Bolton Impact Trust, Park School Science Curriculum

Rationale

As a Trust, we believe that a high quality Science education provides a foundation for understanding the world through the specific disciplines of biology, chemistry and physics. Pupils will gain an understanding and appreciation of the ways in which science has shaped our world and the importance that science has on the world's future prosperity. Pupils will learn to think as a scientist and will develop a curiosity and interest in how science can be used to understand, analyse and predict the world we live in.

Knowledge

We ensure that throughout the Science curriculum pupils acquire the key knowledge required to:

- Understand the specific disciplines of biology, chemistry and physics
- Develop an understanding of the nature, processes and methods of science through different types of science enquiries that help them to answer scientific questions about the world around them
- Understand the uses and implications of science, today and for the future

Character

We ensure that pupils develop their own character attributes by understanding the impact that they have upon the world around them, and the responsibilities that they have as an individual but also as part of the wider society to protect their world. We encourage pupils to take part in ethical discussions and to be open and empathic to alternative viewpoints.

Creativity

We ensure that pupils value and develop their own creativity by sharing with them the inventions, innovations and discoveries which science has made through individuals being creative in their thinking; and by doing so, have had a profound impact upon the world and our understanding of it.

Innovative Thinking

We inspire pupils to think scientifically. To understand the importance of objectivity, accuracy, precision, repeatability and reproducibility. To evaluate risks and to understand that methods and theories develop over time as new evidence and ideas are taken into account. We encourage pupils to be curious about the world and to ask questions, to develop a passion for investigation and research and to analyse and make predictions about the world we live in.

Transform

Pupils will transform the essential knowledge and skills that they are taught in the Science curriculum into long-lasting success in the world of further study and work. They will be equipped with a wide range of transferable skills such as problem solving, practical and numerical skills, enquiry and reasoned debate, analytical skills, scientific literacy and teamwork. Pupils will be exposed to, and will appreciate the myriad of opportunities for scientists in the modern world; particularly in the fields of health, medicine, transport, defence and security.

Science Curriculum Design

The Science curriculum has been carefully planned and sequenced so that knowledge builds upon prior knowledge and as pupils move through the academic year and the various pathways, knowledge and understanding is deepened and regularly revisited. Our curriculum topics are planned in a way which ensures that our pupils can learn the most important key component knowledge at both key stages which build in depth and level of challenge for each term that they are with us. Knowledge and skills are repeated regularly to enable pupils to retrieve prior learning regularly, to increase their confidence, and to address the needs of the pupils who join us throughout the year and with vastly different abilities and experiences of the Science curriculum prior to joining us. Pupils who leave us to return to mainstream are able to re-engage with the Science curriculum there.

At Park school, Science is taught in small groups of up to 8 pupils by a specialist science teacher. The small class size provides a safe and nurturing environment where pupils can learn about challenging or sensitive topics such as health and diseases, human reproduction and contraception. Students may wish to speak to a member of staff about a topic being covered during the lesson, or need additional support in managing their emotions, so the role of the Learning Mentor is particularly important in science lessons.

The science offer at Park School consists of five timetabled 45 minute lessons per week. In addition, there are opportunities for teacher-led discussion of key themes during form time, as well as through the wider curriculum; particularly in PSHE and Geography. As well as giving pupils the opportunity to revisit and consolidate their learning, this also allows staff to support and advise our more vulnerable students, with areas of particular concern that arise through the school year. For example, staff may become aware particular risks to pupil physical or sexual health, which can then be addressed in a factual but supportive way. During the summer months, students may be advised on water safety and keeping themselves safe outdoors. Form time discussion in Park School is also used to facilitate Pupil Voice, giving students the opportunity to express concerns, or request additional advice on matters relating to their science learning. These would then be addressed in science lessons, as well as contributing to future curriculum planning.

At Park School, there is a cross curricular approach to science teaching. In PSHE, students are taught about healthy lifestyles, the importance of a balanced diet and regular exercise, and the effects of drugs on health. Students further develop their knowledge of immunisation, vaccination, use of antibiotics, ethics of drug testing as well as the ethical and spiritual arguments related to organ transplants. Consideration is given to the cultural and spiritual background of our young people when delivering the science curriculum. There are opportunities to address certain elements in smaller groups, or 1:1 where appropriate, in order to respect cultural identities.

Students at Park School have the opportunity to compete First Aid training, including giving CPR, which has strong links to the biology curriculum. Students continue their science learning outside the classroom, carrying out sampling and fieldwork in the nearby park. Guest speakers have also supported the delivery of the science curriculum, with recent presentations by NHS health practitioners.

Students at Park School develop their cultural capital through appreciation of the history of science. The curriculum highlights the impact of our greatest thinkers and how scientists such as Galileo, van Helmont and Darwin took great personal risks to challenge current thinking and advance our knowledge of the natural world. Pupils are also taught about the ground-breaking work done by black and female scientists such as Rosalind Franklin, Marie Curie and Maggie Aderin-Pocock. Pupils also develop their understanding of a broad range of careers in science.

Science lessons are planned to promote reading a range of non-fiction texts linked to key science themes, including leaflets on animal testing, gene therapy and genetic modification, contraception, STIs, alcohol misuse, posters on healthy lifestyles, and text books exploring particular topics. There are also opportunities to make thematic links to fiction texts explored in English lessons. These explore issues such as race, gender identity, animal rights and relationships. As well as developing oral and debating skills, students can share views and opinions they are developing; promoting confidence and engagement in their learning.

