

Worm

A **worm** is a long, creeping animal, with a soft body.

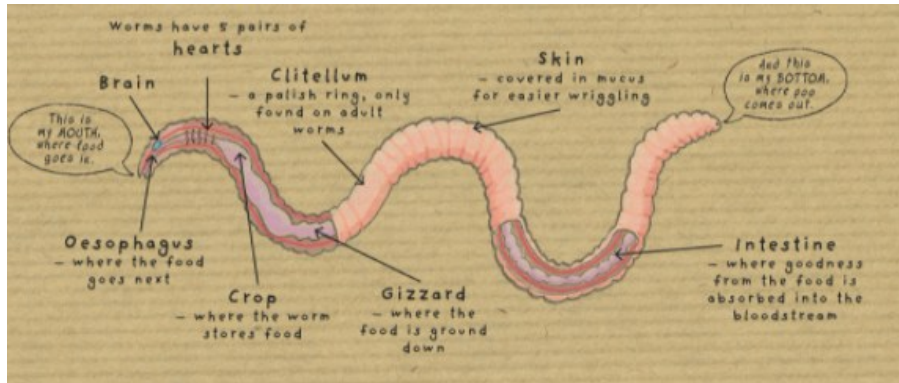

Wormery

A container with transparent walls in which worms are kept to study and make compost.

Bristles

For a worm to move it pushes its front end forwards and uses its bristles to hold the end in place, whilst the back catches up.

Re-growth

A worm's tail can regrow if it's cut off, but cutting a worm in half will kill it.

Always remember to wash your hands after handling a worm
