Mathematics overview: Stage 7 Star

Unit	*Hrs*	*KNOWLEDGE*
Numbers and the number system	6	• use the concepts and vocabulary of prime numbers, factors (divisors), multiples, common factors, common multiples, highest common factor and lowest common multiple • use positive integer powers and associated real roots (square, cube and higher), recognise powers of 2, 3, 4, 5 (ALSO 6*) • recognise and use sequences of triangular, square and cube numbers, simple arithmetic progressions • order positive and negative integers, decimals and fractions • use the symbols =, ≠, <, >, ≤, ≥ (ALSO 6*)
Counting and comparing	3	• identify the value of each digit in numbers given to three decimal places (NEW, ALSO 6*) • understand and use place value (e.g. when working with very large or very small numbers, and when calculating with decimals) • solve problems involving addition, subtraction, multiplication and division (NEW, ALSO 6*)
Calculating	9	• multiply and divide numbers by 10, 100 and 1000 giving answers up tp three decimal places (NEW, ALSO 6*) • multiply one-digit numbers with up to two decimal places by whole numbers (NEW, ALSO 6*) • use written division methods in cases where the answer has up to two decimal places (NEW, ALSO 6*) • associate a fraction with division and calculate decimal fraction equivalents (for example 0.375) for a simple fraction (for example 3/8) (NEW, ALSO 6*) • solve addition and subtraction multi-step problems in contexts, deciding which operation and methods to use and why (NEW, ALSO 6*) • use conventional notation for priority of operations, including brackets and powers • recognise and use relationships between operations, including inverse operations (e.g. cancellation to simplify calculations and expressions)
Visualising and constructing	6	• use conventional terms and notations: points, lines, vertices, edges, planes, parallel lines, perpendicular lines, right angles, polygons, regular polygons and polygons with reflection and/or rotation symmetries (ALSO 6*) • use the standard conventions for labelling and referring to the sides and angles of triangles (ALSO 6*) • draw diagrams from written description (ALSO 6*) • interpret plans and elevations of 3D shapes (ALSO 8*)
Investigating properties of shapes	6	• identify properties of the faces, surfaces, edges and vertices of: cubes, cuboids, prisms, cylinders, pyramids, cones and spheres • derive and apply the properties and definitions of: special types of quadrilaterals, including square, rectangle, parallelogram, trapezium, kite and rhombus; and triangles and other plane figures using appropriate language • find unknown angles in any triangles, quadrilaterals and regular polygons (NEW) • identify and apply circle definitions and properties, including: centre, radius, chord, diameter, circumference
Algebraic proficiency: tinkering	9	• understand and use the concepts and vocabulary of expressions, equations, formulae, terms, identities and factors (ALSO 6*) • use and interpret algebraic notation, including: ab in place of a × b, 3y in place of y + y + y and 3 × y, a^2 in place of a × a, a^3 in place of a × a × a, a/b in place of a ÷ b, brackets (ALSO 6*) • simplify and manipulate algebraic expressions by collecting like terms and multiplying a single term over a bracket (ALSO 6*) • simplify and manipulate algebraic expressions by taking out common factors and simplifying expressions involving sums, products and powers, including the laws of indices (NEW) • substitute numerical values into formulae and expressions • where appropriate, interpret simple expressions as functions with inputs and outputs
Exploring fractions, decimals and percentages	6	• express one quantity as a fraction of another, where the fraction is less than 1 or greater than 1 • recall and use equivalencies between simple fractions, decimals and percentages, including in different contexts (NEW, ALSO 6*) • define percentage as 'number of parts per hundred' • work interchangeably between terminating decimals and their corresponding fractions such as 3.5 and 7/2 or 0.375 and 3/8 (ALSO, 8*)
Proportional reasoning	3	• use ratio notation, including reduction to simplest form (ALSO 6*) • divide a given quantity into two parts in a given part: part or part: whole ratio (ALSO 6*) • identify and work with fractions in ratio problems (ALSO 8*)
Pattern sniffing	3	• generate terms of a sequence from a term-to-term rule or a position-to-term rule

Measuring space	3	• deduce expressions to calculate the nth term of a linear sequence (ALSO 8*) • use, read, write and convert between standard units, converting measurements of length, mass, volume and time from a smaller unit of measure to a larger unit, and vice versa, using decimal notation to up to three decimals places. (NEW, ALSO 6*) • use standard units of mass, length, time, money and other measures (including standard compound measures) using decimal quantities where appropriate (ALSO 6*) • change freely between related standard units (e.g. time, length, area, volume/capacity, mass) in numerical contexts • measure line segments and angles in geometric figures • convert between miles and kilometres (ALSO 6*) • apply the properties of angles at a point, angles at a point on a straight line, vertically opposite angles (ALSO 6*) • apply the four operations, including formal written methods, to simple fractions (proper and improper), and mixed numbers • add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions (NEW, ALSO 6*) • multiply simple pairs of proper fractions, writing the answer in its simplest form [for example, 1/4 × 1/2 = 1/8] (NEW, ALSO 6*) • divide proper fractions by whole numbers (for example , 1/3 divided by 2 = 1/6 • interpret percentages and percentage changes as a fraction or a decimal, and interpret these multiplicatively • compare two quantities using percentages • solve problems involving percentage change, including percentage increase/decrease • solve problems involving percentage change, including original value problems, and simple interest including in financial mathematics (NEW, ALSO 8*) • solve linear equations in one unknown algebraically (ALSO 6*) • solve linear equations with the unknown on both sides of the equation (ALSO 8*) • solve linear inequalities in one variable • represent the solution of an inequality on a number line • use standard units of measure and related concepts (length, area, volume/capacity) • calculate perimeters of 2D shapes (ALSO 6*) • know and apply formulae to calculate area of triangles, parallelograms, trapezia • calculate surface area of cubes and cuboids • calculate the surface area of a triangular prism when lengths are known • know and apply formulae to calculate volume of cuboids • understand and use standard mathematical formulae • round numbers and measures to an appropriate degree of accuracy (e.g. to a specified number of decimal places or significant figures) • estimate answers; check calculations using approximation and estimation, including answers obtained using technology • solve problems which require answers to be rounded to specified degrees of accuracy (NEW, ALSO 6*) • recognise and use relationships between operations, including inverse operations (e.g. cancellation to simplify calculations and expressions) • work with coordinates in all four quadrants • understand and use lines parallel to the axes, y = x and y = -x • plot graphs of equations that correspond to straight-line graphs in the coordinate plane (NEW) • solve geometrical problems on coordinate axes • identify, describe and construct congruent shapes including on coordinate axes, by considering rotation, reflection and translation • describe translations as 2D vectors (ALSO 6*) • relate relative expected frequencies to theoretical probability, using appropriate language and the 0 – 1 probability scale (ALSO 6*) • record describe and analyse the frequency of outcomes of probability experiments using tables and frequency trees (ALSO 8*) • construct theoretical possibility spaces for single and combined experiments with equally likely outcomes and use these to calculate theoretical probabilities • apply the property that the probabilities of an exhaustive set of outcomes sum to one (ALSO 6*) • apply ideas of randomness, fairness and equally likely events to calculate expected outcomes of multiple future experiments (NEW) • interpret and construct tables, charts and diagrams, including frequency tables, bar charts, frequency diagrams, pie charts and pictograms for categorical data, vertical line charts for ungrouped discrete numerical data and know their appropriate use • Interpret, analyse and compare the distributions of data sets from univariate empirical distributions through appropriate measures of central tendency (median, mean and mode) and spread (range) (ALSO 6*)
Investigating angles	3	
Calculating fractions, decimals and percentages	9	
Solving equations and inequalities	6	
Calculating space	9	
Checking, approximating and estimating	3	
Mathematical movement	6	
Understanding Risk 1	3	
Presentation of data	6	
Measuring data	3	

Numbers and the number system	Stage 8*	6 hours

KNOWLEDGE **The Big Picture**: Number and Place Value progression map

- **use the concepts and vocabulary of prime numbers, factors (divisors), multiples, common factors, common multiples, highest common factor and lowest common multiple**
- **use positive integer powers and associated real roots (square, cube and higher), recognise powers of 2, 3, 4, 5 (ALSO 6*)**
- **recognise and use sequences of triangular, square and cube numbers, simple arithmetic progressions**

SKILLS

- Recall prime numbers up to 50
- Know how to test if a number up to 150 is prime
- Know the meaning of and find the 'highest common factor' and 'lowest common multiple'
- Recognise when a problem involves using the highest common factor or lowest common multiple of two numbers
- Be able to break a number into product of its prime factors
- Be able to use a venn diagram to find the HCF/LCM
- Understand and use the notation and rules of powers (laws of indices)
- Know the meaning of the square root symbol (√)
- Use a scientific calculator to calculate powers and roots
- Make the connection between squares and square roots (and cubes and cube roots)
- Recall the first 15 square numbers
- Recall the first 5 cube numbers