The Key Stage 3 Science Curriculum

In key stage 3 we have used the syllabus from AQA to inform our planning. This syllabus provides an alternative approach to KS3 content. Content is under 10 big idea headings: Forces, Electromagnetism, Energy, Waves, Matter, Reactions, Earth, Organisms, Ecosystems and Genes. Each idea contains four smaller topics: the building blocks for the big ideas. This sequence of knowledge leads to pupils developing their understanding of a big idea by beginning with simpler, more concrete topics and moving to more abstract ones as they work through the curriculum. This way of sequencing knowledge helps pupils to secure key knowledge that they can then apply to less familiar topics. We have chosen to deliver the units by starting with chemistry because this provides pupils with prerequisite knowledge of atoms as the building blocks of all living things, and how atoms react during chemical reactions that are essential for life. When planning the curriculum we have been explicit in outlining not only what pupils will **know**, but also how they will **apply** this knowledge. The AQA syllabus ensures that pupils are encouraged to think like a scientist by including opportunities for pupils to analyse, communicate, enquire and solve in every topic. We also ensure that pupils can access the science curriculum by ensuring that key subject specific vocabulary is identified and explicitly taught in every unit.

Our science curriculum covers the core knowledge and enquiry processes from each of the 10 big ideas over one academic year. Each big idea is introduced and delivered over 3-4 weeks. The knowledge and skills build in complexity and depth throughout the weeks and through personalisation every pupil is given work which challenges them and builds upon their existing knowledge. If a pupil remains our setting for more than one academic year, then they will begin the cycle again in their fourth term, but through personalisation will build upon the knowledge that they had previously acquired.

This approach means that pupils in our setting will gain substantive knowledge across the breadth of the key stage 3 science curriculum which they can build upon on their return to mainstream, and which will mean that they are able to access the key stage 4 science curriculum.

Science Key Stage 3 Intent

Science Key Stage 3 Curriculum	Autumn		Sp	ring	Summer	
			-			
	Half Term 1	Half Term 2	Half Term 1	Half Term 2	Half Term 1	Half Term 2
	Introduction to science Matter Particle Model Separating Mixtures Periodic Table Elements Metals & Non-metals Reactions Chemical changes Acids and Alkalis Science careers	Reactions cont'd Chemical Energy Types of reaction Earth Earth Structure Universe Climate Earth Resources	Forces Speed Gravity Contact Forces Pressure Electromagnets Voltage and resistance Current Magnetism & electromagnets	Energy Energy Costs Energy Transfer Work Heating and cooling Waves Sound Light Wave effects Wave properties	Organisms Movement Cells Breathing Digestion Ecosystem Interdependence Plant reproduction	Bioenergetics Respiration Photosynthesis Genes Human Reproduction Inheritance Variation and evolution

In order to help teachers to deliver the key stage 3 science curriculum at an appropriate level to pupils, we have produced a guide to the key substantive knowledge and disciplinary knowledge that pupils should be taught depending upon their prior knowledge and their ability. Each topic has been broken down into 4 levels:

- Foundation Knowledge Block
- Knowledge Block 1
- Knowledge Block 2
- Knowledge Block 3

Each Knowledge Block reflects the complexity of the knowledge that should be delivered. There is no limit on how quickly pupils move through these blocks during the teaching of the topic. A pupil may begin at the Foundation Knowledge Block and move through all 4, or may begin at Knowledge Block 3 and move to Knowledge Block 4. The teaching will adapt to suit the needs of the pupils as they learn. Any pupil with us for longer than a year, will begin a topic at the

level that they reached the year before and build from there. If a pupil knows all the knowledge from a particular unit up to Knowledge Block 3, our personalised approach allows us to move onto another topic or to build onto other topics where their knowledge is at a lower level.

Matter		Foundation Knowledge Block	Knowledge Block 1 →	Knowledge Block 2	Knowledge Block 3 →
Particle Model	Substantive Knowledge	That everything is made of tiny particles called atoms The three states of matter & examples	As previous levels, plus: The particle model of solids, liquids and gases The properties of the different states of matter in terms of the particle model - differences in arrangements, motion closeness of particles explaining changes of state, shape and density	As previous levels, plus: Changes of state in terms of the particle model Diffusion in terms of the particle model Changes with temperature in motion and spacing of particles	As previous levels, plus: Properties of states of matter including expansion, contraction and gas pressure The anomaly of ice-water transition (increase in volume when water freezes) Internal energy stored in materials
	Disciplinary Knowledge	Interpret observations to draw conclusions Understand and use SI units	Understand that scientific methods and theories develop as earlier explanations are modified to take account of new evidence and ideas	Make predictions using scientific knowledge and understanding Interpret observations and data, including identifying patterns and using observations, measurements and data to draw conclusions	Identify further questions arising from results
Separating Mixtures	Substantive Knowledge	Mixtures, including dissolving & basic	As previous levels, plus:	As previous levels, plus: Diffusion in terms of the particle model	As previous levels, plus:

