

Addition

Objective and strategies	Concrete	Pictorial	Abstract
Combining two parts to make a whole: part whole model	Use cubes to add two numbers together as a group or in a bar.	Use pictures to add two numbers together as a group or in a bar.	4 + 3 = 7 10= 6 + 4 Use the part-part whole diagram as shown above to move into the abstract.
Starting at the bigger number and counting on	Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer.	12 + 5 = 17 10 11 12 13 14 15 16 17 18 19 20 Start at the larger number on the number line and count on in ones or in one jump to find the answer.	Place the larger number in your head and count on the smaller number to find your answer.

			We make the diffe
Regrouping to make 10.	6 + 5 = 11	Use pictures or a number line. Regroup or partition the smaller number to make 10.	7 + 4= 11 If I am at seven, how many more do I need to make 10. How many more do I add on now?
	Start with the bigger number and use the smaller number to make 10.	9 + 5 = 14	
Adding three single digits	4 + 7 + 6= 17 Put 4 and 6 together to make 10. Add on 7.		4+7+6 = 10+7 = 17 Combine the two numbers that make 10 and then add on the remainder.
	Following on from making 10, make 10 with 2 of the digits (if possible) then add on the third digit.	Add together three groups of objects. Draw a picture to recombine the groups to make 10.	

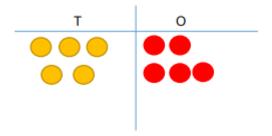

method- no regrouping	24 + 15= Add together the ones first th tens. Use the Base 10 blocks moving onto place value cour		blocks first before		
		т	0		

Т	0		
		I @	
		0000	0000
		<u> </u>	00000

After practically using the base 10 blocks and place value counters, children can draw the counters to help them to solve additions.

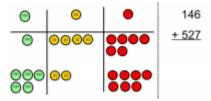

Calculations

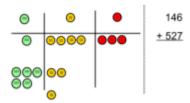

21

+ 42

Column method regrouping Make both numbers on a place value grid.

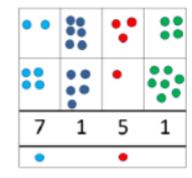

Add up the units and exchange 10 ones for one 10

Add up the rest of the columns, exchanging the 10 counters from one column for the next place value column until every column has been added. This can also be done with Base 10 to help children clearly see that 10 ones equal 1 ten and 10 tens equal 100. As children

Children can draw a pictoral representation of the columns and place value counters to further support their learning and understanding.

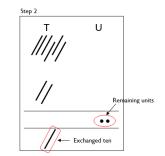

e.g. 65 + 27

Step 1

T

U

//////

Start by partitioning the numbers before moving on to clearly show the exchange below the addition.

As the children 11 move on, introduce decimals with the same number of decimal places and different. Money can be used here.

move on to decimals, money and decimal place value counters can be used to support learning.

	We make me a
72.8 + 54.6 127.4 1 1	+ £ 2 3 . 5 9 + £ 7 . 5 5 - £ 3 1 . 1 4

Subtraction

Objective and strategies Con	oncrete	Pictorial	Abstract
------------------------------	---------	-----------	----------

Taking away ones	Use physical objects, counters, cubes etc to show how objects can be taken away. 6-2=4	Cross out drawn objects to show what has been taken away.	18 -3= 15 8 - 2 = 6
Counting back	Make the larger number in your subtraction. Move the beads along your bead string as you count backwards in ones.	Count back on a number line or number track 9 10 11 12 13 14 15	Put 13 in your head, count back 4. What number are you at? Use your fingers to help.
	Use counters and move them away	Start at the bigger number and count back the smaller number showing the jumps on the number line.	
	from the group as you take them away counting backwards as you go.	This can progress all the way to counting back using two 2 digit numbers.	

	0	_	We make the diff
Find the difference	Compare amounts and objects to find the difference. Use cubes to build towers or make bars to find the difference Use basic bar models with items to find the difference	Count on to find the difference. Comparison Bar Models Comparison Bar Models Comparison Bar Models Comparison Bar Models Lisa is 13 years old. Her sister is 22 years old. Find the difference in age between them. 13 ? Lisa Sister	Hannah has 23 sandwiches, Helen has 15 sandwiches. Find the difference between the number of sandwiches.
Part Part Whole Model	Link to addition- use the part whole model to help explain the inverse between addition and subtraction. If 10 is the whole and 6 is one of the parts. What is the other part? 10 - 6 =	Use a pictorial representation of objects to show the part part whole model.	Move to using numbers within the part whole model.
Make 10	Make 14 on the ten frame. Take away the four first to make 10 and then takeaway one more so you have taken away 5. You are left with the answer of 9.	13 - 7 = 6 Start at 13. Take away 3 to reach 10. Then take away the remaining 4 so you have taken away 7 altogether. You have reached your answer.	16 – 8= How many do we take off to reach the next 10? How many do we have left to take off?