Suggested resources

KM: Exploring primes activities: Factors of square numbers; Mersenne primes; LCM sequence; n^2 and $(n + 1)^2$; n^2 and $n^2 + n$; $n^2 + 1$; $n! + 1$; $n! - 1$; $x^2 + x + 41$
KM: Use the method of Eratosthenes' sieve to identify prime numbers, but on a grid 6 across by 17 down instead. What do you notice?
KM: Square number puzzle
KM: History and Culture: Goldbach's Conjectures
NRICH: Factors and multiples
NRICH: Powers and roots

Learning review
www.diagnosticquestions.com

Prerequisites

- Know how to find common multiples of two given numbers
- Know how to find common factors of two given numbers
- Recall multiplication facts to 12 × 12 and associated division facts

Bring on the Maths⁺: Moving on up!
Number and Place Value: v6

Mathematical language

((Lowest) common) multiple and LCM
((Highest) common) factor and HCF
Power
(Square and cube) root
Triangular number, Square number, Cube number, Prime number
Linear sequence

Notation
Index notation: e.g. 5^3 is read as '5 to the power of 3' and means '3 lots of 5 multiplied together'
Radical notation: e.g. √49 is generally read as 'the square root of 49' and means 'the positive square root of 49'; $\sqrt[3]{8}$ means 'the cube root of 8'

Agreed Common Teaching Approaches

Pupils need to know how to use a scientific calculator to work out powers and roots.
Note that while the square root symbol (√) refers to the positive square root of a number, every positive number has a negative square root too.
NCETM: Departmental workshop: Index Numbers
NCETM: Glossary

Common approaches
The following definition of a prime number should be used in order to minimise confusion about 1: A prime number is a number with exactly two factors.
Every classroom has a set of number classification posters on the wall

Reasoning opportunities and probing questions

- When using Eratosthenes sieve to identify prime numbers, why is there no need to go further than the multiples of 7? If this method was extended to test prime numbers up to 200, how far would you need to go? Convince me.
- Kenny says '20 is a square number because $10^2 = 20$'. Explain why Kenny is wrong. Kenny is partially correct. How could he change his statement so that it is fully correct?
- Always / Sometimes / Never: the lowest common multiple of two numbers is found by multiplying the two numbers together

Cross Curricular Links

Possible misconceptions

- Many pupils believe that 1 is a prime number – a misconception which can arise if the definition is taken as 'a number which is divisible by itself and 1'
- A common misconception is to believe that $5^3 = 5 \times 3 = 15$
- See pedagogical note about the square root symbol too

Counting and comparing	Stage 8*	3 hours

KNOWLEDGE

The Big Picture: Number and Place Value progression map

- **order positive and negative integers, decimals and fractions**
- **use the symbols =, ≠, <, >, ≤, ≥ (ALSO 6*)**
- **identify the value of each digit in numbers given to three decimal places (NEW, ALSO 6*)**

SKILLS

- Place a set of mixed positive and negative numbers in order
- Place a set of decimals in order
- Identify a common denominator that can be used to order a set of fractions
- Order fractions where the denominators are not multiples of each other
- Convert between fractions, decimals and percentages
- Order a set of numbers including a mixture of fractions, decimals and negative numbers
- Use inequality symbols to compare numbers
- Make correct use of the symbols = and ≠

Suggested resources

KM: Farey Sequences
KM: Decimal ordering cards 2
KM: Maths to Infinity: Fractions, decimals and percentages
KM: Maths to Infinity: Directed numbers
NRICH: Greater than or less than?

Learning review

- www.diagnosticquestions.com

Prerequisites

- Understand that negative numbers are numbers less than zero
- Order a set of decimals with a mixed number of decimal places (up to a maximum of three)
- Order fractions where the denominators are multiples of each other
- Order fractions where the numerator is greater than 1
- Know how to simplify a fraction by cancelling common factors

Mathematical language

Positive number
Negative number
Integer
Numerator
Denominator

Notation
The 'equals' sign: =
The 'not equal' sign: ≠
The inequality symbols: < (less than), > (greater than), ≤ (less than or equal to), ≥ (more than or equal to)

Agreed Common Teaching Approaches

Zero is neither positive nor negative. The set of integers includes the natural numbers {1, 2, 3, …}, zero (0) and the 'opposite' of the natural numbers {-1, -2, -3, …}.
Pupil must use language correctly to avoid reinforcing misconceptions: for example, 0.45 should never be read as 'zero point forty-five'; 5 > 3 should be read as 'five is greater than 3', not '5 is bigger than 3'.
Ensure that pupils read information carefully and check whether the required order is smallest first or greatest first.
The equals sign was designed by Robert Recorde in 1557 who also introduced the plus (+) and minus (-) symbols.
NCETM: Glossary

Common approaches
Teachers use the language 'negative number' to avoid future confusion with calculation that can result by using 'minus number'
Every classroom has a negative number washing line on the wall

Reasoning opportunities and probing questions

- Jenny writes down 0.400 > 0.58. Kenny writes down 0.400 < 0.58. Who do you agree with? Why?
- Find a fraction which is greater than 3/5 and less than 7/8. And another. And another …
- Convince me that -15 < -3

Cross Curricular Links

Possible misconceptions

- Some pupils may believe that 0.400 is greater than 0.58
- Pupils may believe, incorrectly, that:
  - A fraction with a larger denominator is a larger fraction
  - A fraction with a larger numerator is a larger fraction
  - A fraction involving larger numbers is a larger fraction
- Some pupils may believe that -6 is greater than -3. For this reason ensure pupils avoid saying 'bigger than'

Calculating	Stage 8*	9 hours

KNOWLEDGE

The Big Picture: Calculation progression map

- **understand and use place value (e.g. when working with very large or very small numbers, and when calculating with decimals)**
- **solve problems involving addition, subtraction, multiplication and division (NEW, ALSO 6*)**
- **multiply and divide numbers by 10, 100 and 1000 giving answers up to three decimal places (NEW, ALSO 6*)**
- **multiply one-digit numbers with up to two decimal places by whole numbers (NEW, ALSO 6*)**
- **use written division methods in cases where the answer has up to two decimal places (NEW, ALSO 6*)**
- **associate a fraction with division and calculate decimal fraction equivalents (for example 0.375) for a simple fraction (for example 3/8) (NEW, ALSO 6*)**
- **solve addition and subtraction multi-step problems in contexts, deciding which operation and methods to use and why (NEW, ALSO 6*)**
- **use conventional notation for priority of operations, including brackets and powers**
- **recognise and use relationships between operations, including inverse operations (e.g. cancellation to simplify calculations and expressions)**

SKILLS

- Be fluent at multiplying a three-digit or a two-digit number by a two-digit number
- Be fluent when using the method of short division, including decimal answers
- Be able to multiply and divide by powers of 10
- Use knowledge of place value to multiply with decimals
- Use knowledge of place value to divide a decimal
- Use knowledge of place value to divide by a decimal
- Use knowledge of inverse operations when dividing with decimals
- Be able to convert fractions to decimals by division
- Know the order of operations for the four operations
- Use brackets and powers in problems involving the order of operations
- Understand and apply the fact that addition and subtraction have equal priority
- Understand and apply the fact that multiplication and division have equal priority

Suggested resources

KM: Long multiplication template
KM: Dividing (lots)
KM: Misplaced points
KM: Maths to Infinity: Multiplying and dividing
NRICH: Cinema Problem
NRICH: Funny factorisation
NRICH: Skeleton
NRICH: Long multiplication

Learning review

- www.diagnosticquestions.com

Prerequisites

- Fluently recall multiplication facts up to 12 × 12
- Fluently apply multiplication facts when carrying out division
- Know the formal written method of long multiplication
- Know the formal written method of short division
- Know the formal written method of long division
- Convert between an improper fraction and a mixed number

Bring on the Maths⁺: Moving on up!
Calculating: v2, v3, v4, v5
Fractions, decimals & percentages: v6, v7
Solving problems: v2

Mathematical language

Improper fraction
Top-heavy fraction
Mixed number
Operation
Inverse
Long multiplication
Short division
Long division
Remainder

Agreed Common Teaching Approaches

Establish level of understanding and ability based on expectations of pupils at primary school
The grid method is promoted as a method that aids numerical understanding and later progresses to multiplying algebraic statements.
NCETM: Departmental workshop: Place Value
NCETM: Subtraction
NCETM: Multiplication and division
NCETM: Glossary

Common approaches
The use of long multiplication is to be promoted as the 'most efficient method'.
Short division is promoted as the 'most efficient method'.
If any acronym is promoted to help remember the order of operations, then BIDMAS is used as the I stands for indices.