		vocabulary (dissolve & solution) Simple separating techniques - filtration only	Dissolving & key vocabulary (solute & solvent) The concept of a pure substance Separating techniques - filtration & evaporation	Separating techniques - distillation and chromatography	Identification of pure substances in terms of melting & boiling points
	Disciplinary Knowledge	Interpret observations to draw conclusions use appropriate techniques, apparatus, and materials, paying attention to health and safety	Understand that scientific methods develop to take account of new ideas	Make predictions using scientific knowledge Interpret observations and data, including identifying patterns	Identify further questions arising from results
Periodic Table	Substantive Knowledge	The Periodic Table is organised into groups; metals and non-metals Basic physical and chemical properties of some elements	As previous levels, plus: The Periodic Table is organised into Periods and groups; metals and non-metals	As previous levels, plus: How patterns in reactions can be predicted with reference to the Periodic Table	As previous levels, plus: The principles underpinning the Mendeleev Periodic Table – how Mendeleev left gaps and could make predictions on the properties unknown elements
	Disciplinary Knowledge	Understand that scientific t explanations are modified t evidence	•	Make predictions using science	entific knowledge
Elements	Substantive Knowledge		As previous levels, plus:	As previous levels, plus:	As previous levels, plus:

	Identifying atoms, elements, molecules and compounds from simple particle diagrams Building simple models	Describe differences between atoms, elements and compounds – scientific definitions	Describe a simple (Dalton) atomic model	Write chemical symbols and formulae for elements and compounds
Disciplinary Knowledge	Understand that scientific to explanations are modified to evidence and ideas	•	Ask questions and develop a line of enquiry based on observations of the real world, alongside prior knowledge	Use and derive simple equations Make predictions using scientific knowledge and understanding

Reactions		Foundation Knowledge Block	Knowledge Block 1	Knowledge Block 2	Knowledge Block 3
Metals and non-metals	Substantive Knowledge	Physical properties of metals and non-metals	As previous levels, plus: Chemical properties of metals and non-metals	As previous levels, plus: Chemical properties of metal and non-metal oxides	As previous levels, plus: Chemical properties of metal and non-metal oxides with respect to acidity
	Disciplinary Knowledge	· ·	p a line of enquiry based on one one using scientific knowledge	l observations of the real world ge and understanding	l d, alongside prior
Acids and Alkalis	Substantive Knowledge	Identifying common examples of acids and alkalis The pH scale for measuring	As previous levels, plus: Reactions of acids with metals to produce a salt plus hydrogen	As previous levels, plus: Neutralisation reactions as reactions of acids with alkalis to produce a salt plus water	As previous levels, plus: Simple chemical equations for Neutralisation reactions

		acidity/alkalinity; and indicators Identify hazard symbols and some safety precautions when working with acids & alkalis	How to test a gas for Hydrogen Simple word equations for acid + metal reactions	Simple word equations for Neutralisation reactions Simple chemical equations for acid + metal reactions	
	Disciplinary Knowledge	Use appropriate techniques, apparatus, and materials during laboratory work, paying attention to health and safety	Make and record observations and evaluate the reliability of methods	Use and derive simple equations Make predictions using scientific knowledge and understanding	Ask questions based on observations of the real world, alongside prior knowledge
Chemical Energy	Substantive Knowledge			Energy changes on changes of state (qualitative)	As previous levels, plus: Exothermic and endothermic chemical reactions (qualitative)
	Disciplinary Knowledge			Ask questions based on obworld, alongside prior know	
Types of reaction	Substantive Knowledge	Difference between chemical reactions and physical changes Identifying reactants and products in a simple reaction	As previous levels, plus: Chemical reactions as the rearrangement of atoms (reactants) to form products Representing chemical reactions using simple word equations	As previous levels, plus: Representing chemical reactions using formulae in equations Conservation of mass in chemical reactions Thermal decomposition and oxidation reactions	As previous levels, plus: Balancing simple chemical equations Displacement reactions Role of catalysts in chemical reactions and importance in industry

		Combustion reactions	The order of metals and carbon in the reactivity series	The use of carbon in obtaining metals from metal oxides Properties of ceramics,
Disciplinary Knowledge	Use appropriate techniques, apparatus, and materials during laboratory work, paying attention to health and safety	Make and record observations and measurements using a range of methods for different investigations; and evaluate the reliability of methods and suggest possible improvements	Use and derive simple equations Make predictions using scientific knowledge and understanding	Ask questions based on observations of the real world, alongside prior knowledge

Earth		Foundation Knowledge Block	Knowledge Block 1	Knowledge Block 2	Knowledge Block 3	
Earth Structure	Substantive Knowledge		As previous levels, plus:	As previous levels, plus:	As previous levels, plus:	
		The 4 part structure of the Earth	The composition of the Earth in terms of elements e.g. Iron & Nickel	The rock cycle and the formation of igneous, sedimentary and metamorphic rocks	Basic idea of plate tectonics (Geography curriculum link)	
	Disciplinary Knowledge		Understand that scientific theories develop as earlier explanations are modified to take account of new evidence			
Universe	Substantive Knowledge		As previous levels, plus:	As previous levels, plus:	As previous levels, plus:	
		The scale of the Universe	The seasons and the Earth's tilt, day length at	Gravity force (weight) = mass x gravitational field	The light year as a unit of astronomical distance -	

