

Planet

Blossomary

Have you ever wondered what it would be like if you were on a different planet? Well then, read on to experience something out of this world...

Where in space

In the Milky Way galaxy, Blossomary is located near to where Earth is. It's the neighbour of Blossomary. It takes 100 days for Blossomary to orbit its star while the star orbits the Sun. The stars name is Glister and Glister is the second biggest star. A day for Blossomary is 24 hours but not like our planet Earth exactly. Also, Blossomary is 50 light years away from earth (which is 214 trillion miles away)

Appearance and terrain

This planet has a lot of pink vegetation. If you were wondering, I meant that all the vegetation is actually the colour pink. The water on this planet is red so that means that all the oceans, rivers, lakes, ponds and even the rain is red. Coming from the name, the planet is full of blossom trees. That's why it's called Blossomary. Most scientists believe that it might be the second biggest planet of all time!

Climate and atmosphere

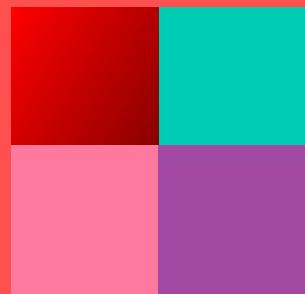

On this planet, one side would be boiling hot because that side would be closer to the Sun. However, one side is slightly colder. Luckily, the planet has a thick atmosphere so humans can walk on it. There are purple mist clouds on the slightly cold side.

Life on the planet

This planet is full of cats that are really loveable, cute and adorable. Mean cat are really rare. If you're lucky enough, you could find other cute animals like koalas, pandas and bunny rabbits. There are also quite a lot of birds. Probably about the same amount of birds as earth but scientists haven't found out yet!

Did you know?

- Did you know that there is a population of 90,000 cats on this planet?
- Did you know that this planet was discovered on the 31 October (which is Halloween) though it is not so spooky?
- Did you know that this planet was discovered by Mr. Johnwick?
- Did you know on this planet, every single cat is either red, turquoise, pink or purple?