Reasoning opportunities and probing questions

- Jenny says that 2 + 3 × 5 = 25. Kenny says that 2 + 3 × 5 = 17. Who is correct? How do you know?
- Find missing digits in otherwise completed long multiplication / short division calculations
- Show me a calculation that is connected to 14 × 26 = 364. And another, and another …

Cross Curricular Links

Possible misconceptions

- The use of BIDMAS (or BODMAS) can imply that division takes priority over multiplication, and that addition takes priority over subtraction. This can result in incorrect calculations.
- Pupils may incorrectly apply place value when dividing by a decimal for example by making the answer 10 times bigger when it should be 10 times smaller.

Visualising and constructing	Stage 8*	*6 hours*

KNOWLEDGE **The Big Picture**: Properties of Shape progression map

- **use conventional terms and notations: points, lines, vertices, edges, planes, parallel lines, perpendicular lines, right angles, polygons, regular polygons and polygons with reflection and/or rotation symmetries (ALSO 6*)**
- **use the standard conventions for labelling and referring to the sides and angles of triangles (ALSO 6*)**
- **draw diagrams from written description (ALSO 6*)**
- **interpret plans and elevations of 3D shapes (ALSO 8*)**

SKILLS

- Know the meaning of faces, edges and vertices
- Use notation for parallel lines
- Know the meaning of 'perpendicular' and identify perpendicular lines
- Know the meaning of 'regular' polygons
- Identify line and rotational symmetry in polygons
- Use AB notation for describing lengths
- Use ∠ABC notation for describing angles
- Use a ruler to accurately measure line segments to the nearest millimetre
- Use a protractor to accurately measure angles to the nearest degree
- Use ruler and protractor to construct triangles from written descriptions
- To be able to use a compass
- Use ruler and compasses to construct triangles when all three sides known
- Know and understand the vocabulary of plans and elevations
- Interpret plans and elevations and planes of symmetry in 3D shapes

Suggested resources

KM: Shape work (selected activities)
NRICH: Notes on a triangle

Learning review
www.diagnosticquestions.com

Prerequisites

- Use a ruler to measure and draw lengths to the nearest millimetre
- Use a protractor to measure and draw angles to the nearest degree

Mathematical language

Edge, Face, Vertex (Vertices)
Plane
Parallel
Perpendicular
Regular polygon
Rotational symmetry
Plan, Elevation

Notation
The line between two points A and B is AB
The angle made by points A, B and C is ∠ABC
The angle at the point A is Â
Arrow notation for sets of parallel lines
Dash notation for sides of equal length

Agreed Common Teaching Approaches

NCETM: Departmental workshop: Constructions
The equals sign was designed (by Robert Recorde in 1557) based on two equal length lines that are equidistant
NCETM: Glossary

Common approaches
Dynamic geometry software to be used by all students to construct and explore dynamic diagrams of perpendicular and parallel lines.

Reasoning opportunities and probing questions

- Given SSS, how many different triangles can be constructed? Why? Repeat for ASA, SAS, SSA, AAS, AAA.
- Always / Sometimes / Never: to draw a triangle you need to know the size of three angles; to draw a triangle you need to know the size of three sides.
- Convince me that a hexagon can have rotational symmetry with order 2.

Cross Curricular Links

Possible misconceptions

- Two line segments that do not touch are perpendicular if they would meet at right angles when extended
- Pupils may believe, incorrectly, that:
  - perpendicular lines have to be horizontal / vertical
  - only straight lines can be parallel
  - all triangles have rotational symmetry of order 3
  - all polygons are regular

Investigating properties of shapes	Stage 8*	6 hours

KNOWLEDGE

The Big Picture: Properties of Shape progression map

- **identify properties of the faces, surfaces, edges and vertices of: cubes, cuboids, prisms, cylinders, pyramids, cones and spheres**
- **derive and apply the properties and definitions of: special types of quadrilaterals, including square, rectangle, parallelogram, trapezium, kite and rhombus; and triangles and other plane figures using appropriate language**
- **find unknown angles in any triangles, quadrilaterals and regular polygons (NEW)**
- **identify and apply circle definitions and properties, including: centre, radius, chord, diameter, circumference**

SKILLS

- Know the vocabulary of 3D shapes
- Know the connection between faces, edges and vertices in 3D shapes
- Recall the names and shapes of special triangles and quadrilaterals
- Know the properties of the special quadrilaterals (including diagonals)
- Apply the properties of triangles to solve problems and calculate unknown angles
- Apply the properties of quadrilaterals to solve problems and calculate unknown angles
- Be able to find the interior angle sum and angle of a regular polygon
- Know the total of the exterior angles in any polygon
- Establish the size of an exterior angle in a regular polygon
- Be able to label parts of a circle

Suggested resources

KM: Euler's formula
KM: Visualising 3D shapes
KM: Dotty activities: Shapes on dotty paper
KM: What's special about quadrilaterals? Constructing quadrilaterals from diagonals and summarising results.
KM: Investigating polygons. Tasks one and two should be carried out with irregular polygons.
NRICH: Property chart
NRICH: Quadrilaterals game

Learning review

- www.diagnosticquestions.com

Prerequisites

- Know the names of common 3D shapes
- Know the meaning of face, edge, vertex
- Understand the principle of a net
- Know the names of special triangles
- Know the names of special quadrilaterals
- Know the meaning of parallel, perpendicular
- Know the notation for equal sides, parallel sides, right angles

Bring on the Maths+: Moving on up!
Properties of shapes: v1, v2

Mathematical language

Face, Edge, Vertex (Vertices)
Cube, Cuboid, Prism, Cylinder, Pyramid, Cone, Sphere
Quadrilateral
Square, Rectangle, Parallelogram, (Isosceles) Trapezium, Kite, Rhombus
Delta, Arrowhead
Diagonal
Perpendicular
Parallel
Triangle
Scalene, Right-angled, Isosceles, Equilateral

Notation
Dash notation to represent equal lengths in shapes and geometric diagrams
Right angle notation

Agreed Common Teaching Approaches

Ensure that pupils do not use the word 'diamond' to describe a kite, or a square that is 45° to the horizontal. 'Diamond' is not the mathematical name of any shape.
A cube is a special case of a cuboid and a rhombus is a special case of a parallelogram
A prism must have a polygonal cross-section, and therefore a cylinder is not a prism. Similarly, a cone is not a pyramid.
NCETM: Departmental workshop: 2D shapes
NCETM: Glossary

Common approaches
Every classroom has a set of triangle posters and quadrilateral posters on the wall
Models of 3D shapes to be used by all students during this unit of work

Reasoning opportunities and probing questions

- Show me an example of a trapezium. And another. And another …
- Always / Sometimes / Never: The number of vertices in a 3D shape is greater than the number of edges
- Which quadrilaterals are special examples of other quadrilaterals? Why? Can you create a 'quadrilateral family tree'?
- What is the same and what is different: Rhombus / Parallelogram?

Cross Curricular Links

Possible misconceptions

- Some pupils may think that all trapezia are isosceles
- Some pupils may think that a diagonal cannot be horizontal or vertical
- Two line segments that do not touch are perpendicular if they would meet at right angles when extended. Therefore the diagonals of an arrowhead (delta) are perpendicular despite what some pupils may think
- Some pupils may think that a square is only square if 'horizontal', and even that a 'non-horizontal' square is called a diamond
- The equal angles of an isosceles triangle are not always the 'base angles' as some pupils may think

Algebraic proficiency: tinkering	Stage 8*	9 hours

KNOWLEDGE

The Big Picture: Algebra progression map

- **understand and use the concepts and vocabulary of expressions, equations, formulae, terms, identities and factors (ALSO 6*)**
- **use and interpret algebraic notation, including: ab in place of a × b, 3y in place of y + y + y and 3 × y, a^2 in place of a × a, a^3 in place of a × a × a, a/b in place of a ÷ b, brackets (ALSO 6*)**
- **simplify and manipulate algebraic expressions by collecting like terms and multiplying a single term over a bracket (ALSO 6*)**
- **simplify and manipulate algebraic expressions by taking out common factors and simplifying expressions involving sums, products and powers, including the laws of indices (NEW)**
- **substitute numerical values into formulae and expressions**
- **where appropriate, interpret simple expressions as functions with inputs and outputs**

SKILLS

- Know the meaning of expression, term, formula, equation, identity, inequality and factor
- Know basic algebraic notation (the rules of algebra)
- Use letters to represent variables
- Identify like terms in an expression
- Simplify an expression by collecting like terms (including powers)
- Know how to multiply a (positive) single term over a bracket (including powers)
- Know how to factorise a linear expression by identifying a common factor (including powers)
- Substitute positive and negative numbers into expressions and formulae
- Be able to write an expression