		The structure of the solar system Earth's rotation and days length. Earth's orbit around the Sun and year length – leap years Our Sun as a star, other stars in our galaxy, other galaxies	different times of year, in different hemispheres Gravity different on other planets and stars; gravity forces between Earth and Moon, and between Earth and Sun (qualitative only)	strength (g), on Earth g=10 N/kg,	mathematical conversion to km
	Disciplinary Knowledge	Understand that scientific the explanations are modified the evidence and ideas		Apply mathematical concepts and calculate results. Understand and use SI units Present observations and data using tables and graphs	Interpret observations and data, including identifying patterns and using observations, to draw conclusions. Present explanations in relation to predictions and hypotheses
Climate	Substantive Knowledge		As previous levels, plus: Composition of the atmosphere	As previous levels, plus: The evolution of Earth's atmosphere The production of carbon dioxide by human activity and the predicted impact on climate	As previous levels, plus: The carbon cycle Consequences of climate change The integrity of scientific data on climate change and human impact
	Disciplinary Knowledge		Understand that scientific t take account of new evider The importance of publishing		kplanations are modified to
Earth's Resources	Substantive Knowledge		As previous levels, plus:	As previous levels, plus:	As previous levels, plus:

	Earth as a source of useful resources	Earth's resources are limited Sustainability and the importance of recycling. Problems with using plastics	Consequences of dependence on fossils fuels and overuse of plastics	The efficacy of recycling – is it working?
Disciplinary Knowledge	Understand and use SI units Present observations and data using tables and graphs	Apply mathematical concepts and calculate results	Make predictions using scientific knowledge	Ask questions based on observations and prior knowledge

Forces		Foundation Knowledge Block	Knowledge Block 1 →	Knowledge Block 2	Knowledge Block 3 →
Speed	Substantive Knowledge	Relative speed of fast & slow objects – exploring the meaning of speed	As previous levels, plus: The quantitative relationship between average speed, distance and time (speed = distance ÷ time) & correct units	As previous levels, plus: The representation of a journey on a distance-time graph Forces being needed to cause objects to stop or start moving, or to change their speed or direction of motion (qualitative only) Change in motion depending on direction of force and its size	As previous levels, plus: Acceleration as the change in speed over time & correct units

	Disciplinary Knowledge	Understand and use SI units Present observations and data using tables and graphs	Apply mathematical concepts and calculate results	Make predictions using scientific knowledge	Ask questions based on observations and prior knowledge
Gravity	Substantive Knowledge	How gravity was discovered	As previous levels, plus: Gravity different on other planets and stars; gravity forces between Earth and Moon, and between Earth and Sun (qualitative only)	As previous levels, plus: Gravity force (weight) = mass x gravitational field strength (g), on Earth g=10 N/kg	As previous levels, plus: The nature of gravity as a very weak force, yet one which we experience daily How gravitational force changes with distance (inverse-square law)
	Disciplinary Knowledge	Understand that scientific theories develop as earlier explanations are modified to take account of new evidence and ideas	The importance of publishing results and peer review	Understand and use SI units. Present observations and data using tables and graphs. Apply mathematical concepts and calculate results. Make predictions using scientific knowledge	Ask questions based on observations and prior knowledge
Contact Forces	Substantive Knowledge	Forces as pushes or pulls, arising from the interaction between two objects	As previous levels, plus: Resistance to motion of air and water Balanced and unbalanced forces Non-contact forces: gravity forces acting at a	As previous levels, plus: Measurements of stretch or compression as force is changed Opposing forces and equilibrium: weight held by stretched spring or	As previous levels, plus: Moment as the turning effect of a force Force-extension linear relation; Hooke's Law as a special case

		Using force arrows in diagrams, adding forces in one dimension deforming objects; stretching and squashing a spring Friction between surfaces Forces measured in newtons	distance on Earth and in space, forces between magnets and forces due to static electricity	supported on a compressed surface	Work done and energy changes on deformation	
	Disciplinary Knowledge	Use SI units. Present data using tables and graphs.	Make and record observations Make predictions using scientific knowledge	of scientific enquiries to test identifying independent, de variables Use appropriate technique	ependent and control s, apparatus, and materials ying attention to health and ments. Evaluate the suggest improvements	
Pressure	Substantive Knowledge	Floating and sinking	As previous levels, plus: Pressure in liquids, increases with depth; upthrust effects	As previous levels, plus: Atmospheric pressure, decreases with increase of height	As previous levels, plus: Pressure as force over area – acting normal to any surface	
	Disciplinary Knowledge	Use SI units. Present data using tables and graphs		d observations. Make predictions using scientific knowledge. ical concepts and calculate results.		

Electromagnets		Foundation Knowledge Block	Knowledge Block 1 →	Knowledge Block 2 →	Knowledge Block 3 →
Voltage and resistance	Substantive Knowledge		Potential difference, measured in volts	As previous levels, plus: Separation of positive or negative charges when objects are rubbed together: transfer of electrons, forces between charged objects The idea of electric field, forces acting across the space between objects not in contact	As previous levels, plus: Battery and bulb ratings; resistance, measured in ohms, as the ratio of potential difference (p.d.) to current Differences in resistance between conducting and insulating components (quantitative)
	Disciplinary Knowledge		Use SI units. Make and record observations	Ask questions based on observations and prior knowledge	Make predictions using scientific knowledge
Current	Substantive Knowledge		Electric current, measured in amperes, in circuits	As previous levels, plus: Series and parallel circuits, currents add where branches meet and current as flow of charge	As previous levels, plus:
	Disciplinary Knowledge		Use SI units. Make and record observations	Ask questions based on observations and prior knowledge	Make predictions using scientific knowledge

