

Knowledge Building

Processes and Changes

Change happens as a result of different **scientific processes**. Unlike in geography, where processes can be split into two distinct groups (physical and human), scientific processes can be wide-ranging. Some examples of these are: changing states of matter, growth of animals and plants and changing of one type of energy to another, such as using solar energy to produce electrical power. These processes can be the subject of experimentation and changes can be observed, measured and recorded. Pupils will see how **processes and changes** work together, but how factors within the processes can affect changes.

Methods

In science, **methods** are a key part of seeking knowledge and answers to scientific problems. **Methods** are a logical way of organising scientific study and experiments so that ideas can be proven, answered and re-tested, if necessary. Most **methods** involve thinking of a hypothesis, testing that hypothesis then concluding and evaluating the results. Pupils will look at what makes a good scientific **method** and learn that using these **methods** makes for safer experimentation and leads to more reliable, accurate results.

Observing and Recording

At the most basic level, **observing and recording** is saying what you see and notice, and noting that down in some form. Being able to do this and decide what is significant is an important part of becoming a **scientist**. Progression involves using more technical equipment, then using observations and recordings to support theories, arguments and findings.

Scientific Vocabulary

The language of science can be broken down into various areas. Initially, basic language covers general science terms such as experiment, record, look, change etc. **Scientific vocabulary** then becomes more specific, depending on the area of science being studied, for example the language of biology could include animal, plant, reproduction, offspring, grow and the language of chemistry may use materials, chemical, change, liquid, gas etc. Finally, vocabulary can be used to link concepts together and be used in different contexts.

Uses and Implications

As with observing and recording, it is important to recognise that science takes place every day. Pupils will see that, even in mundane everyday activities, science is featured. Initially, it may only be the **uses** of science that are recognised but progression means they then explore how these **uses** have **implications**. For example, the use of single-use plastic, however useful to us as humans, has implications in environmental science terms.

Cross-Curricular (STEM)

With links to **uses and implications**, children will see that science has strong ties to other areas of their learning, particularly maths and technology. The use of science within these subjects has strong implications for progression and development in all three.

PATHFINDERS

Knowledge Building					
Processes and Changes	Methods	Observing and Recording	Scientific Vocabulary	Uses and Implications	Cross-Curricular (STEM)
Identify simple processes and explain in basic terms how they happen	Know the key parts of a simple scientific method	Know how to use simple equipment in observing and recording	Understand some vocabulary linked to specific area of science e.g. animals - species	Know that science is used in a range of everyday situations, both in and outside the classroom	Identify clear connections between science, technology and mathematics for basic experimenting
Skills Progression					
Science Skills Pathfinders 1 / Y1			Science Skills Pathfinders 2 / Y2		
Sc1 Suggest what might happen and perform simple tests Sc2 Explore using senses and record findings in simple ways Sc3 Collect evidence to try to answer a question Sc4 Make simple comparisons through observation Sc5 Identify and classify based on simple criteria			Sc6 Explore and observe in order to collect data and describe and compare findings Sc7 With help, suggest some ideas and questions and predict what might happen Sc8 Use first-hand observation, own experience and simple information sources to make comparisons and answer questions Sc9 Observe closely using simple equipment Sc10 Recognise ways in which evidence can be collected Sc11 Use simple scientific language Sc12 Perform simple tests Sc13 Record findings in various formats using standard units, drawings, diagrams, photographs, simple prepared formats such as tables and charts, tally charts, and displays Sc14 Say whether what happened was what was expected and draw simple conclusions to help answer questions		

Science

Knowledge Progression

Pathfinders 1 / Year 1

Happily Ever After

Pupils will learn, through class discussion, the difference between living and non-living things. They will be introduced to the concept of change and use the story of the 'Ugly Duckling' to explore the changes that occur over the life span of a swan. Pupils will use observation to identify the key characteristics of birds such as feathers, beaks etc. Simple scientific vocabulary relating to living things will be introduced. They will develop their understanding of life cycles and offspring through birds, in comparison to frogs, before looking in more detail at suitable habitats for different animals.

Concepts

- To know the difference between living things and things that have never been alive (NC)
- To identify and name a variety of birds
- To know that humans and other animals can produce offspring and that these offspring can grow into adults (NC)

Come Fly With Me! Arctic Circle

Initially, pupils will embed learning about the main features of each season within the UK. Pupils will also learn that seasons can be very different in other parts of the world, and this will be expanded on in Adventurers.