Suggested resources

KM: Pairs in squares. Prove the results algebraically.
KM: Algebra ordering cards
KM: Spiders and snakes. See the 'clouding the picture' approach
KM: Use number patterns to develop the multiplying out of brackets
KM: Maths to Infinity: Brackets
NRICH: Your number is …
NRICH: Crossed ends
NRICH: Number pyramids and More number pyramids

Learning review

- www.diagnosticquestions.com

Prerequisites

- Use symbols (including letters) to represent missing numbers
- Substitute numbers into worded formulae
- Substitute numbers into simple algebraic formulae
- Know the order of operations

Bring on the Maths$^+$: Moving on up!
Algebra: v1

Mathematical language

Algebra
Expression, Term, Formula (formulae), Equation, Function, Variable
Mapping diagram, Input, Output
Represent
Substitute
Evaluate
Like terms
Simplify / Collect
Identity
Factor
Notation
See key concepts above

Agreed Common Teaching Approaches

Pupils will have experienced some algebraic ideas previously. Ensure that there is clarity about the distinction between representing a variable and representing an unknown.
Note that each of the statements 4x, 42 and 4½ involves a different operation after the 4, and this can cause problems for some pupils when working with algebra.
NCETM: Algebra
NCETM: Glossary

Common approaches
All pupils are expected to learn about the connection between mapping diagrams and formulae (to represent functions) in preparation for future representations of functions graphically.

Reasoning opportunities and probing questions

- Show me an example of an expression / formula / equation
- Always / Sometimes / Never: 4(g+2) = 4g+8, 3(d+1) = 3d+1, $a^2 = 2a$, ab = ba
- What is wrong?
- Jenny writes 2a + 3b + 5a – b = 7a + 3. Kenny writes 2a + 3b + 5a – b = 9ab. What would you write? Why?

Cross Curricular Links

Possible misconceptions

- Some pupils may think that it is always true that a=1, b=2, c=3, etc.
- A common misconception is to believe that $a^2 = a \times 2 = a2$ or 2a (which it can do on rare occasions but is not the case in general)
- When working with an expression such as 5a, some pupils may think that if a=2, then 5a = 52.
- Some pupils may think that 3(g+4) = 3g+4
- The convention of not writing a coefficient of 1 (i.e. '1x' is written as 'x' may cause some confusion. In particular some pupils may think that 5h – h = 5

Exploring fractions, decimals and percentages	Stage 8*	6 hours

KNOWLEDGE

The Big Picture: Fractions, decimals and percentages progression map

- **express one quantity as a fraction of another, where the fraction is less than 1 or greater than 1**
- **recall and use equivalencies between simple fractions, decimals and percentages, including in different contexts (NEW, ALSO 6*)**
- **define percentage as 'number of parts per hundred'**
- **work interchangeably between terminating decimals and their corresponding fractions such as 3.5 and 7/2 or 0.375 and 3/8 (ALSO, 8*)**

SKILLS

- Write one quantity as a fraction of another where the fraction is less than 1
- Write one quantity as a fraction of another where the fraction is greater than 1
- Write a fraction in its lowest terms by cancelling common factors
- Convert between mixed numbers and improper fractions
- Find a fraction of an amount
- Be able to convert between fractions, decimals and percentages
- Understand that a percentage means 'number of parts per hundred'
- Write a quantity as a percentage of another
- Find a percentage of an amount
- Be able to identify whether a decimal is terminating or recurring

Suggested resources

KM: Crazy cancelling, silly simplifying
NRICH: Rod fractions

Learning review

- www.diagnosticquestions.com

Prerequisites

- Understand the concept of a fraction as a proportion
- Understand the concept of equivalent fractions
- Understand the concept of equivalence between fractions and percentages

Bring on the Maths+: Moving on up!
Fractions, decimals & percentages: v1, v2

Mathematical language

Fraction
Improper fraction
Proper fraction
Vulgar fraction
Percentage
Proportion
Terminating
Recurring

Notation
Diagonal fraction bar / horizontal fraction bar

Agreed Common Teaching Approaches

NRICH: Teaching fractions with understanding
NCETM: Teaching fractions
NCETM: Departmental workshop: Fractions
NCETM: Glossary

Common approaches
All pupils are made aware that 'per cent' is derived from Latin and means 'out of one hundred'

Reasoning opportunities and probing questions

- Jenny says '1/10 is the same as proportion as 10% so 1/5 is the same proportion as 5%.' What do you think? Why?
- What is the same and what is different: 1/10 and 10% … 1/5 and 20%?
- Show this fraction as part of a square / rectangle / number line / …

Cross Curricular Links

Possible misconceptions

- A fraction can be visualised as divisions of a shape (especially a circle) but some pupils may not recognise that these divisions must be equal in size, or that they can be divisions of any shape.
- Pupils may not make the connection that a percentage is a different way of describing a proportion
- Pupils may think that it is not possible to have a percentage greater than 100%

Proportional reasoning	Stage 8*	3 hours

KNOWLEDGE

The Big Picture: Ratio and Proportion progression map

- **use ratio notation, including reduction to simplest form (ALSO 6*)**
- **divide a given quantity into two parts in a given part: part or part: whole ratio (ALSO 6*)**
- **identify and work with fractions in ratio problems (ALSO 8*)**

Return to overview

SKILLS

- Describe a comparison of measurements or objects using the language 'a to b'
- Describe a comparison of measurements or objects using ratio notation a:b
- Use ratio notation to describe a comparison of more than two measurements or objects
- Use fractions fluently in situations involving ratio and proportion
- Convert between different units of measurement
- State a ratio of measurements in the same units and different units
- Simplify a ratio by cancelling common factors
- Identify when a ratio is written in its lowest terms
- Find the value of a 'unit' in a division in a ratio problem
- Divide a quantity in two parts in a given part:part ratio
- Divide a quantity in two parts in a given part:whole ratio

Suggested resources

KM: Maths to Infinity: FDPRP
KM: Stick on the Maths: Ratio and proportion
NRICH: Toad in the hole
NRICH: Mixing lemonade
NRICH: Food chains
NRICH: Tray bake

Learning review

- www.diagnosticquestions.com

Prerequisites

- Find common factors of pairs of numbers
- Convert between standard metric units of measurement
- Convert between units of time
- Recall multiplication facts for multiplication tables up to 12 × 12
- Recall division facts for multiplication tables up to 12 × 12
- Solve comparison problems

Bring on the Maths*: Moving on up!
Ratio and proportion: #1

Mathematical language

Ratio
Proportion
Compare, comparison
Part
Simplify
Common factor
Cancel
Lowest terms
Unit

Notation
Ratio notation a:b for part:part or part:whole

Agreed Common Teaching Approaches

Note that ratio notation is first introduced in this stage.
When solving division in a ratio problems, ensure that pupils express their solution as two quantities rather than as a ratio.
NCETM: The Bar Model
NCETM: Multiplicative reasoning
NCETM: Glossary

Common approaches
All pupils are explicitly taught to use the bar model as a way to represent a division in a ratio problem

Reasoning opportunities and probing questions

- Show me a set of objects that demonstrates the ratio 3:2. And another, and another …
- Convince me that the ratio 120mm:0.3m is equivalent to 2:5
- Always / Sometimes / Never: the smaller number comes first when writing a ratio
- Using Cuisenaire rods: If the red rod is 1, explain why d (dark green) is 3. Can you say the value for all the rods? (w, r, g, p, y, d, b, t, B, o). Extend this understanding of proportion by changing the unit rod e.g. if r = 1, p = ?; b = ?; o + 2B=? If B = 1; y = ? 3y = ?; o = ? o + p = ? If o + r = 6/7; t = ?

