DT

At Castle Hill Primary, we believe that it is essential that all children are equipped with the skills to problem solve and think rationally when creating a solution. We believe that it is important for children to work creatively and use their imagination when designing a product, both individually and when working in a team.

We think it is vital that all children can test and evaluate both existing products and products they have designed and created themselves. We ensure that they are given opportunities to discuss successes and problems that they experienced during their designing and making journey, to enable them to think from a designer's point of view when moving onto their next project.

We have designed a curriculum to ensure that children are engaged in real life situations linking to the whole school themes set, meaning that children are able to transfer their knowledge of their theme to assist them when designing. Our aim is to encourage children to become fluent thinkers, evolving their own ideas and adapting them when needed in order to fit a design brief. We have created a curriculum that allows them to develop their existing skills to allow them to successfully transfer these into Key Stage 3.