They will move on to explore the properties of a range of materials used in everyday objects. Pupils will investigate the properties of materials through their senses. The study of materials extends into how malleable certain solid materials can be by squashing, bending, twisting and stretching. Lastly, pupils will learn about the meaning of the term 'waterproof' and experiment using simple tests on a range of materials for waterproofness.

- To identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other / To identify and name a variety of plants and animals in their habitats, including microhabitats

NC Concepts

- To learn the names of, describe weather associated with and observe changes across the four seasons
- To identify and name a variety of everyday materials, including wood, plastic, glass, metal, water and rock, and to know, describe and compare how their simple physical properties vary. Group together a variety of everyday materials on the basis of their simple physical properties
- To find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching
- To distinguish between an object and the material from which it is made and compare the uses of a variety of everyday materials

Pathfinders 2 / Year 2

Land Ahoy!

To begin with, pupils will look at how objects to move by creating lists and then sorting through observation. They will know what defines a push or pull force and conduct simple experiments on increasing these forces to affect speed. Language such as 'faster' and 'slower' will be used to compare how things move and pupils will recognise the importance of adjusting speed in everyday life. Pupils will be introduced to the term 'sources' when learning about where sounds come from and know that language such as 'quieter' and 'louder' is used when comparing sounds.

Concepts

- To compare how different things move (LKS2 - NC)
- To notice and describe how things are moving, using simple comparisons such as faster and slower
- To understand that there are many kinds of sound and sources of sound
- To know that sounds get fainter as the distance from the sound source increases (LKS2 - NC)

Going Wild

Pupils will continue to develop their understanding of what it is that defines a living thing through discussions and questioning and have a clear understanding of what the terms 'living' and 'non-living' mean. Further learning on adults and offspring will look at what is needed to care for a human baby and how that baby changes as it grows. Pupils will be introduced to a range of vocabulary relating to gender, age, stage and diet. Pupils will use reasoning and explanation to list things vital for survival and recognise that science can be used outside the classroom to protect habitats and endangered species.

NC Concepts

- To understand the difference between things that are living and things that have never been alive
- To learn that animals, as well as humans, have offspring, which grow into adults
- To learn about the basic needs of animals, as well as humans, for survival (which are food, water and air)
- To identify and name a variety of common animals that are birds, fish, amphibians, reptiles and mammals
- To describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets)
- To identify and name a variety of common animals that are carnivores, herbivores and omnivores

Additional Concept

- To know that some animals are endangered, the reasons why and what is being done to preserve these species

Knowledge Progression

Pathfinders 1 / Year 1	Pathfinders 2 / Year 2
<p align="center">Unity in the Community</p> <p> Pupils will build on their knowledge of plants from the Explorers Learning Pathway to learn about the structure of plants and learn the correct language to describe their parts. Through learning walks, pupils will observe a variety of different plants and trees. Pupils will learn that plants can grow from either seeds or bulbs but all require certain conditions in order to flourish and be healthy. They will conduct a simple experiment for growing their own plants and use STEM skills to record growth. Pupils will expand their knowledge of the relationship between plants and animals by learning about food chains. Pupils will learn the terms 'deciduous' and 'evergreen' in relation to trees.</p> <p>NC Concepts</p> <ul style="list-style-type: none"> A. To know and describe the basic structure of a variety of common flowering plants B. To know and describe how seeds and bulbs grow into mature plants C. To learn that plants need water, light and a suitable temperature to grow and stay healthy D. To name and identify a variety of common wild and garden plants, including deciduous and evergreen trees E. To know how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food 	<p align="center">Zero to Hero</p> <p> Pupils will develop their understanding of light sources and expand this to include those sources that also provide heat energy as well as light. They will recognise that some sources require electricity to work and, therefore, need a circuit and power source in order to function. Pupils will experiment with toys that require electricity and conduct some simple tests from which they can draw conclusions on how these appliances work. Pupils will learn the correct vocabulary for circuit components and will perform some simple tests on putting the components together to make a basic functioning circuit. An introduction to switches will allow for experimenting with how circuits can be broken safely.</p> <p>Concepts</p> <ul style="list-style-type: none"> A. To observe and name a variety of sources of light, including electric lights, flames and the Sun B. To know that fire has been used throughout history for heat and light C. To know about simple circuits involving batteries, wires, bulbs and other components D. To know how a switch can be used to break a circuit
<p align="center">Light Up the World</p> <p> Pupils will learn that, like sound, we use the term 'source' when discussing where light comes from. They will use categorisation to sort light sources and non-light sources, identifying those that require electricity to work. They will learn that the Sun is a light source and they will experiment with using the Sun's energy, recording their findings in a simple way. The concept of sustainable energy will be introduced. Pupils will investigate how shadows are formed and that light levels, as well as shadows, can change. Finally, pupils will look at how light affects animals and identify those animals (nocturnal) that prefer darkness to light.</p> <p>Concepts</p> <ul style="list-style-type: none"> A. To recognise that we need light in order to see things and that dark is the absence of light (LKS2- NC) B. To know, name and observe a variety of sources of light, including electric lights, flames and the Sun C. To recognise that light from the Sun can be dangerous and that there are ways to protect their eyes (LKS2- NC) D. To understand that the Sun provides energy and that solar power is a sustainable energy source E. To be aware of simple ways to save electricity F. To know that shadows are formed when the light from a light source is blocked by a solid object (LKS2 - NC) G. To understand the term 'nocturnal' and learn about nocturnal animals