Cross Curricular Links

Possible misconceptions

- Some pupils may think that a:b always means part:part
- Some pupils may try to simplify a ratio without first ensuring that the units of each part are the same
- Many pupils will want to identify an additive relationship between two quantities that are in proportion and apply this to other quantities in order to find missing amounts

Pattern sniffing	Stage 8*	3 hours

KNOWLEDGE

The Big Picture: Algebra progression map

- **generate terms of a sequence from a term-to-term rule or a position-to-term rule**
- **deduce expressions to calculate the nth term of a linear sequence (ALSO 8*)**

Return to overview

SKILLS

- Use a term-to-term rule to generate a linear sequence
- Use a term-to-term rule to generate a non-linear sequence
- Find the term-to-term rule for a sequence
- Describe a number sequence
- Solve problems involving the term-to-term rule for a sequence
- Solve problems involving the term-to-term rule for a non-numerical sequence
- Understand the meaning of a position to term rule
- Use algebra to describe the position-to-term rule of a linear sequence
- Use the nth term of a sequence to deduce if a given number is in a sequence
- Use linear number patterns to solve problems
- Identify the first 10 triangular numbers

Suggested resources

KM: Maths to Infinity: Sequences
NRICH: Shifting times tables
NRICH: Odds and evens and more evens

Learning review

- www.diagnosticquestions.com

Prerequisites

- Know the vocabulary of sequences
- Find the next term in a linear sequence
- Find a missing term in a linear sequence
- Generate a linear sequence from its description

Bring on the Maths^{+}: Moving on up!
Number and Place Value: #4, #5

Mathematical language

Pattern
Sequence
Linear
Term
Term-to-term rule
Ascending
Descending
Expression

Agreed Common Teaching Approaches

'Term-to-term rule' is the only new vocabulary for this unit.
Position-to-term rule, and the use of the nth term, are not developed until later stages.
NRICH: Go forth and generalise
NCETM: Algebra

Common approaches
All students are taught to describe the term-to-term rule for both numerical and non-numerical sequences

Reasoning opportunities and probing questions

- Show me a (non-)linear sequence. And another. And another.
- What's the same, what's different: 2, 5, 8, 11, 14, … and 4, 7, 10, 13, 16, …?
- Create a (non-linear/linear) sequence with a 3rd term of '7'
- Always/ Sometimes /Never: The 10th term of is double the 5th term of the (linear) sequence
- Kenny thinks that the 20th term of the sequence 5, 9, 13, 17, 21, … will be 105. Do you agree with Kenny? Explain your answer.

Cross Curricular Links

Possible misconceptions

- When describing a number sequence some students may not appreciate the fact that the starting number is required as well as a term-to-term rule
- Some pupils may think that all sequences are ascending
- Some pupils may think the (2n)th term of a sequence is double the nth term of a (linear) sequence

Measuring space	Stage 8*	3 hours

KNOWLEDGE **The Big Picture**: Measurement and mensuration progression map

- **use, read, write and convert between standard units, converting measurements of length, mass, volume and time from a smaller unit of measure to a larger unit, and vice versa, using decimal notation to up to three decimals places. (NEW, ALSO 6*)**
- **use standard units of mass, length, time, money and other measures (including standard compound measures) using decimal quantities where appropriate (ALSO 6*)**
- **change freely between related standard units (e.g. time, length, area, volume/capacity, mass) in numerical contexts**
- **convert between miles and kilometres (ALSO 6*)**

Return to overview

SKILLS

- Convert fluently between metric units of length
- Convert fluently between metric units of mass
- Convert fluently between metric units of volume / capacity
- Convert fluently between units of time
- Convert fluently between units of money
- Solve practical problems that involve converting between units
- State conclusions clearly using the units correctly

Suggested resources

KM: Sorting units
KM: Stick on the Maths: Units
NRICH: Temperature

Learning review

- www.diagnosticquestions.com

Prerequisites

- Convert between metric units
- Use decimal notation up to three decimal places when converting metric units
- Convert between common Imperial units; e.g. feet and inches, pounds and ounces, pints and gallons
- Convert between units of time
- Use 12- and 24-hour clocks, both analogue and digital

Bring on the Maths+: Moving on up!
Measures: #3

Mathematical language

Length, distance
Mass, weight
Volume
Capacity
Metre, centimetre, millimetre
Tonne, kilogram, gram, milligram
Litre, millilitre
Hour, minute, second
Inch, foot, yard
Pound, ounce
Pint, gallon
Line segment

Notation
Abbreviations of units in the metric system: m, cm, mm, kg, g, l, ml
Abbreviations of units in the Imperial system: lb, oz

Agreed Common Teaching Approaches

Weight and mass are distinct though they are often confused in everyday language. Weight is the force due to gravity, and is calculated as mass multiplied by the acceleration due to gravity. Therefore weight varies due to location while mass is a constant measurement.
The prefix 'centi-' means one hundredth, and the prefix 'milli-' means one thousandth. These words are of Latin origin.
The prefix 'kilo-' means one thousand. This is Greek in origin.
Classify/Estimate angle first
NCETM: Glossary

Common approaches
Every classroom has a sack of sand (25 kg), a bag of sugar (1 kg), a cheque book (1 cheque is 1 gram), a bottle of water (1 litre, and also 1 kg of water) and a teaspoon (5 ml)

Reasoning opportunities and probing questions

- Show me another way of describing 2.5km. And another. And another.
- Show me another way of describing 3.4 litres. And another. And another.
- Show me another way of describing3.7kg. And another. And another.
- Kenny thinks that 14:30 is the same time as 2.30 p.m. Do you agree with Kenny? Explain your answer.
- What's the same, what's different: 2 hours 30 minutes, 2.5 hours, 2⅓ hours and 2 hours 20 minutes?

Cross Curricular Links

Possible misconceptions

- Some pupils may write amounts of money incorrectly; e.g. £3.5 for £3.50, especially if a calculator is used at any point
- Some pupils may apply an incorrect understanding that there are 100 minutes in a hour when solving problems
- Some pupils may struggle when converting between 12- and 24-hour clock notation; e.g. thinking that 15:00 is 5 o' clock
- Some pupils may use the wrong scale of a protractor. For example, they measure an obtuse angle as 60° rather than 120°.

Investigating angles	Stage 8*	*3 hours*

KNOWLEDGE

The Big Picture: Position and direction progression map

- **apply the properties of angles at a point, angles at a point on a straight line, vertically opposite angles, corresponding and alternate angles (ALSO 6*)**

Return to overview

SKILLS

- Identify fluently angles at a point, angles at a point on a line and vertically opposite angles
- Identify known angle facts in more complex geometrical diagrams
- Use knowledge of angles to calculate missing angles in geometrical diagrams
- Explain reasoning using vocabulary of angles
- Identify alternate angles and know that they are equal
- Identify corresponding angles and know that they are equal

Suggested resources

KM: Maths to Infinity: Lines and angles
KM: Stick on the Maths: Angles
NRICH: Triangle problem
NRICH: Square problem
NRICH: Two triangle problem

Learning review

- www.diagnosticquestions.com

Prerequisites

- Identify angles that meet at a point
- Identify angles that meet at a point on a line
- Identify vertically opposite angles
- Know that vertically opposite angles are equal

Mathematical language

Angle
Degrees
Right angle
Acute angle
Obtuse angle
Reflex angle
Protractor
Vertically opposite
Geometry, geometrical, alternate, corresponding, interior, exterior

Notation
Right angle notation
Arc notation for all other angles
The degree symbol (°)

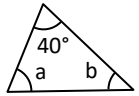
Agreed Common Teaching Approaches

It is important to make the connection between the total of the angles in a triangle and the sum of angles on a straight line by encouraging pupils to draw any triangle, rip off the corners of triangles and fitting them together on a straight line. However, this is not a proof and this needs to be revisited in Stage 8 using alternate angles to prove the sum is always 180°.
The word 'isosceles' means 'equal legs'. What do you have at the bottom of equal legs? Equal ankles!
NCETM: Glossary

Common approaches
Teachers convince pupils that the sum of the angles in a triangle is 180° by ripping the corners of triangles and fitting them together on a straight line.

Reasoning opportunities and probing questions

- Show me possible values for a and b.
  And another. And another.

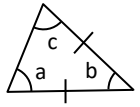


- Convince me that the angles in a triangle total 180°
- Convince me that the angles in a quadrilateral must total 360°
- What's the same, what's different: Vertically opposite angles, angles at a point, angles on a straight line and angles in a triangle?
- Kenny thinks that a triangle cannot have two obtuse angles. Do you agree? Explain your answer.
- Jenny thinks that the largest angle in a triangle is a right angle? Do you agree? Explain your thinking.

Cross Curricular Links

Possible misconceptions

- Some pupils may think it's the 'base' angles of an isosceles that are always equal. For example, they may think that a = b rather than a = c.



- Some pupils may make conceptual mistakes when adding and subtracting mentally. For example, they may see that one of two angles on a straight line is 127° and quickly respond that the other angle must be 63°.
- Avoid using the terms 'F and Z angles' to represent corresponding and alternate angles.

