

We understand that some parents have had difficulty connecting the school laptops to the internet.

Please follow these instructions below.

1. Turn your laptop on
2. When you see the login screen look in the bottom right hand corner (as shown in picture below)

Look for the globe in the corner

3. When you click the globe you should be able to find your internet and connect.

4. Once connected, log on using the username given.

If for any reason this doesn't work. The next thing is to use a network cable to directly connect the laptop and the router together (we have some in school which we are able to lend you)

Many thanks