Magnetism &	Substantive Knowledge		As previous levels, plus:	As previous levels, plus:	As previous levels, plus:
electromagnets		Magnetic poles, attraction and repulsion	Magnetic fields - plotting with compass, representation by field lines	Earth's magnetism, compass and navigation The magnetic effect of a current	Electromagnets, D.C. motors (principles only). Other effects of magnetic fields – Aurora borealis
	Disciplinary Knowledge	Understand that scientific t explanations are modified t evidence and ideas	•	Ask questions based on observations and prior knowledge	Make predictions using scientific knowledge

Energy		Foundation Knowledge Block	Knowledge Block 1 →	Knowledge Block 2	Knowledge Block 3 →
Energy Costs	Substantive Knowledge		As previous levels, plus: Fuels and energy resources	As previous levels, plus: Domestic fuel bills, fuel use and costs	As previous levels, plus: Comparing amounts of energy transferred (J, kJ, kW hour)
	Disciplinary Knowledge		Ask questions based on observations and prior knowledge		Use SI units. Apply mathematical concepts and calculate results
Energy Transfer	Substantive Knowledge	Comparing energy values of different foods (from labels) (kJ)	As previous levels, plus: Comparing power ratings of appliances in watts (W, kW)	As previous levels, plus: Other processes that involve energy transfer: changing motion, dropping an object, completing an electrical	As previous levels, plus: Simple machines give bigger force at the expense of smaller movement (vice versa):

			Energy as a quantity that can be quantified and calculated; the total energy has the same value before and after a change	circuit, stretching a spring, metabolism of food, burning fuels	product of force and displacement unchanged
	Disciplinary Knowledge	Use SI units. Present data using tables and graphs	Apply mathematical concepts and calculate results	Ask questions based on observations of the real world, using prior knowledge	Make predictions using scientific knowledge
Work	Substantive Knowledge				Work done as energy transferred (J)
	Disciplinary Knowledge				Use SI units. Apply mathematical concepts and calculate results
Heating and Cooling	Substantive Knowledge		Temperature difference between two objects leading to energy transfer from the hotter to the cooler one	As previous levels, plus: Heating and thermal equilibrium: through contact (conduction) or radiation; such transfers tending to reduce the temperature difference: use of insulators	As previous levels, plus: Comparing the starting with the final conditions of a system and describing increases and decreases in the amounts of energy associated with movements, temperatures, changes in positions in a field, in elastic distortions and in chemical compositions

Disciplinary Knowledge	Ap	apply mathematical	Ask questions based on	Make predictions using
	co	oncepts and calculate	observations of the world,	scientific knowledge
	re	esults	using prior knowledge	

Waves		Foundation Knowledge Block	Knowledge Block 1	Knowledge Block 2 →	Knowledge Block 3 →
Sound	Substantive Knowledge	Sound produced by vibrations of objects	As previous levels, plus: Sound needs a medium to travel, the speed of sound in air, in water, in solids	As previous levels, plus: Frequencies of sound waves, measured in hertz (Hz); echoes, reflection and absorption of sound	As previous levels, plus: Auditory range of humans and animals
	Disciplinary Knowledge	Ask questions based on observations and prior knowledge	Apply mathematical concepts. Use SI units.	Present data using tables a	l and graphs
Light	Substantive Knowledge	Light travels in straight lines – simple ray model to explain shadows	As previous levels, plus: Use of ray model to explain imaging in mirrors, the pinhole camera, the refraction of light and action of convex lens in focusing (qualitative); the human eye Similarities and differences between light waves and waves in matter	As previous levels, plus: Light waves travel through a vacuum; speed of light Light transferring energy from source to absorber leading to chemical and electrical effects; photo- sensitive material in the retina and in cameras	As previous levels, plus: Transmission of light through materials: absorption, diffuse scattering and specular reflection at a surface Colours and the different frequencies of light, white light and prisms (qualitative only); differential colour effects in absorption and diffuse reflection

	Disciplinary Knowledge	Ask questions based on observations and prior knowledge	Understand that scientific explanations are modified evidence	Make predictions using scientific knowledge	
Wave Effects	Substantive Knowledge			Waves can be reflected, and add or cancel – superposition	As previous levels, plus: Pressure waves transferring energy; use for cleaning and physiotherapy by ultrasound; waves transferring information for conversion to electrical signals by microphone
	Disciplinary Knowledge			Ask questions based on observations and prior knowledge	Make predictions using scientific knowledge
Wave properties	Substantive Knowledge		Waves on water as energy transfer through undulations	As previous levels, plus: Difference between transverse & longitudinal waves	As previous levels, plus: Waves travel through water with transverse motion
	Disciplinary Knowledge		Understand that scientific theories develop as earlier explanations are modification take account of new evidence. Ask questions based on observations and pricknowledge		

Organisms		Foundation Knowledge Block	Knowledge Block 1	Knowledge Block 2	Knowledge Block 3
Movement	Substantive Knowledge	Structure and functions of the human skeleton, to include support, protection, movement	As previous levels, plus:and making blood cells	As previous levels, plus: The function of muscles and examples of antagonistic muscles	As previous levels, plus: Biomechanics – the interaction between skeleton and muscles, including the measurement of force exerted by different muscles
	Disciplinary Knowledge	Ask questions based on ob	servations and prior knowled	dge	Apply mathematical concepts. Use SI units.
Cells	Substantive Knowledge	Cells as the fundamental unit of living organisms	As previous levels, plus: How to observe, interpret and record cell structure using a light microscope The functions of the cell wall, cell membrane, cytoplasm, nucleus, vacuole, mitochondria and chloroplasts Similarities and differences between plant and animal cells	As previous levels, plus: The role of diffusion in the movement of materials in and between cells	As previous levels, plus: The hierarchical organisation of multicellular organisms: from cells to tissues to organs to systems to organisms. The structural adaptations of some unicellular organisms