<p>Full of Beans</p> <p>In this unit, pupils will further develop their knowledge and understanding of electricity. They will embed and extend their understanding of circuits by experimenting with variations of components, and the concept of voltage will be introduced through changing the number of cells in their circuits. They will also use scientifically correct symbols for components when completing circuit diagrams. They will now learn and use the correct symbols to represent components. Furthermore, pupils will look at energy, identifying its various forms (thermal, light, kinetic), how it is created through renewable and non-renewable sources and the implications this has on real-world use.</p> <p>Concepts</p> <ol style="list-style-type: none"> To identify common appliances that run on electricity To compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on / off positions of switches (NC) To be able to associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit (NC) To know how to use recognised symbols when representing a simple circuit in a diagram (NC) To understand the term 'energy' and identify a range of different renewable and non-renewable energy sources 	<p>Global Warning</p> <p>Pupils will explore changing states of matter in more detail. Initially, they will research the numerous factors and processes that are used to recycle glass and paper. Pupils will then have several opportunities to experiment with changing materials by the introduction of processes such as dissolving, filtering and evaporating etc. They will also test whether changes can be reversible. The experiments that the pupils will devise will require a greater focus on fair testing, using comparisons and retesting to ensure the data collected is accurate. Vocabulary such as substance, solution and mixture will be introduced.</p> <p>NC Concepts</p> <ol style="list-style-type: none"> To know that some changes result in the formation of new materials, and that this kind of change is not usually reversible To compare and group together everyday materials based on evidence from comparative and fair tests, including their hardness, solubility, conductivity (electrical and thermal), and response to magnets To suggest how mixtures might be separated, including through filtering, sieving and evaporating, using their knowledge of solids, liquids and gases To know how to demonstrate that dissolving, mixing and changes of state are often reversible changes To understand how some materials will dissolve in liquid to form a solution and describe how to recover a substance from a solution To show understanding by giving reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic

Science

Knowledge Progression

Navigators 1 / Y5	Navigators 2 / Y6
<p align="center">Come Fly With Me! America</p> <p> Pupils will learn that objects are made from materials which are often combined e.g. a window is made of glass, wood and metal. They will look at objects, identify what they are made from and discuss why the chosen material is suitable for that object. Pupils will also differentiate between man-made and natural materials. With a focus on cotton wool, pupils will devise their own investigations to test either absorbency, flexibility or strength etc. They will be expected to produce a sound methodology and analyse their findings.</p> <p>Concepts</p> <p>A. To distinguish between an object and the material from which it is made B. To understand the difference between man-made and natural materials and identify and sort both</p>	<p align="center">"I Have a Dream..."</p> <p> Pupils will use their previous knowledge of life cycles to explore the similarities and differences between various animal and plant species. Based on specific criteria and questions, pupils will research the life and reproductive cycles of a variety of animals and plants with opportunity for analysis, discussion and comparison. Pupils will be expected to start to give more scientific reasoning for the groupings of plants and animals by using established classification systems. They will also start to investigate adaptations of various plants and animals to suit particular biomes and how some of these adaptations have led to evolutionary changes.</p> <p>NC Concepts</p> <p>A. To know the difference in the life cycles of a mammal, an amphibian, an insect and a bird B. To recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents C. To be able to describe the life process of reproduction in some plants and animals D. To be able to classify plants and animals based on specific characteristics and give reasons E. To describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences F. To know and identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution</p>
<p align="center">Navigators 1 / Y5</p> <p align="center">Mission Control</p> <p> In this unit, pupils will look at the relationship between the Sun, Earth and Moon and how their movements and location in the solar system affect one another. Pupils will produce detailed labelled diagrams and written explanations, including graphs, to support their ideas. Pupils will deepen their knowledge of the Moon's relationship with the Earth, through self-directed research that will be shared with their peers for discussion.</p> <p>NC Concepts</p> <p>A. To know that the Sun, Earth and Moon are approximately spherical bodies B. To know about and explain the movement of the Earth relative to the Sun in the solar system C. To use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky D. To know about and explain the movement of the Moon relative to the Earth</p>	<p align="center">Navigators 2 / Y6</p> <p align="center">A World of Bright Ideas</p> <p> In this unit, pupils will research and present findings on Sir Isaac Newton and develop their understanding of gravity. Pupils will carry out a number of experiments on the effects of water, air and frictional resistance. The experiments will require reasoned predictions, accurate recording of data and will be shared with the class once complete. Finally, pupils will carry out investigations into mechanisms and use STEM skills to make and test them. Pupils will discuss how these mechanisms are used in everyday life.</p> <p>NC Concepts</p> <p>A. To know that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object B. To identify the effect of air resistance and friction, that act between moving surfaces C. To recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect</p>
<p align="center">Go With the Flow</p> <p>Pupils will develop their understanding of growth and change in animals and humans by researching, sorting and comparing the gestational periods, life cycles and life spans of humans and animals. Using established research, pupils will investigate how diet, drugs and exercise can affect health and life expectancy in humans. The circulatory system will be introduced and pupils will investigate pulse rate, producing graphs to show their findings. They will investigate how vital water is for survival and compare how long animals can survive without water, discussing their findings with the class.</p> <p>NC Concepts</p> <p>A. To know and describe the changes as humans develop to old age B. To recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function C. To identify and name the main parts of the human circulatory systems, and explain the functions of the heart, blood vessels and blood D. To describe the ways in which nutrients and water are transported within animals, including humans</p>	<p align="center">Wars of the World</p> <p> Pupils will carry out a range of experiments to test the theory of light travelling in a straight lines, and the concept of refraction when creating rainbows. Pupils will observe what happens and record their findings appropriately. The structure of the human eye will be introduced with the correct vocabulary and pupils will create labelled diagrams. Finally, pupils will embed their knowledge of shadows by creating shadow puppet theatres, which will include the use of transparent, translucent and opaque materials.</p> <p>NC Concepts</p> <p>A. To understand that light appears to travel in straight lines B. To use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye C. To know that we see things because light travels from light sources to our eyes or from light sources to objects and then our eyes see them D. To use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them</p>

Science

Key Vocabulary

Navigators 1 / Year 5			Navigators 2 / Year 6		
Full of Beans			Global Warming		
brightness	fuel	pollution	biodegradable	irreversible	reuse
bulb	gas	radioactive	conductivity	liquid	reversible
buzzer	kinetic	renewable/	(electrical and	magnet	separating sieving
calorie	nuclear	non-renewable	thermal)	mixing	solid
cell	oil	energy sources	dissolve	nurdles	solubility
circuit diagram	plutonium	sustainable	dredging	pollutants	solution
coal		thermal	evaporating	recycle	substance
consumption		uranium	filtering	reduce	waste
efficiency		voltage	gas		
energy		volume			
		wind power			

Key Vocabulary

Navigators 1 / Year 5			Navigators 2 / Year 6		
Come Fly With Me! America			"I Have A Dream..."		
absorbency	friendly		adaptation	evolution	reproduction
classify	flexibility		amphibian	gills	sexual reproduction
cotton	man-made materials		appearance	habitat	tendrils
environmentally	manufacturing		biomes	hereditary	theories of evolution
properties	natural		bird	insect	vertebrate
strength	process		birth rate	invertebrate	
			classification	mammal	
			egg		
			environment		

