

03.02.21

IALT: understand tenths (R).

Challenge:

$$\underline{\quad} + 45 = 100$$

$$83 + \underline{\quad} = 100$$

$$91 + \underline{\quad} = 100$$

$$100 - 24 =$$

$$100 - 35 =$$

$$100 - \underline{\quad} = 12$$

$$100 - \underline{\quad} = 30$$

$$100 - \underline{\quad} = 5$$

03.02.21

IALT: understand tenths (R).

Challenge:

$$\underline{55} + 45 = 100$$

$$83 + \underline{17} = 100$$

$$91 + \underline{9} = 100$$

$$100 - 24 = \underline{76}$$

$$100 - 35 = \underline{65}$$

$$100 - \underline{88} = 12$$

$$100 - \underline{70} = 30$$

$$100 - \underline{95} = 5$$

a)

b)

- a) What fraction of the whole jigsaw is 1 piece?
- b) Danny removes 2 pieces of the jigsaw. What fraction does he remove?
- Is the answer the same no matter which pieces he removes?

- a) What fraction of the whole jigsaw is 1 piece?
- b) Danny removes 2 pieces of the jigsaw. What fraction does he remove?
- Is the answer the same no matter which pieces he removes?

a)

b)

How many equal parts are there all together?
How much is each part worth?

What fraction have red counters?

What fraction have no counters?

When I am writing in tenths the denominator is always ____.

How many equal parts are there all together?

How can we write this as a fraction?
What is the numerator/ denominator?
What fraction is left?

$\frac{10}{10}$ equivalent to 1

1 pizza

1 group of children

If I wanted to share one whole cake with 10 people.
I would divide the cake into 10 equal parts

How are fractions linked to division?

$$\frac{1}{10}$$

Each person will get $\frac{1}{10}$

1 cake shared between 10 people = $\frac{1}{10}$

Lets imagine the cake as a bar model

The bar model has been divided into **10** equal parts

1 cake

divided by ten

$$\begin{array}{r} = 1 \\ \hline 10 \end{array}$$

1 out of the **ten** parts is shaded

10

2 whole cakes

If I had 2 whole cakes and wanted to share with 10 people
what fraction would each person get?

What would be the number sentence?

2 cakes shared between 10 people

There are 2 wholes models represent the 2 cakes. 1 part from each must be shaded

Work Presentation

$$2 \div 10 =$$

$$\frac{2}{10}$$

1. Write the question

2. Complete part whole model

3. Go back to the number sentence and write the answer

$$\frac{1}{10}$$

$$\frac{1}{10}$$

How many tenths make a whole?

When I am writing tenths, the _____ is always 10

$$3 \div 10 =$$

$$4 \div 10 =$$

$$5 \div 10 =$$

$$6 \div 10 =$$

a. $\frac{\square}{\square} = 2 \div 10$ c. $0 \div 10 = \frac{\square}{\square}$

b. $\frac{\square}{\square} = 9 \div 10$ d. $10 \div 10 = \frac{\square}{\square}$

Mild:

Annie has 2 cakes. She wants to share them equally between 10 people. What fraction of the cakes will each person get?

There are ____ cakes.

They are shared equally between ____ people.

Each person has $\frac{\square}{\square}$ of the cake.

____ \div ____ = ____

What fraction would they get if Annie had 4 cakes?

Spicy:

Odd One Out

Which is the odd one out?

Explain your answer.

ANSWERS:

How many tenths make a whole? 10

When I am writing tenths, the denominator is always 10

$$\begin{aligned} 3 \div 10 &= \frac{3}{10} \\ 4 \div 10 &= \frac{4}{10} \\ 5 \div 10 &= \frac{5}{10} \\ 6 \div 10 &= \frac{6}{10} \end{aligned}$$

$$\begin{aligned} \text{a. } \frac{2}{10} &= 2 \div 10 & \text{c. } 0 \div 10 &= \frac{0}{10} \\ \text{b. } \frac{9}{10} &= 9 \div 10 & \text{d. } 10 \div 10 &= \frac{10}{10} \end{aligned}$$

ANSWERS:

Mild:

Annie has 2 cakes. She wants to share them equally between 10 people. What fraction of the cakes will each person get?

There are 2 cakes.

They are shared equally between 10 people.

Each person has $\frac{2}{10}$ of the cake.

$$2 \div 10 = \frac{2}{10} / 2 \text{ tenths}$$

What fraction would they get if Annie had 4 cakes? $\frac{4}{10}$

Spicy:

Odd One Out

Which is the odd one out?

Explain your answer.

This representation is not a tenth, it is an eighth.
