Enquire Learning Trust Gender Pay Gap Report Report to Trustees: 26th March 2018

The Equality Act 2010 (Specific Duties and Public Authorities) Regulations 2017 places the requirement on organisations with over 250 employees (on the 31 March of a given year) to publish specific information on their 'gender pay gap'. The gender pay gap shows the difference between the average (mean and median) earnings of males and females. This is expressed as a percentage of men's earnings (i.e. women earn 15% less than men).

The gender pay gap is different to equal pay. Equal pay looks at the pay differentials between males and females carrying out the same or similar work. The gender pay gap looks at average earnings regardless of role, therefore enabling us, as an organisation, to identify potential issues and barriers within the workforce with the view to addressing such issues and thereby closing the gap. These include things such as identifying any potential obstructions to females entering leadership positions.

The information required to be published is as follows:

- Employee numbers divided in to four quartiles (apportioning percentages of males and females)
- The mean pay of males and females
- The median pay of males and females
- The mean of bonus pay for males and females
- The median of bonus pay for males and females

As a Trust, we are confident that men and women are paid the same rate for the same work. All teaching staff are paid in line with the School Teachers Pay and Conditions Document, and in line with nationally set pay scales, regardless of gender. All teachers are able to progress through the pay structure on an annual basis through the Trust's performance management process, which ensures that pay progression is strictly linked to performance. Trust observation, appraisal and enquiry processes and procedures mean that all pay and appraisal related decisions are validated and therefore no bias can have an effect on the salary of any individual. Pay progression statistics are monitored each year following the appraisal cycle, to ensure that no particular groups of staff are disadvantaged throughout the process and this information is shared with our trade union representatives. Support staff are all employed on pay scales that were set through the Local Authority's job evaluation process, which takes in to account the roles responsibilities to allocate a pay rate to anyone holding that position, regardless of gender. Again, support staff are (where applicable) able to progress through the pay spine through the performance management process.

The four quartiles

Our 1565 employees were ordered by rate of hourly pay and then split in to three equal segments of 391 employees and one segment of 392 employees. Where one hourly rate overlapped between two quartiles, the number of males and females were divided evenly between the two quartiles.

The below table demonstrates the number of employees falling within each quartile.

	No of Males	% Males	No of Females	% Females	Total No of Employees
Lower quartile	9	2.55%	383	97.45%	392
Middle lower quartile	22	5.63%	369	94.37%	391
Middle higher quartile	38	9.72%	353	90.28%	391
Higher quartile	50	12.79%	341	87.21%	391
TOTAL	131	8.37%	1434	91.63%	1565

We are also required to publish the mean and median of male and female pay, and in particular, specifying by what percentage female pay differs from that of males.

	Mean	Median
Female	£12.54	£9.62
Male	£15.94	£13.25
PAY GAP (%)	<u>21.33%</u>	<u>27.40%</u>

The Office of National Statistics report that nationally, the mean gender pay gap is 17.4% and the median gender pay gap is 18.4%.

It is common that within a large proportion of organisations, there is a pay gap in favour of males. The common explanation for this is a lack of female representation in senior and leadership roles — therefore indicating a lack of progression, lack of investment in CPD, a lack of flexibility for females returning to work following maternity leave or a general 'glass ceiling' for female employees. These barriers to female progression are not applicable within the Trust and as such, our pay gap is somewhat different to the national (predominantly private sector) picture. The Trust encourage the progression of females by ensuring that CPD is offered consistently to all employees, that wherever possible flexible working requests are approved, that ways of working are family friendly and that current middle leaders (the majority of which are female) are given the opportunity to develop and progress internally.

The pay gap within Enquire is caused not by a lack of female representation in the higher salary points, but rather, a significant lack of male representation in the lower salary points. As of 31st March 2017, the Trust employed 29 people in to the positions of Principal or Head of School. Of these 29 employees, only 7 of them were male. This means that almost 75% of the highest level of leadership possible within academies were held by female employees. Additionally, this picture is reflective of the same position for Vice Principals. Our gender pay gap is reflective of the fact that only 9 employees within the lowest quartile are male, and only 22 employees within the middle lower quartile are male. Only 31 males are paid lower than the half way point, whereas the same salary range includes 751 females. The below outlines the roles included within each quartile.

Quartile:	Roles included within the Quartile:
Lower quartile	Midday Supervisor
	Cleaning Staff
	Catering Assistant
	Apprentice
Middle lower quartile	Catering Assistant
	Senior Cleaning Staff
	Senior Midday Supervisor
	Teaching Assistant Level 2
	Teaching Assistant Level 3
	Central Team Staff
Middle higher quartile	Higher Level Teaching Assistant
	Unqualified Teacher
	Newly Qualified Teacher
	Site/Facilities Staff

	Central Team Staff
Higher quartile	Site/Facilities Manager
	Business Manager
	Teaching Staff
	Leadership
	Central Team Staff

The roles taking up the largest proportion of the lower two quartiles are those of midday supervisors and teaching assistants. Almost all of these roles are part time (less than 37 hours per week), and we already know that nationally, females are at least 75% more likely to hold part time positions. This statistic doesn't take in to account that education (particularly primary education) always holds a much lower bar for male representation. All roles within the Trust are advertised in the same manner, on the same websites (with the exception of leadership posts) and all adverts are always gender neutral.

The national picture is that only 15% of primary school teachers are male – which is representative of our own workforce. A significant proportion of our teaching staff are female, and pay rates amongst males and females are very much aligned due to the national terms and conditions. Additionally, 100% of our Business Managers are female, and almost 75% of our most senior leaders are female. The issue really does come down to the recruitment of males in the roles within the lower quartiles. However, our picture is very much aligned with other multi-academy Trusts and local authority schools.

We are also required to publish information on bonus pay for males and females within the Trust, and work out mean and median gaps in such pay. As an organisation we do not pay bonuses and as such our response to this section will be a nil return.
