

Geography Subject Intent

At Carleton Green it is our intent that children access a high-quality geography curriculum that is well resourced and engaging with practical aspects throughout. We encourage children to be confident in their location and place knowledge and support them to embed their geographical skills through field work in every year.

Each term, children work towards objectives relating to location knowledge, place knowledge, human and physical geography and geographical skills and fieldwork. We strive to work in a cross-curricular way, where possible, to embed knowledge and make meaningful links for the children.

Our curriculum builds term by term and year by year so that children are always drawing on prior knowledge, making links and embedding prior geographical skills and knowledge whilst also learning new skills and expanding their factual understanding.
