

Planet Floss

Have you ever wondered about Planet Floss if so read on to find out more about this amazing planet.

Planet Floss is the biggest planet in the universe. It has 4 moons: Eris, Mada, Alpha, and the silver circle .Its galaxy the 1.2.6 nebula is 6.8 billion light years away from earth. It orbits a star 8000 suns bigger than it.

Appearance and terrain

Its diameter is 1.35 trillion km its surface is very rocky on the hot side and icy on the cold. It has 2 hurricanes every year and that's the same with volcanos but nothing happens in the river. The hot side is red and the cold side is blue.

Climate and atmosphere

On the hot side can go far over 800 degrees and on the hot side and on the cold side go far below – 800 degrees. It is 100 percent certain that there will be 2 storms every week. It has a thick atmosphere. Hurricanes can last up to 2 Weeks however volcanos only last a couple days

Life on planet

There are plants that eat people in under 10 seconds – that's 6 people every minute. In 2012 scientists found a weird creature. There still trying to find out how many there are. It was found on the cold side going to a river. But they did find out that it is was a buffalo with 2 arms and 2 legs.

Interesting facts

1. It takes 16 light years to orbit its star
2. It would take 1,000,00 years to circle it 1 time
3. In 2.5 billion years it will crash into its biggest star
4. It was discovered in 2000

Hopefully you are now an expert about Planet Floss.