	Disciplinary Knowledge	Ask questions based on ob	servations and prior knowle	dge	Present data using tables
Breathing	Substantive Knowledge	Why we breathe in terms of supplying oxygen to stay alive, and the role of	As previous levels, plus: The structure and functions of the gas exchange system in	As previous levels, plus: The mechanism of breathing to move air in and out of the lungs,	As previous levels, plus: The role of leaf stomata in gas exchange in plants
		the lungs in simple terms	humans, including adaptations to function	using a pressure model to explain the movement of gases, including simple measurements of lung volume	
				The impact of exercise, asthma and smoking on the human gas exchange system	
	Disciplinary Knowledge	Ask questions based on ob knowledge	servations and prior	Present data using tables and graphs	Ask questions based on prior knowledge
Digestion	Substantive Knowledge	Content of a healthy human diet: carbohydrates, lipids (fats and oils), proteins, vitamins, minerals, dietary fibre and water	As previous levels, plus: and why each nutrient is needed Calculations of energy requirements in a healthy daily diet Consequences of imbalances in the diet, including obesity, starvation and deficiency diseases	As previous levels, plus: the tissues and organs of the human digestive system, including adaptations to function The effects of recreational drugs (including substance misuse) on behaviour, health and life processes	As previous levels, plus: and how the digestive system digests food (enzymes simply as biological catalysts) The importance of bacteria in the human digestive system

Disciplinary Knowledge	Present data using tables a	nd graphs. Ask questions ba	sed on observations and pri	ior knowledge

Ecosystem		Foundation Knowledge Block	Knowledge Block 1	Knowledge Block 2	Knowledge Block 3 ▶
Interdependence	Substantive Knowledge		The interdependence of organisms in an ecosystem, including food webs and insect pollinated crops	As previous levels, plus: The importance of plant reproduction through insect pollination in human food security	As previous levels, plus: How organisms affect, and are affected by, their environment, including the accumulation of toxic materials
	Disciplinary Knowledge		•	and graphs. Ask questions b data, including patterns, to d	
Plant reproduction	Substantive Knowledge	Reproduction in plants, including flower structure	As previous levels, plus: Wind and insect pollination, fertilisation, seed and fruit formation	As previous levels, plus: Seed dispersal methods	As previous levels, plus: Quantitative investigation of seed dispersal methods
	Disciplinary Knowledge	Ask questions based on ob	oservations and prior knowle	dge	Apply mathematical concepts and calculate results. Present data using tables and graphs. Interpret data to draw conclusions
Respiration	Substantive Knowledge	All living organisms on	As previous levels, plus: Respiration occurs in	As previous levels, plus: A word summary for	As previous levels, plus: The process of anaerobic
		Earth need energy to	living organisms, including the breakdown	aerobic respiration	respiration in humans and micro-organisms,

		survive, and this energy is released inside cells	of glucose to release energy for other chemical processes necessary for life	How anaerobic respiration is different, and why it is sometimes necessary	including fermentation, and a word summary for anaerobic respiration
	Disciplinary Knowledge		 p a line of enquiry based on c e. Make predictions using sci		
Photosynthesis	Substantive Knowledge	Plants make their own food, using energy from the sun	As previous levels, plus: Plants make carbohydrates in their leaves by photosynthesis and gain mineral nutrients and water from the soil via their roots	As previous levels, plus: The reactants in, and products of, photosynthesis, and a word summary for photosynthesis The adaptations of leaves for photosynthesis	As previous levels, plus: The dependence of almost all life on Earth on the ability of photosynthetic organisms, such as plants and algae, to use sunlight in photosynthesis to build organic molecules that are an essential energy store and to maintain levels of oxygen and carbon dioxide in the atmosphere
	Disciplinary Knowledge		p a line of enquiry based on c e. Make predictions using sci		

Genes		Foundation Knowledge Block	Knowledge Block 1 →	Knowledge Block 2	Knowledge Block 3
Human reproduction	Substantive Knowledge		As previous levels, plus:	As previous levels, plus:	As previous levels, plus:

		Reproduction in humans (as an example of a mammal), including the structure and function of the male and female reproductive system	The role of gametes in fertilisation	Gestation and birth, to include the effect of maternal lifestyle on the foetus through the placenta	The menstrual cycle (without details of hormones)
	Disciplinary Knowledge			Deservations of the real work entific knowledge and under	
Inheritance	Substantive Knowledge		As previous levels, plus:	As previous levels, plus:	As previous levels, plus:
		That we inherit characteristics from parents through sperm and egg cells	Heredity as the process by which genetic information is transmitted from one generation to the next via gametes	A simple model of chromosomes, genes and DNA	The part played by Watson, Crick, Wilkins and Franklin in the development of the DNA model Genetic disorders may be
					inherited – Cystic Fibrosis
	Disciplinary Knowledge	Ask questions based on observations		methods and theories develo int of new evidence and idea esults and peer review	•
Variation and Evolution	Substantive Knowledge		As previous levels, plus:	As previous levels, plus:	As previous levels, plus:
		That all organisms show variation - well-known examples That organisms complete for food, space, resources and mates	The variation between individuals within a species being continuous or discontinuous, to include measurement and graphical representation of variation	Differences between species, and the significance of producing viable offspring Changes in the environment may leave individuals within a species, and some entire species, less well adapted to compete	The variation between species and between individuals of the same species means some organisms compete more successfully, which can drive natural selection The importance of maintaining biodiversity and the use of gene

		successfully and reproduce, which in turn may lead to extinction	banks to preserve hereditary material
Disciplinary Knowledge	Ask questions based on observations	methods and theories develo nt of new evidence and ideas esults and peer review	