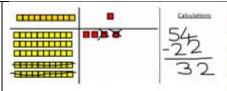

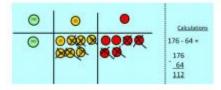

Use Base 10 to make the bigger number then take the smaller number away.

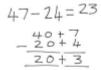

Show how you partition numbers to subtract. Again make the larger number first.

Draw the Base 10 or place value counters alongside the written calculation to help to show working.

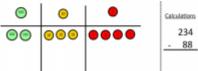

This will lead to a clear written column subtraction.

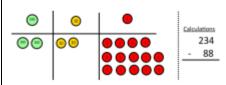

Column method with regrouping

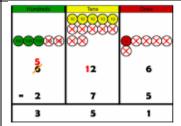

Use Base 10 to start with before moving on to place value counters. Start with one exchange before moving onto subtractions with 2 exchanges.

Make the larger number with the place value counters

Start with the ones, can I take away 8 from 4 easily? I need to exchange one of my tens for ten ones.

Draw the counters onto a place value grid and show what you have taken away by crossing the counters out as well as clearly showing the exchanges you make.

When confident, children can find their own way to record the exchange/regrouping.

Just writing the numbers as shown here shows that the child understands the method

and knows when to exchange/regroup.

Children can start their formal written method by partitioning the number into clear place value columns.

Moving forward the children use a more compact method.

This will lead to an understanding of subtracting any number including decimals.

 	We make the diffe
Now I can subtract my ones.	5 12 1

Now look at the tens, can I take away 8 tens easily? I need to exchange one hundred for ten tens.	
© Calculations 234 - 88	
Now I can take away eight tens and complete my subtraction	
© 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0	
Show children how the concrete method links to the written method alongside your working. Cross out the numbers when exchanging and show where we write our new amount.	

_			We make the	ате
Objective and strategies	Concrete	Pictorial	Abstract	
Doubling	Use practical activities to show how to double a number.	Double 4 is 8	16 10 6 1 x2 1 x2 20 12 Partition a number and then double each part before recombining it back together.	
Counting in multiples	Count in multiples supported by concrete objects in equal groups.	Use a number line or pictures to continue support in counting in multiples. 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 75 85 67 60 61 62 63 64 55 66 67 68 69 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100	Count in multiples of a number aloud. Write sequences with multiples of numbers. 2, 4, 6, 8, 10 5, 10, 15, 20, 25, 30	

Repeated addition	Use different objects to add equal groups.	There are 3 plates. Each plate has 2 star biscuits on. How many biscuits are there? 2 add 2 add 2 equals 6 5 + 5 + 5 = 15 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 1 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30	Write addition sentences to describe objects and pictures.
Arrays showing commutative multiplication	Create arrays using counters/ cubes to show multiplication sentences. e.g. 4 rows of 6 = 24	Draw arrays in different rotations to find commutative multiplication sentences. 4×2=8 2×4=8 4×2=8 Link arrays to area of rectangles.	Use an array to write multiplication sentences and reinforce repeated addition. 5 + 5 + 5 = 15 3 + 3 + 3 + 3 + 3 = 15 5 x 3 = 15 3 x 5 = 15

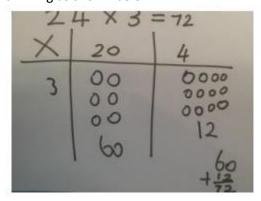

Grid Method Show the link with arrays to first introduce the grid method. 4 rows of 10 4 rows of 3 Move on to using Base 10 to move towards a more compact method. 4 rows of 13 Move on to place value counters to show how we are finding groups of a number.We are multiplying by 4 so we need 4 rows. Calculations 4 x 126 Fill each row with 126. 4 x 126 Add up each column, starting with the ones making any exchanges needed.

Then you have your answer.

Children can represent the work they have done with place value counters in a way that they understand. They can draw the counters, using colours to show different amounts or just use circles in the different columns to show their thinking as shown below.

Start with multiplying by one digit numbers and showing the clear addition alongside the grid.

×	30	5
7	210	35

$$210 + 35 = 245$$

Moving forward, multiply by a 2 digit number showing the different rows within the grid method.

	10	8
10	100	80
3	30	24

Х	1000	300	40	2
10	10000	3000	400	20
8	8000	2400	320	16

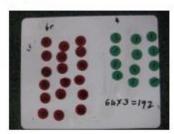

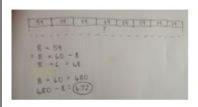

Column multiplication

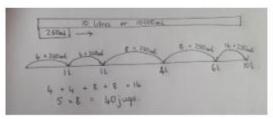

Children can continue to be supported by place value counters at the stage of multiplication.

