

The Chilli Children Project operates under the Anglican Diocese of North Kigezi. It does not, however, discriminate against any beneficiary based on their religious or any other beliefs. Families supported by the Project are often amongst the most vulnerable or are some of the poorest within their communities. The Project believes that all children deserve to be given the opportunity to lead lives free from the stigma and limitations of their condition.

### **So how can you get involved?**

There are many different ways that you can support the life changing work of the Chilli Children.

### **Follow us**

on social media for regular updates

Bringing hope, healing and opportunity to children with life-limiting disabilities across 4 districts in rural south western Uganda

Education

Medical Outreach

Surgery

Physiotherapy and Learning Life Skills

Chilli Growing for Income Generation

Registered Charity "Chilli Children of Rukungiri (Uganda)"

Charity Number 1106601

We are a small but mighty charity, making a huge difference with limited resources. We are proud to say that over 98% of donations go *directly* to the Project in Uganda. All of our services are free to the people who need them most. Here is some more information about the vital and valuable work that we do.

**Education**

We believe in education for all. We run an educational boarding Unit for children with disabilities at Kitazigurukwa Primary School in Rukungiri, funding teachers, support staff, food and all other needs. We also sponsor the education of a number of blind and deaf children at specialist schools who would otherwise not afford to be in school.

**Medical Outreach**

We conduct regular clinics and surveys in rural villages across south western Uganda to identify children with disabilities who have been hidden away, to counsel and teach their caregivers. We facilitate two-monthly trips for the treatment and review of children with neurological conditions. We also support families with special equipment to use at home. Finally, we run free weekly treatment clinics for children with club foot.

**Surgery**

We fund the surgery of children with life limiting conditions; from orthopedic conditions such as genu valgum or osteomyelitis, plastic surgery for severe burns, or life saving surgery for hydrocephalus. Costs for these medical interventions would be otherwise unaffordable for the families.

**Physiotherapy and Learning Life Skills**

We run physiotherapy and life skills clinics for children with disabilities at our Rehabilitation Unit every day. These clinics are an opportunity for children and caregivers to come together, encourage each other and receive professional advice and services from our team.

**Chilli Growing for Income Generation**

Families who have been supported by the Project are encouraged, taught and facilitated to grow chillies as a way of earning much needed income thereby promoting self sufficiency, along with developing a sense of purpose, bringing families together and minimizing social isolation.
