

PLANET +--2212BC4+XXL

Have you ever wondered what it is like in another planet well read this then?

Appearance and terrain

The planet +--2212bc4+xxl is in the Hubble galaxy on the edge (which means that it is sort of in the bubble). The solar system that planet +--2212bc4+xxl is in has 3 suns and the main one is a red super giant. On the east and west sides of planet+--2212bc4+xxl it has a hot and cold side. On the cold side there is a mountain called mount fudge but on the hot side there is a volcano called death and every day a bit of mount fudge is ripped off. In the middle of planet +--2212bc4+xxl it has a massive storm which is as big as 100 Earths. Planet +--2212bc4+xxl is just like earth but the storm. Planet+--2212bc4+xxl has 10x more resources and 10x bigger food.

Climate and atmosphere

On planet +--2212bc4+xxl, it has loads of asteroid showers which is beater. On planet +--2212bc4+xxl the temperature on the hot side can go up to 20-57 degrees. On the cold side it can go down to 30-10 degrees cold.

Life on planet

At day time, the Yezeis come out to hunt for fruit and veg but this was before the human's come. They destroyed their homes but there is a rumour that there is one left
