Which of these are examples of fractions?

Which are non-examples?

Why?

A fraction shows us a number of **EQUAL PARTS**.

Which of these are examples of fractions?

Which are non-examples?

Why?

A fraction shows us a number of EQUAL PARTS.

Which of these are examples of fractions?

Which are non-examples?

Why?

Number lines need to be split into EQUAL PARTS.

Which of these are examples of fractions?

Which are non-examples?

Why?

Number lines need to be split into EQUAL PARTS.

Sort and copy the representations (shown on the next page)
into the correct column...

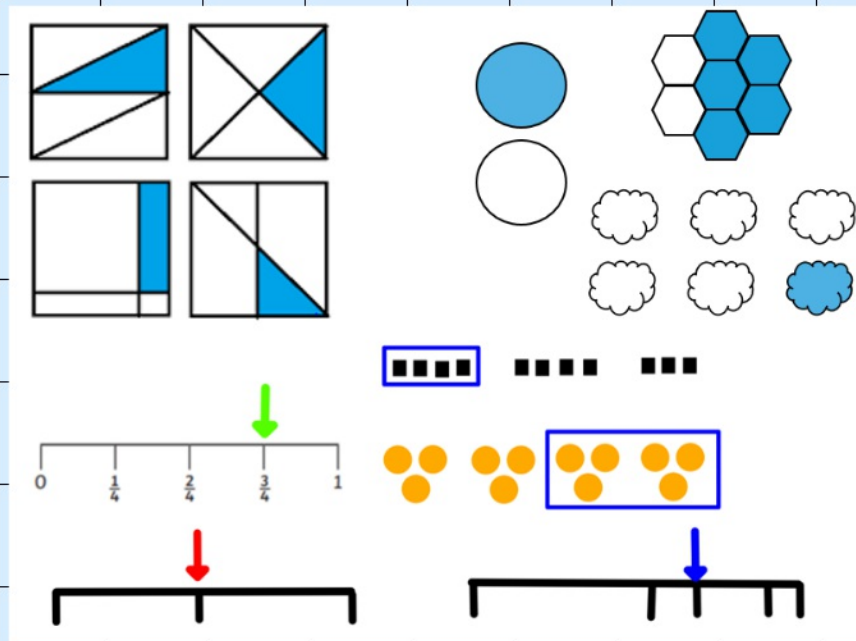

Examples

These are examples of
fractions because _____

Non-Examples

These are non-examples of
fractions because _____

Sort and copy the representations into the correct places.

Extension:

Always, Sometimes, Never?

Alex says,

If I split a shape into 4 parts, I have split it into quarters.

Explain your answer.

ANSWERS:

Examples

These are examples of fractions because they have equal groups or parts.

Non-Examples

These are non-examples of fractions because they do not have equal groups or parts.

Sometimes true, if they are 4 equal parts.

Extension:

Always, Sometimes, Never?

Alex says,

If I split a shape into 4 parts, I have split it into quarters.

Explain your answer.

What fractions are shown here?

What does a numerator tell us?

What does a denominator tell us?

How do we write fractions?

<https://vimeo.com/169309648>

These are all examples
of *unit-fractions*.

Their numerator is 1.

This is called a FRAYER Model
