot guarantee that there will be one available for use.
