

Worm

A **worm** is a long, creeping animal, with a soft body.

Re-growth

A worm's tail can regrow if it's cut off, but cutting a worm in half will kill it.

Wormery

A container with transparent walls in which worms are kept to study and make compost.

Bristles

To move it pushes its front end forwards and uses its bristles to hold the end in place while the back catches up.

Always remember to wash your hands after handling a worm
