Clarendon Junior School

Use websites for Design Technology

Please find below a list of useful websites for DT.

It is worth remembering that DT is about the design process as much as the making, so whilst it may be tricky during home learning to access the necessary resources to make they can still complete aspects of design.

https://www.kapowprimary.com/ They have made a selection of suitable topics free for home and distance learning.

https://designmuseum.org/# A great place for children to access information on key designers, from Isambard Kingdom Brunel to Vivienne Westwood (part of the KS2 curriculum). Also has a Young Design Museum section with various project ideas.

https://www.deliaonline.com/ This site is not only full of recipes but has a cookery school section which has a skills section and various lessons required for good, home cooked food.

https://www.jamieoliver.com/ Again lots of recipes but also a 'learn' section. This also links to his channel 4 programme 'Jamie: Keep cooking an Carry on.' This may be a nice way to involve all the family.

https://www.robives.com/ Lots of ideas on here for mechanisms, some are charged (£2.50 each) but he also has a blog and you can probably use the images to create a project without having to pay for instructions. He's also on Instagram with detailed plans.

https://www.sciencemuseum.org.uk/home There's a great section on here for learning – with project ideas linking science and DT. You are also able to explore the museum and some collections link well to DT, eg Teasmade.

https://www.stem.org.uk/ Loads on here – projects, home learning activities, teaching points.
