By car: A pay & display car park is a five minute walk away on Pritchatts Road

UNIVERSITY OF
BIRMINGHAM

18 March 11:00-16:00

Neuroscience for young and old

**All day activities, games and fun in the
Medical School, 1st floor Atrium**

Neuroscience is not rocket science! Everyone can understand it.

Do you want to know where your best memories are tucked away in your brain?

Do you want to see what your brain looks like? How about a mouse brain?

Do you want to know how the nerve cells talk to each other when you are thinking?

Do you ever think about why you draw like your father or think like your mother?

Do you know how a bicycle helmet protects your brain? Could one save Humpty Dumpty?

Join us in the fun and games to find out!

Finding Beauty in the Brain. Dr. Greg Dunn. Digital Exhibition

Greg Dunn is a neuroscientist and visual artist. His art captures the dazzling beauty of the cellular architecture of our nervous system, a scintillating opera of lights and impulses of millions of nerve cells of the reflecting brain. All presented with amazing elegance and technical finesse.
