

Cycle, scoot or walk instead of driving

OK... this is easier said than done, especially on a wet and windy school morning when it is so easy to jump in the car. BUT car pollution is one of the major causes of global warming - cars emit carbon dioxide and other nasty greenhouse gases which contribute to global warming and ultimately climate change. So next time you're being nagged by your children to scoot to school, remember you're doing your bit for the environment too! Also, a reminder that we have bike and scooter stands near the main entrance, where you can secure them during the day.
