Dear Parent / Guardian,

We have had an outbreak of Chickenpox in school over the past week. The following advice has been sent to us from The Health Protection Team.

Chickenpox

Chickenpox is a mild and common childhood illness that most children catch at some point. It causes a rash of red, itchy spots that turn into fluid-filled blisters. They then crust over to form scabs, which eventually drop off. To prevent spreading the infection, keep children off nursery or school until all the spots have crusted over. For most children, chickenpox is a mild illness that gets better on its own. But some children can become more seriously ill and need to see a doctor. Contact your GP straight away if your child develops any abnormal symptoms, for example:

- if the blisters on their skin become infected
- if your child has a pain in their chest or has difficulty breathing

Handwashing is one of the most important ways of controlling the spread of infections, especially those that cause diarrhoea and vomiting, and respiratory disease. The recommended method is the use of liquid soap, warm water and paper towels. Always wash hands after using the toilet, before eating or handling food, and after handling animals. Cover all cuts and abrasions with waterproof dressings

Thank you in anticipation of your support.

Mrs Caroline Patterson
Principal
