

Planet HAT-X10

Do you want to become an expert on planet HAT-X10? Well read on and learn more about this amazing planet.

Spatial context (where is it in space)

Planet HAT-X10 is in a galaxy called Andromeda-X and it is also 1million light years away. And amazingly it has 10 moons.

Appearance and Terrain

Weirdly, around the edge of the planet, there are spikes. Scientists believe that it is to do with not letting us humans on planet HAT-X10. Also there have been sightings of lakes people believe there is life on the planet and we think they live underground because only one has been spotted yet.

Climate and Atmosphere

Shockingly, it rains sulphuric acid at night and at day it rains scorching hot lava. At night the temperature can drop to -1000°c and at day it can go up to 1000°c . Most of the time the plants shrivel up it gets that hot in the day.

Life on Planet

On planet HAT-X10, there are different types of dragons and only one spotted we call this the magma dragon and is the biggest living thing ever... It spits out lava hotter than ever and uses its tail to attack. It has one bulbous eye and seventeen razor like claws its tail is the size of a great white shark.