Calculating fractions, decimals and percentages	Stage 8*	9 hours

KNOWLEDGE

The Big Picture: Fractions, decimals and percentages progression map

- **apply the four operations, including formal written methods, to simple fractions (proper and improper), and mixed numbers**
- **add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions (NEW, ALSO 6*)**
- **multiply simple pairs of proper fractions, writing the answer in its simplest form [for example, $^1/_4 \times {}^1/_2 = {}^1/_8$] (NEW, ALSO 6*)**
- **divide proper fractions by whole numbers (for example , 1/3 divided by 2 = 1/6**
- **interpret percentages and percentage changes as a fraction or a decimal, and interpret these multiplicatively**
- **compare two quantities using percentages**
- **solve problems involving percentage change, including percentage increase/decrease**
- **solve problems involving percentage change, including original value problems, and simple interest including in financial mathematics (NEW, ALSO 8*)**

Return to overview

SKILLS

- Apply addition to proper fractions, improper fractions and mixed numbers
- Apply subtraction to proper fractions, improper fractions and mixed numbers
- Multiply proper and improper fractions
- Multiply mixed numbers
- Divide a proper fraction by a proper fraction
- Apply division to improper fractions and mixed numbers
- Use calculators to find a percentage of an amount using multiplicative methods
- Identify the multiplier for a percentage increase or decrease
- Use calculators to increase (decrease) an amount by a percentage using multiplicative methods
- Compare two quantities using percentages
- Know that percentage change = actual change ÷ original amount
- Calculate the percentage change in a given situation, including percentage increase / decrease
- Solve problems involving simple and compound interest
- Solve problems involving percentage change, including original value problems

Suggested resources

KM: Stick on the Maths: Percentage increases and decreases
KM: Maths to Infinity: FDPRP
KM: Percentage methods
NRICH: Would you rather?
NRICH: Keep it simple
NRICH: Egyptian fractions
NRICH: The greedy algorithm
NRICH: Fractions jigsaw
NRICH: Countdpwn fractions

Learning review

- www.diagnosticquestions.com

Prerequisites

- Add and subtract fractions with different denominators
- Add and subtract mixed numbers with different denominators
- Multiply a proper fraction by a proper fraction
- Divide a proper fraction by a whole number
- Simplify the answer to a calculation when appropriate
- Use non-calculator methods to find a percentage of an amount
- Convert between fractions, decimals and percentages

Bring on the Maths$^+$: Moving on up!
Fractions, decimals & percentages: #3, #4, #5
Ratio and proportion: #2

Mathematical language

Mixed number
Equivalent fraction
Simplify, cancel, lowest terms
Proper fraction, improper fraction, top-heavy fraction, vulgar fraction
Percent, percentage
Multiplier
Increase, decrease
Compound

Notation
Mixed number notation
Horizontal / diagonal bar for fractions

Agreed Common Teaching Approaches

It is important that pupils are clear that the methods for addition and subtraction of fractions are different to the methods for multiplication and subtraction. A fraction wall is useful to help 14isualize and re-present the calculations.
NCETM: The Bar Model
NCETM: Teaching fractions
NCETM: Fractions videos
NCETM: Glossary

Common approaches
When multiplying a decimal by a whole number pupils are taught to use the corresponding whole number calculation as a general strategy
When adding and subtracting mixed numbers pupils are taught to convert to improper fractions as a general strategy
Teachers use the horizontal fraction bar notation at all times

Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
• Show me a proper (improper) fraction. And another. And another. • Show me a mixed number fraction. And another. And another. • Jenny thinks that you can only multiply fractions if they have the same common denominator. Do you agree with Jenny? Explain your answer. • Benny thinks that you can only divide fractions if they have the same common denominator. Do you agree with Jenny? Explain. • Kenny thinks that $\frac{6}{10} \div \frac{3}{2} = \frac{2}{5}$.Do you agree with Kenny? Explain. • Always/Sometimes/Never: To reverse an increase of x%, you decrease by x% • Lenny calculates the % increase of £6 to £8 as 25%. Do you agree with Lenny? Explain your answer.		• Some pupils may think that you simply can simply add/subtract the whole number part of mixed numbers and add/subtract the fractional art of mixed numbers when adding/subtracting mixed numbers, e.g. $3\frac{1}{3} - 2\frac{1}{2} = 1\frac{-1}{6}$ • Some pupils may make multiplying fractions over complicated by applying the same process for adding and subtracting of finding common denominators. • Some pupils may think the multiplier for, say, a 20% decrease is 0.2 rather than 0.8 • Some pupils may think that percentage change = actual change ÷ new amount

Solving equations and inequalities	Stage 8*	6 hours

KNOWLEDGE

The Big Picture: Algebra progression map

- **solve linear equations in one unknown algebraically (ALSO 6*)**
- **solve linear equations with the unknown on both sides of the equation (ALSO 8*)**
- **solve linear inequalities in one variable**
- **represent the solution of an inequality on a number line**

Return to overview

SKILLS

- Choose the required inverse operation when solving an equation or inequality
- Identify the correct order of undoing the operations in an equation or inequality
- Solve one-step equations and inequalities when the solution is a whole number (fraction)
- Solve two-step equations and inequalities (including the use of brackets) when the solution is a whole number
- Solve two-step equations and inequalities (including the use of brackets) when the solution is a fraction
- Solve three-step equations and inequalities (including the use of brackets) when the solution is a whole number
- Solve three-step equations and inequalities (including the use of brackets) when the solution is a fraction
- Check the solution to an equation by substitution
- Know how to show a range of values that solve an inequality on a number line
- Know when to use an open and filled circle to represent a solution to an inequality on a number line

Suggested resources

KM: Spiders and snakes. The example is for an unknown on both sides but the same idea can be used.
NRICH: Inspector Remorse
NRICH: Quince, quonce, quance
NRICH: Weighing the baby

Learning review

- www.diagnosticquestions.com

Prerequisites

- Know the basic rules of algebraic notation
- Express missing number problems algebraically
- Solve missing number problems expressed algebraically

Bring on the Maths⁺: Moving on up!
Algebra: #2

Mathematical language

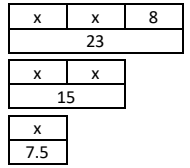
Algebra, algebraic, algebraically
Unknown
Equation
Operation
Solve
Solution
Brackets
Symbol
Substitute

Notation
The lower case and upper case of a letter should not be used interchangeably when worked with algebra
Juxtaposition is used in place of '×'. 2a is used rather than a2.
Division is written as a fraction

Agreed Common Teaching Approaches

This unit focuses on solving linear equations with unknowns on one side. Although linear equations with the unknown on both sides are addressed in Stage 8, pupils should be encouraged to think how to solve these equations by exploring the equivalent family of equations such as if 2x = 8 then 2x + 2 = 10, 2x – 3 = 5, 3x = x + 8, 3x + 2 = x + 10, etc.

Encourage pupils to re-present the equations such as 2x + 8 = 23 using the Bar Model.



NCETM: The Bar Model
NCETM: Algebra,
NCETM: Glossary

Common approaches

Pupils should explore solving equations by applying inverse operations, but the expectation is that all pupils should solve by balancing:

$2x + 8 = 23$
$-8 \quad -8$
$2x = 15$
$\div 2 \quad 2$
$x = 7.5$ (or $^{15}/_{2}$)

Pupils are expected to multiply out the brackets before solving an equation involving brackets. This makes the connection with two step equations such as 2x + 6 = 22

Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
• Show me an (one-step, two-step) equation with a solution of 14 (positive, fractional solution). And another. And another … • Kenny thinks if 6x = 3 then x = 2. Do you agree with Kenny? Explain • Jenny and Lenny are solving: 3(x – 2) = 51. Who is correct? Explain ***Jenny's solution*** *3(x – 2) = 15* *÷ 3 ÷ 3* *x – 2 = 5* *÷ 2 ÷ 2* *x = 7* ***Lenny's solution*** *3(x – 2) = 15* *Mulitplying out brackets* *3x – 6 = 15* *+2 +2* *3x = 21* *÷ 3 ÷ 3* *x = = 7*		• Some pupils may think that equations always need to be presented in the form ax + b = c rather than c = ax + b. • Some pupils may think that the solution to an equation is always positive and/or a whole number. • Some pupils may get the use the inverse operations in the wrong order, for example, to solve 2x + 18 = 38 the pupils divide by 2 first and then subtract 18.

Calculating space	Stage 8*	9 hours

KNOWLEDGE

The Big Picture: Measurement and mensuration progression map

- use standard units of measure and related concepts (length, area, volume/capacity)
- **calculate perimeters of 2D shapes (ALSO 6*)**
- **know and apply formulae to calculate area of triangles, parallelograms, trapezia**
- calculate surface area of cubes and cuboids
- calculate the surface area of a triangular prism when lengths are known
- **know and apply formulae to calculate volume of cuboids**
- **understand and use standard mathematical formulae**

Return to overview

SKILLS

- Recognise that the value of the perimeter can equal the value of area
- Use standard formulae for area and volume
- Find missing lengths in 2D shapes when the area is known
- Find the area and perimeter of squares, rectangles, parallelograms and triangles
- Find the area and perimeter of compound shapes
- Know that the area of a trapezium is given by the formula area = ½ × (a + b) × h = $\left(\frac{a+b}{2}\right)h = \frac{(a+b)h}{2}$
- Calculate the area of a trapezium
- Understand the meaning of surface area
- Find the surface area and volume of cuboids (including cubes) when lengths are known
- Find the surface area and volume of a triangular prism when lengths are known
- Find missing lengths in 3D shapes when the volume or surface area is known

Suggested resources

KM: Equable shapes (for both 2D and 3D shapes)
KM: Triangle takeaway
KM: Surface area
KM: Class of rice
KM: Stick on the Maths: Area and Volume
KM: Maths to Infinity: Area and Volume
NRICH: Can They Be Equal?