Key Vocabulary					
Navigators 1 / Year 5			Navigators 2 / Year 6		
A World of Bright Ideas			Mission Control		
accelerate	gravity	spring	axis	planetary motion	sun
air resistance	lever	water resistance	constellations	rotation	tides
block and tackle	load		cycle	satellite	
brake	newton meter		day and night	solar system	
decelerate	pulley		device	space agencies	
effort	resistance		earth	spherical bodies	
fall	fulcrum		flat earth theory	orbit	
force	gears		galaxy	planet	
friction			moon		
Key Vocabulary					
Navigators 1 / Year 5			Navigators 2 / Year 6		
Go With the Flow			Wars of the World		
additive	joints	pregnant	absorption	retina	
adolescent	life cycle	pulse	beam	shadows	
blood	lungs	stethoscope	cornea	shiny	
cardiac	oxygenated	sweat	eye	torch	
cell	plasma	urine	iris	translucent	
blood pressure	platelets	veins	lens	transparent	
blood vessel	pore		light		
dehydration	womb		light-emitting devices		
drug			opaque		
function			periscope		
gestation			reflect		
heart			refraction		

End Goals

Explorers / EYFS

Our aim in teaching science in Explorers is to tap into pupils' curiosity about the world around them. By the end of this phase, pupils should be able to use their senses to investigate a range of materials and should be starting to become familiar with the concept of natural and man-made materials. Pupils should be able to talk in simple terms about how plants and animals change over the course of their life cycles and observe the growth of a plant from seed to full development. Pupils should recognise that humans and animals require a suitable place to live and need food and water to survive. By the end of this phase, they should also be aware of seasonal changes and be able to have conversations about what they see, hear and feel outdoors. Pupils should be able to identify a range of light sources and use light to create reflections and shadows. Pupils should be able to start making comparisons between two or more things e.g. objects, animals, recognising similarities and differences between them.

Pathfinders / KS1

Our aim in teaching science in Pathfinders is to embed and build on learning in Explorers by beginning to develop their ability to work more scientifically. By the end of this phase, pupils should be able to write basic methods for experiments and use some simple equipment to observe and record their findings. They should also be able to make predictions, with reasons for their ideas, before proceeding with an experiment. Pupils should be able to draw on some of their mathematical skills to create charts from data collection and use this data to draw conclusions. Pupils should be able to use a wider range of scientific vocabulary in both their class discussions and written work. We believe that learning in science develops through the experience and development of scientific concepts in incremental steps in each phase. For this reason, we have made the following changes to the Programme of Study within the Science National Curriculum to support children's learning. Exploratory units of Light, Electricity, Sound and Forces have been included in Pathfinders (Key Stage 1) to ensure that children gain initial experience of a range of 'Physical' science before Key Stage 2.

They should also have a secure knowledge of what animals and plants need to survive and be able to classify things that are alive and those that are not. Pupils should also be able to explain in more detail the process of growing plants from seeds and bulbs, using a wider scientific vocabulary. When working with materials, pupils should be able to distinguish the difference between an object and material/s it is made from. They should also be able to conduct some simple experiments on the suitability of certain materials for different uses.

Adventurers / LKS2

Our aim in teaching science in Adventurers is to encourage pupils to start to become more scientifically accurate, with the introduction of a range of testing, alongside the questioning and comparing of data when drawing conclusions. In this phase, pupils will have revisited a number of areas of science from Pathfinders, and will be expected to end this phase with a deeper understanding of them through the use of a wider scientific vocabulary and more complex investigative techniques. Pupils should be able to use more technical methods of grouping and classifying, such as classification keys and food chain diagrams. Pupils should also be able to present their findings from experiments in more formal ways and provide evidence for their findings.

They should be able to explain the key features of the digestive and skeletal systems in animals and should have a deeper understanding of the reproductive processes of plants and their key parts. Pupils should be able to recognise the difference between volume and pitch when investigating sound and recognise how reflections are formed in the study of light. By the end of the phase, pupils should be able to make and draw diagrams of more complex electrical circuits that include switches. They should also be able to recognise the roles of conductors and insulators in making circuits functional but safe.

Navigators / UKS2

Our aim in teaching science in Navigators is to deepen pupils' knowledge and skills in a wide range of scientific areas. Pupils should now be confident in devising and conducting experiments and presenting their methods and findings with accuracy, using a range of different methods. In this phase, pupils are now expected to, not only ensure fair testing in their experiments, but also conduct comparative tests where appropriate. Pupils should be able to analyse, discuss and argue constructively for and against particular theories or ideas and use evidence to support their own views. They should be able to research and produce explanations or theories that look at scientific concepts beyond the classroom, such as evolutionary theories or the use of renewable energy sources. They should also know about the circulatory and the solar systems, as well as more complex forces such as gravity, water, air and frictional resistance.
