

# Making Fire Engines

**Today we will be...**

Making fire engines based on our designs.

Get out your fire engine designs that you did in the last lesson.

**Read back through your design to remind yourself of what you need to do!**

**BACK**

**NEXT**

# Find a partner!

Discuss these questions with your partner about how you will make your fire engine:

**What will you do first?**

**When will you decorate your fire engine?**

**How will you put the wheels and axels together?**

**How will you attach the axels to the chassis?**

**BACK**

**NEXT**

We're going to be very busy in our classroom today and there will be lots of tools, like scissors, being used.

**How do you think we can stay safe while we're making our fire engines?**

Think, pair, share your ideas.

**BACK**

**NEXT**

**Who is ready to go and make a  
fire engine?**

# PLENARY

Have a really careful look at your fire engine. Before you say that it's finished, think about these questions...

**Is there anything you can do to make your fire engine even better?**

**Is the decoration neat or are there patchy areas you can improve?**

**Is everything joined securely or can you make them more secure?**