It is important at this stage that they always multiply the ones first and note down their answer followed by the tens which they note below.

Bar modelling and number lines can support learners when solving problems with multiplication alongside the formal written methods.

Start with long multiplication, reminding the children about lining up their numbers clearly in columns.

If it helps, children can write out what they are solving next to their answer.

This moves to the more compact method.

Division

Objective and strategies	Concrete	Pictorial	Abstract
Sharing objects into groups	I have 10 cubes, can you share them equally in 2 groups?	Children use pictures or shapes to share quantities. 8 ÷ 2 = 4	Share 9 buns between three people. $9 \div 3 = 3$
Division as grouping	Divide quantities into equal groups. Use cubes, counters, objects or place value counters to aid understanding. 96 + 3 = 32	Use a number line to show jumps in groups. The number of jumps equals the number of groups. $ \begin{array}{cccccccccccccccccccccccccccccccccc$	28 ÷ 7 = 4 Divide 28 into 7 groups. How many are in each group?

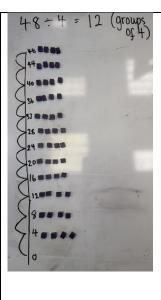

Division within	A Laboratoria		Find the inverse of multiplication and
arrays	Link division to multiplication		division sentences by creating four
	by creating an array and thinking		linking number sentences. 7 x 4 = 28
	about the number sentences that can be created. Eg $15 \div 3 = 5$ $5 \times 3 = 15$ $15 \div 5 = 3$ $3 \times 5 = 15$	00000	$4 \times 7 = 28$ $28 \div 7 = 4$ $28 \div 4 = 7$
		Draw an array and use lines to split the array into groups to make multiplication and division sentences.	
Division with a remainder	14 ÷ 3 = Divide objects between groups and see how much is left over	Jump forward in equal jumps on a number line then see how many more you need to jump to find a remainder.	Complete written divisions and show the remainder using r.
		0 4 8 12 13	29 ÷ 8 = 3 REMAINDER 5 ↑ ↑ ↑ ↑ dividend divisor quotient remainder
		Draw dots and group them to divide an amount and clearly show a remainder.	
	₩.	remainder 2	

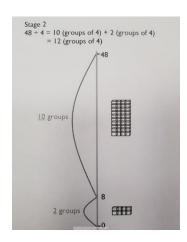

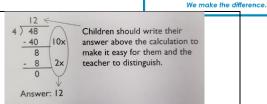

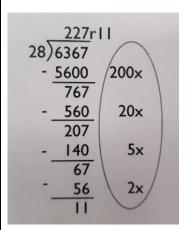

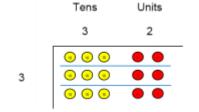

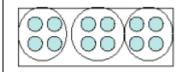

If children have full conceptual understanding and are proficient with Chunking method, they may be taught short and long division

Short division

Use place value counters to divide using the bus stop method alongside

Students can continue to use drawn diagrams with dots or circles to help them divide numbers into equal groups.

Begin with divisions that divide equally with no remainder

Move onto divisions with a remainder.

_	
◎◎◎◎ ••	Calculations 42 ÷ 3
42 ÷ 3=	
Start with the biggest place	value,
we are sharing 40 into thre	e groups.
We can put 1 ten in each g	roup and
we have 1 ten left over.	
<u> </u>	
60	
We exchange this ten for to	en ones
and then share the ones ed	qually
among the groups.	
0 0000	
We look how much in 1 gro	oup so the
answer is 14.	

Encourage them to move towards counting in multiples to divide more efficiently

8 6 r 2

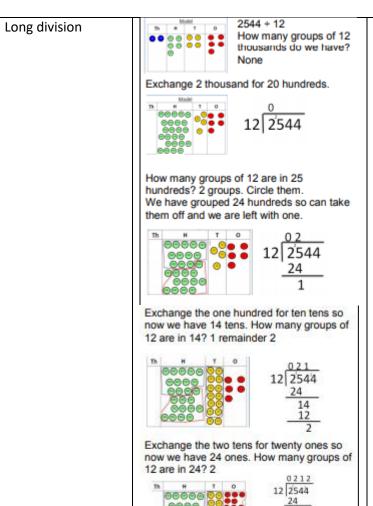

Finally move into decimal places to divide the total accurately.

We make the difference.

Instead of using physical counters, students can draw the counters and circle the groups on a whiteboard or in their books.

Use this method to explain what is happening and as soon as they have understood what move on to the abstract method as this can be a time consuming process.