The Science Curriculum Intent - KS4

Key Stage 4

The key stage 4 curriculum continues to build upon the knowledge and skills that were delivered at key stage 3. Pupils are expected to continue to develop their knowledge of science and to continue to develop their skills in working scientifically. We offer GCSE qualifications in Combined Science Trilogy and Biology. Although we don't specifically offer Physics or Chemistry as separate GCSE qualifications we can support any pupils who wish to continue their studies in either of these subjects when they join us.

All pupils in Key Stage 4 access Science, and follow one of the pathways detailed below, leading to GCSE exam entry in Yr11. Pupils joining us during the Spring term of year 11 would still access GCSE Biology, but due to time constraints, this would be an abridged curriculum, addressing Core knowledge only – depending on their prior knowledge and school attendance.

Key Stage 4 Combined Science Trilogy Pathway

The Key Stage 4 Combined Science Trilogy Pathway is a two year course and it is most suited to pupils who are expected to attend with us for at least 5 terms or more due to the large amount of content that pupils are expected to learn. It covers all three scientific disciplines of Biology, Chemistry and Physics and pupils who are entered for the qualification can achieve the equivalent of two GCSE qualifications. The curriculum is taken mapped out in a way in which knowledge builds upon prior knowledge from the key stage 3 curriculum and in a sequenced logical way. We begin with chemistry because this provides pupils with prerequisite knowledge of particles and how they interact, chemical reactions and the nature of matter, which underpin the physics and biology curricula.

Key Stage 4 Combined Science Trilogy Pathway	Autumn		Spring		Summer	
Year 10	Half Term 1 Chemistry • Atomic structure and the periodic table • Bonding, structure and properties of matter	Quantitate chemistry Chemical changes Energy changes	Half Term 1 Physics	Particle model of matter Atomic Structure	Half Term 1 Biology Cell Biology Organisation Infection and Response Bioenergetics	Half Term 2 Homeostasis Inheritance, variation and evolution Ecology
Year 11	The rate and extent of chemical changeOrganic chemistryChemical analysis	Chemistry of the atmosphere Using resources	ForcesWavesMagnetism and electromagnetism		REVISON & EXAMS	5

Key Stage 4 Biology Pathway

The Key Stage 4 Biology Pathway is a two year course and it is most suited to pupils who are expected to attend with us for at least 4 terms or more due to the large amount of content that pupils are expected to learn. It covers in depth, the discipline of Biology, where pupils learn about the organisation of living things, the chemical reactions essential for life, diseases, genetics and how characteristics are inherited, evolution and the interdependence of organisms in ecosystems.

Key Stage 4 Biology Pathway	Αι	itumn	Spi	Spring		Summer	
Biology Fathway							
Year 10	Half Term 1	Half Term 2	Half Term 1	Half Term 2	Half Term 1	Half Term 2	
	Cell Biology	Organisation	Infection and response	Bioenergetics	Homeostasis and response	Inheritance, variation and evolution	
Year 11	Ecology	Key ideas	Revision	Revision	Exams		
	Infection and response	Homeostasis and response	Inheritance, variation and evolution	Revision			
	Bioenergetics		Ecology				

Assessment and Progress in Science

For every unit of work, mid-term plans set out the new knowledge and skills that pupils should acquire. During the term teachers use a range of formative and summative assessments to systematically check pupils' understanding and to establish what new knowledge and skills they have acquired. Teachers are asked to record any formative or summative assessments against the key knowledge objectives on the Insight system for the units of work that they have delivered. At the end of the term teachers are asked to use this assessment data to attribute a BIT level to each pupil.

The Trust has established its own grade descriptors for Science in all of its secondary provisions, they range from Pre GCSE levels 1 to grade 9. The grade descriptors are aligned with GCSE grades, Functional Skills levels and Pearson Steps and they are called 'BIT Levels'. Progress is reported in these levels each term and teachers are expected to make a 'best fit' decision on which level each pupil is at for using a mixture of formative and summative assessments throughout each term. These levels are moderated both by the Science subject leads, SLT and the Trust's Central Team.

