

# PLANETAJO7

Have you ever wondered what it is like on another world?

Well now you can find out what it is like! This planet is in the Milky Way Galaxy! It is 15 metres from its star and it takes 2 days to orbit it! Read on to find out about this planet which is out of this world!

## Appearance and terrain

This planet is purple, pink and blue and has pink and blue that can kill you by poisoning you. The planet without the bumps is a perfect sphere shape. Around planet AJO7 there is a massive ring made out of helium gas. AJO7 is a very rocky and is 13,000km in diameter! ITS THE SAME SIZE AS EARTH CAN YOU BELIVE IT! It also has its own star called blaze11! If you couldn't tell by its name balze11 is a very hot star.

## Climate and atmosphere

When it is raining, it rains shards of iridescent ice (which

sounds nice but it isn't) The good part is that AJO7 has its own sun so sometimes it is sunny aswell.

## Life on planet

Planet AJO7 has only a bit a wild life for example green spiders, illuminous yellow beetles and purple ants. They all live in one big burrow.

## Interesting facts

- . In 1956, Dr George discovered planet AJO7 and became famous.
- . It is the bumpiest planet and the only planet made out of boxite.
- . No human beings can land on there because they will die.
- . At night time, you can see it from miles away.
- . It will not last long sadly because it will eventually disintegrate.