Learning review

- www.diagnosticquestions.com

Prerequisites

- Understand the meaning of area, perimeter, volume and capacity
- Know how to calculate areas of rectangles, parallelograms and triangles using the standard formulae
- Know that the area of a triangle is given by the formula area = ½ × base × height = base × height ÷ 2 = $\frac{bh}{2}$
- Know appropriate metric units for measuring area and volume

Bring on the Maths⁺: Moving on up!
Measures: #4, #5, #6

Mathematical language

Perimeter, area, volume, capacity, surface area
Square, rectangle, parallelogram, triangle, trapezium (trapezia)
Polygon
Cube, cuboid
Square 18isualize18, square 18isualize18, square metre, square 18isualize
Cubic 18isualize18, 18isualize18 cube
Formula, formulae
Length, breadth, depth, height, width

Notation
Abbreviations of units in the metric system: km, m, cm, mm, mm^2, cm^2, m^2, km^2, mm^3, cm^3, km^3

Agreed Common Teaching Approaches

Ensure that pupils make connections with the area and volume work in Stage 6 and below, in particular the importance of the perpendicular height.
NCETM: Glossary

Common approaches
Pupils have already derived the formula for the area of a parallelogram. They use this to derive the formula for the area of a trapezium as $\frac{(a+b)h}{2}$ by copying and rotating a trapezium as shown above.
Pupils use the area of a triangle as given by the formula area = $\frac{bh}{2}$.
Every classroom has a set of area posters on the wall.

Reasoning opportunities and probing questions

- Always / Sometimes / Never: The value of the volume of a cuboid is greater than the value of the surface area
- Convince me that the area of a triangle = ½ × base × height = base × height ÷ 2 = $\frac{bh}{2}$
- (Given a right-angled trapezium with base labelled 8 cm, height 5 cm, top 6 cm) Kenny uses the formula for the area of a trapezium and Benny splits the shape into a rectangle and a triangle. What would you do? Why?
- Find me a cuboid with a surface area of $120cm^2$

Cross Curricular Links

Possible misconceptions

- Some pupils may use the sloping height when finding the areas of parallelograms, triangles and trapezia
- Some pupils may think that the area of a triangle is found using area = base × height
- Some pupils may think that you multiply all the numbers to find the area of a shape
- Some pupils may confuse the concepts of surface area and volume
- Some pupils may only find the area of the three 'distinct' faces when finding surface area

Checking, approximating and estimating	Stage 8*	3 hours

KNOWLEDGE

The Big Picture: Number and Place Value progression map

- **round numbers and measures to an appropriate degree of accuracy (e.g. to a specified number of decimal places or significant figures)**
- **estimate answers; check calculations using approximation and estimation, including answers obtained using technology**
- **solve problems which require answers to be rounded to specified degrees of accuracy (NEW, ALSO 6*)**
- recognise and use relationships between operations, including inverse operations (e.g. cancellation to simplify calculations and expressions)

Return to overview

SKILLS

- Approximate by rounding to any number of decimal places or significant figures
- Know how to identify the first significant figure in any number
- Approximate by rounding to the first significant figure in any number
- Understand estimating as the process of finding a rough value of an answer or calculation
- Use estimation to predict the order of magnitude of the solution to a (decimal) calculation
- Estimate calculations by rounding numbers to one significant figure

Suggested resources

KM: Approximating calculations
KM: Stick on the Maths: CALC6: Checking solutions

Learning review

- KM: 7M6 BAM Task

Prerequisites

- Approximate any number by rounding to the nearest 10, 100 or 1000, 10 000, 100 000 or 1 000 000
- Approximate any number with one or two decimal places by rounding to the nearest whole number
- Approximate any number with two decimal places by rounding to the one decimal place
- Simplify a fraction by cancelling common factors

Mathematical language

Round
Decimal place
Check
Solution
Answer
Estimate (noun and verb)
Order of magnitude
Accurate, Accuracy
Significant figure
Cancel
Inverse
Operation

Notation

The approximately equal symbol (≈)
Significant figure is abbreviated to 's.f.' or 'sig fig'

Agreed Common Teaching Approaches

This unit is an opportunity to develop and practice calculation skills with a particular emphasis on checking, approximating or estimating the answer. Pupils should be able to estimate calculations involving integers and decimals.
Also see big pictures: Calculation progression map and Fractions, decimals and percentages progression map
NCETM: Glossary

Common approaches

All pupils are taught to 19isualize rounding through the use a number line

Reasoning opportunities and probing questions

- Convince me that 39 652 rounds to 40 000 to one significant figure
- Convince me that 0.6427 does not round to 1 to one significant figure
- What is wrong: $\frac{11 \times 28.2}{0.54} \approx \frac{10 \times 30}{0.5} = 150$. How can you correct it?

Cross Curricular Links

Possible misconceptions

- Some pupils may truncate instead of round
- Some pupils may round down at the half way point, rather than round up.
- Some pupils may think that a number between 0 and 1 rounds to 0 or 1 to one significant figure
- Some pupils may divide by 2 when the denominator of an estimated calculation is 0.5

Mathematical movement	Stage 8*	6 hours

KNOWLEDGE

The Big Picture: Position and direction progression map

- work with coordinates in all four quadrants
- ***understand and use lines parallel to the axes, y = x and y = -x***
- **plot graphs of equations that correspond to straight-line graphs in the coordinate plane (NEW)**
- **solve geometrical problems on coordinate axes**
- **identify, describe and construct congruent shapes including on coordinate axes, by considering rotation, reflection and translation**
- **describe translations as 2D vectors (ALSO 6*)**

Return to overview

SKILLS

- Plot co-ordinates in all four quadrants
- Draw axis and scale them correctly
- Write the equation of a line parallel to the x-axis or the y-axis
- Draw a line parallel to the x-axis or the y-axis given its equation
- Identify the lines y = x and y = -x
- Draw the lines y = x and y = -x
- Draw simple straight lines e.g. y = 2x + 1
- Carry out a reflection in a given equation (e.g. y = 3 and y = x)
- Find and name the equation of the mirror line for a given reflection
- Describe a translation as a 2D vector
- Carry out a translation using a vector
- Understand the concept and language of rotations
- Describe a rotation using a centre, a direction and an angle of turn
- Carry out a rotation using a given angle, direction and centre of rotation
- Describe a rotation using mathematical language

Translation, Reflection, Rotation
Transformation
Object, Image
Congruent, congruence
Mirror line
Vector
Centre of rotation

Notation
Cartesian coordinates should be separated by a comma and enclosed in brackets (x, y)
Vector notation $\begin{pmatrix} a \\ b \end{pmatrix}$ where a = movement right and b = movement up

Agreed Common Teaching Approaches

Pupils should be able to use a centre of rotation that is outside, inside, or on the edge of the object
Pupils should be encouraged to see the line x = a as the complete (and infinite) set of points such that the x-coordinate is a.
The French mathematician Rene Descartes introduced Cartesian coordinates in the 17th century. It is said that he thought of the idea while watching a fly moving around on his bedroom ceiling.
NCETM: Glossary

Common approaches
Pupils use ICT to explore these transformations
Teachers do not use the phrase 'along the corridor and up the stairs' as it can encourage a mentality of only working in the first quadrant. Later, pupils will have to use coordinates in all four quadrants. A more helpful way to remember the order of coordinates is 'x is a cross, wise up!'
Teachers use the language 'negative number', and not 'minus number', to avoid future confusion with calculations.

Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
• Always / Sometimes / Never: The centre of rotation is in the centre of the object • Convince me that y = 0 is the x-axis • Always / Sometimes / Never: The line x = a is parallel to the x-axis		• Some pupils will wrestle with the idea that a line x = a is parallel to the y-axis • When describing or carrying out a translation, some pupils may count the squares between the two shapes rather than the squares that describe the movement between the two shapes. • When reflecting a shape in a diagonal mirror line some students may draw a translation • Some pupils may think that the centre of rotation is always in the centre of the shape • Some pupils will confuse the order of x- and y-coordinates • When constructing axes, some pupils may not realise the importance of equal divisions on the axes

Understanding risk I	Stage 8*	*3 hours*

KNOWLEDGE

The Big Picture: Probability progression map

- **relate relative expected frequencies to theoretical probability, using appropriate language and the 0 – 1 probability scale (ALSO 6*)**
- **record describe and analyse the frequency of outcomes of probability experiments using tables and frequency trees (ALSO 8*)**
- **construct theoretical possibility spaces for single and combined experiments with equally likely outcomes and use these to calculate theoretical probabilities**
- **apply the property that the probabilities of an exhaustive set of outcomes sum to one (ALSO 6*)**
- **apply ideas of randomness, fairness and equally likely events to calculate expected outcomes of multiple future experiments (NEW)**

SKILLS

- Know that probability is a way of measuring likeliness and know and use the vocabulary of probability
- Understand the use of the 0-1 scale to measure probability (FDP)
- Assess likeliness and place events on a probability scale
- List all the outcomes for an experiment
- Identify equally likely outcomes
- Use sample spaces to work out theoretical probabilities for events with equally likely outcomes
- Recognise when it is not possible to work out a theoretical probability for an event
- Know that the sum of probabilities for all outcomes is 1
- Apply the fact that the sum of probabilities for all outcomes is 1
- Calculate expected outcomes of future experiments with equally likely events
- Use a tree diagram to calculate the probability of two events

Suggested resources

KM: Probability scale and slideshow version
KM: Probability loop cards
NRICH: Dice and spinners interactive

Learning review

- www.diagnosticquestions.com

Prerequisites

- Understand the equivalence between fractions, decimals and percentages
- Compare fractions, decimals or percentages
- Simplify a fraction by cancelling common factors

Mathematical language

Probability, Theoretical probability
Event
Outcome
Impossible, Unlikely, Evens chance, Likely, Certain
Equally likely
Mutually exclusive
Exhaustive
Possibility space
Experiment

Notation
Probabilities are expressed as fractions, decimals or percentage. They should not be expressed as ratios (which represent odds) or as words

Agreed Common Teaching Approaches

It is not immediately apparent how to use words to label the middle of the probability scale. 'Evens chance' is a common way to do so, although this can be misleading as it could be argued that there is an even chance of obtaining any number when rolling a fair die.
NRICH: Introducing probability
NRICH: Why Do People Find Probability Unintuitive and Difficult?
NCETM: Glossary

Common approaches
Every classroom has a display of a probability scale labeled with words and numbers. Pupils create events and outcomes that are placed on this scale.

Reasoning opportunities and probing questions

- Show me an example of an event and outcome with a probability of 0. And another. And another…
- Always / Sometimes / Never: if I pick a card from a pack of playing cards then the probability of picking a club is ¼
- Label this (eight-sided) spinner so that the probability of scoring a 2 is ¼.

Cross Curricular Links

Possible misconceptions

- Some pupils will initially think that, for example, the probability of it raining tomorrow is ½ as it either will or it won't.
- Some students may write a probability as odds (e.g. 1:6 or '1 to 6'). There is a difference between probability and odds, and therefore probabilities must only be written as fractions, decimals or percentages.
- Some pupils may think that, for example, if they flip a fair coin three times and obtain three heads, then it must be more than likely they will obtain a head next.

Presentation of data	Stage 8*	6 hours

KNOWLEDGE **The Big Picture**: Statistics progression map

- **interpret and construct tables, charts and diagrams, including frequency tables, bar charts, frequency diagrams, pie charts and pictograms for categorical data, vertical line charts for ungrouped discrete numerical data and know their appropriate use**

Return to overview

SKILLS

- Know the meaning of categorical and numerical data
- Know the meaning of discrete and continuous data
- Interpret and construct frequency tables
- Construct and interpret pictograms (bar charts, tables) and know their appropriate use
- Construct and interpret comparative bar charts
- Interpret pie charts and know their appropriate use
- Construct pie charts when the total frequency is not a factor of 360
- Choose appropriate graphs or charts to represent data
- Construct and interpret vertical line charts

Suggested resources

KM: Maths to Infinity: Averages, Charts and Tables
NRICH: Picturing the World
NRICH: Charting Success

Learning review

- www.diagnosticquestions.com

Prerequisites

- Construct and interpret a pictogram
- Construct and interpret a bar chart
- Construct and interpret a line graph
- Understand that pie charts are used to show proportions
- Use a template to construct a pie chart by scaling frequencies

Bring on the Maths*: Moving on up!
Statistics: #1, #2, #3

Mathematical language

Data, Categorical data, Discrete data
Pictogram, Symbol, Key
Frequency
Table, Frequency table
Tally
Bar chart
Time graph, Time series
Bar-line graph, Vertical line chart
Scale, Graph
Axis, axes
Line graph
Pie chart
Sector
Angle
Maximum, minimum

Notation
When tallying, groups of five are created by striking through each group of four

Agreed Common Teaching Approaches

In stage 6 pupils constructed pie charts when the total of frequencies is a factor of 360. More complex cases can now be introduced.
Much of the content of this unit has been covered previously in different stages. This is an opportunity to bring together the full range of skills encountered up to this point, and to develop a more refined understanding of usage and vocabulary.

William Playfair, a Scottish engineer and economist, introduced the bar chart and line graph in 1786. He also introduced the pie chart in 1801.
NCETM: Glossary

Common approaches
Pie charts are constructed by calculating the angle for each section by dividing 360 by the total frequency and not using percentages.
The angle for the first section is measured from a vertical radius.
Subsequent sections are measured using the boundary line of the previous section.

Reasoning opportunities and probing questions

- Show me a pie chart representing the following information: Blue (30%), Red (50%), Yellow (the rest). And another. And another.
- Always / Sometimes / Never: Bar charts are vertical
- Always / Sometimes / Never: Bar charts, pie charts, pictograms and vertical line charts can be used to represent any data
- Kenny says 'If two pie charts have the same section then the amount of data the section represents is the same in each pie chart.' Do you agree with Kenny? Explain your answer.

Cross Curricular Links

Possible misconceptions

- Some pupils may think that a line graph is appropriate for discrete data
- Some pupils may think that each square on the grid used represents one unit
- Some pupils may confuse the fact that the sections of the pie chart total 100% and 360°
- Some pupils may not leave gaps between the bars of a bar chart

Measuring data	Stage 8*	3 hours

KNOWLEDGE **The Big Picture**: Statistics progression map

- **Interpret, analyse and compare the distributions of data sets from univariate empirical distributions through appropriate measures of central tendency (median, mean and mode) and spread (range) (ALSO 6*)**

Return to overview

SKILLS	SUGGESTED RESOURCES
• Investigate averages • Explore ways of summarising data • Analyse and compare sets of data • Understand the mode and median as measures of typicality (or location) • Find the mode of set of data • Find the median of a set of data • Find the median of a set of data when there are an even number of numbers in the data set • Use the mean to find a missing number in a set of data • Calculate the mean from a frequency table • Find the mode from a frequency table • Find the median from a frequency table • Understand the range as a measure of spread (or consistency) • Calculate the range of a set of data • Analyse and compare sets of data • Appreciate the limitations of different statistics (mean, median, mode, range)	•

Prerequisites	Mathematical language	Pedagogical notes
• Understand the meaning of 'average' as a typicality (or location) • Calculate the mean of a set of data **Bring on the Maths+: Moving on up!** Statistics: #4	Average Spread Consistency Mean Median Mode Range Measure Data Statistic Statistics Approximate Round	The word 'average' is often used synonymously with the mean, but it is only one type of average. In fact, there are several different types of mean (the one in this unit properly being named as the 'arithmetic mean'). NCETM: Glossary **Common approaches** *Every classroom has a set of statistics posters on the wall* *Always use brackets when writing out the calculation for a mean, e.g. (2 + 3 + 4 + 5) ÷ 4 = 14 ÷ 4 = 3.5*

Reasoning opportunities and probing questions	Suggested resources	Possible misconceptions
• Show me a set of data with a mean (mode, median, range) of 5. • Always / Sometimes / Never: The mean is greater than the mode for a set of data • Always / Sometimes / Never: The mean is greater than the median for a set of data • Convince me that a set of data could have more than one mode. • What's the same and what's different: mean, mode, median, range?	KM: Maths to Infinity: Averages KM: Maths to Infinity: Averages, Charts and Tables KM: Stick on the Maths HD4: Averages NRICH: M, M and M NRICH: The Wisdom of the Crowd **Learning review** www.diagnosticquestions.com	• If using a calculator some pupils may not use the '=' symbol (or brackets) correctly; e.g. working out the mean of 2, 3, 4 and 5 as 2 + 3 + 4 + 5 ÷ 4 = 10.25. • Some pupils may think that the range is a type of average • Some pupils may think that a set of data with an even number of items has two values for the median, e.g. 2, 4, 5, 6, 7, 8 has a median of 5 and 6 rather than 5.5 • Some pupils may not write the data in order before finding the median.