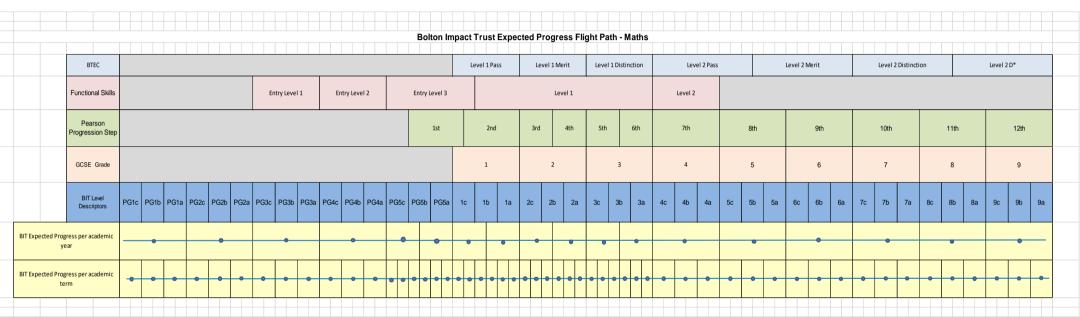

BIT Level Descriptors for Science

BIT Level	Descriptor
9	To achieve grade 9, students' evidence will show that they have securely met all the statements within the grade 8 descriptor, with stronger performance in most or all aspects of the grade 8 statements.
8	 To achieve grade 8, candidates will be able to: demonstrate relevant and comprehensive knowledge and understanding and apply these correctly to both familiar and unfamiliar contexts using accurate scientific terminology develop accurate, logical and detailed descriptions, explanations and arguments use a range of mathematical skills to perform complex, multi-step scientific calculations critically analyse qualitative and quantitative data and draw logical, well-evidenced conclusions critically evaluate and refine methodologies, and judge the validity of scientific conclusions
7	To achieve grade 7, students' evidence will show that they have securely met all the statements within the grade 6 descriptor, with stronger performance in most or all aspects of the grade 6 statements. However, their evidence does not meet the minimum requirements of most of the grade 8 statements.
6	To achieve grade 6, candidates will be able to:

	 demonstrate accurate and relevant knowledge and understanding and apply these mostly correctly to both familiar and unfamiliar contexts using accurate scientific terminology develop accurate, logical and detailed descriptions and straightforward explanations use a range of mathematical skills to perform multi-step scientific calculations analyse qualitative and quantitative data and draw logical conclusions, supported by evidence evaluate methodologies to suggest improvements and developments to experimental methods, and comment on the accuracy and validity of scientific conclusions
5	To achieve grade 5, candidates will be able to: demonstrate mostly accurate and appropriate knowledge and understanding and apply these mostly correctly to familiar and unfamiliar contexts, using mostly accurate scientific terminology develop mostly accurate and logical descriptions, which includes some relevant detail and simple explanations use appropriate mathematical skills to perform multi-step calculations analyse qualitative and quantitative data and draw plausible conclusions supported by some evidence evaluate methodologies to suggest improvements to experimental methods, and comment on the accuracy of scientific conclusions
4	To achieve grade 4, candidates will be able to: demonstrate some accurate and appropriate knowledge and understanding and apply these to some familiar and unfamiliar contexts, using some accurate scientific terminology develop some logical descriptions, which includes some accurate and relevant detail use appropriate mathematical skills to perform calculations interpret qualitative and quantitative data and draw conclusions supported by some evidence suggest improvements to experimental methods, and comment on the

	accuracy of scientific conclusions
3	Characteristics that differentiate a grade 3 from a grade 4:
	 correct answers more likely to address familiar contexts than unfamiliar contexts correct answers more likely where prompts and scaffolding are provided descriptions are often partial and lacking relevant detail
	 perform some calculations when scaffolding is given draw conclusions from qualitative or quantitative data, but evidence to
	support may not be clear or present
	make some comments relating to experimental methods, but may not
	demonstrate an understanding of how to improve the experimental method or the accuracy of scientific conclusions
2	To achieve grade 2, candidates will be able to:
	demonstrate some relevant scientific knowledge and understanding using limited scientific terminology
	 perform some basic calculations draw simple conclusions from qualitative or quantitative data make basic comments relating to experimental methods
1	To achieve a grade 1, students' evidence will show that they have demonstrated engagement with sufficient content, achieved some credit across elements of the specification content and achieved credit in some assessment objectives.

Science Flight Path

In Science we have high expectations for our pupils and we use the flight path created for Maths across the Trust to judge the progress of our pupils each term. Once a pupil has been baselined, teachers calculate their expected progress using the flight path. Pupils who progress according to the flight path are judged as 'On track'. Those who do better are judged as working at 'Greater depth'. Those who are one sub-level behind on the flight path are judged as 'just below' and those who are further behind are judged as 'below'

Some pupils veer off the course of the flight path during their time with us for many different reasons. For those pupils who are not making expected flight path progress, we report on how many sub-levels of progress they have made in a term.

SEND

In Science, pupils with additional SEND are identified on entry via our pupil referral system, with specific targeted support strategies identified and recorded on the pupil's Personalised Learning Plan. The majority of pupils will join either a KS3 or KS4 class with their peers, accessing the full complement of 5 science lessons per week. Careful consideration is given to seating arrangements and environmental considerations, such as lighting, sound levels and wall displays, according to the information provided at referral.

All science lessons are taught by an experienced science specialist teacher, with additional classroom support provided by a designated Learning Mentor, allocated to best support science learning. The Science teacher and designated Learning Mentor collaborate with curriculum implementation, and recommendations for individual pupils are discussed on a daily basis. Teaching and pastoral support strategies are reviewed daily, in order to respond quickly to pupils' additional needs in science.

Some pupils who join Park School may need additional pastoral support to meet their SEMH needs. These pupils join a smaller Well-being group, and access 2 science lessons per week, taught by the science specialist teacher. Pupils in the Well-being group access learning with further differentiation and use of therapeutic and kinaesthetic teaching activities in order to meet their specific additional needs. Pupils in the Well-being group have access to the full science curriculum, with their progress tracked and reviewed in line with their peers in the other groups. The aim here is to provide those pupils who require higher level of pastoral care, additional time to integrate fully into school. Pupils are then supported by a phased transition into the relevant core group, in order to access the full allocation of science lessons.
