

Year 2 - Summer 1 - Plants

Plants that grow from seeds

watermelon

avocado

sunflower

pumpkin

Plants that grow from bulbs

tulip

daffodil

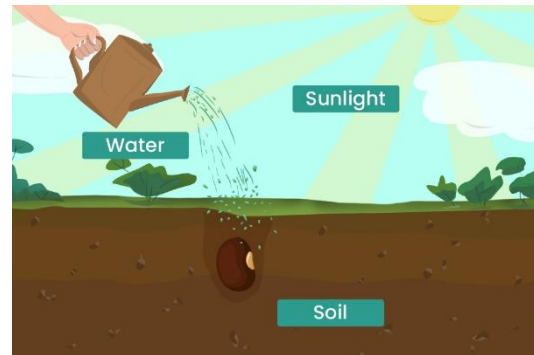

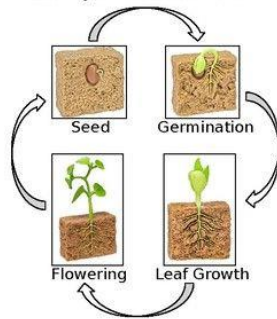

onion

crocus

Life Cycle of a Bean Plant

Key Facts

Seeds and **bulbs** contain food which gives plants the energy to start growing under the surface of the soil.

A **shoot** grows upwards from the seed or plant towards sunlight.

Plants take both **nutrients** and **water** from the soil through their **roots**.

Key Vocabulary

Seed	A tiny plant in a protective case that grows into a new plant.	Sunlight	All plants need light from the sun to grow. Some need lots of sunlight and others only need a little sunlight.
Bulb	The underground bud of a plant that is in resting stage.	Water	All plants need water to grow.
Germination	When the seed begins to grow into a plant.	Temperature	Some plants like cooler temperatures and others like warmer temperatures.
Dispersal	How seeds move away from the parent plant.	Nutrition	How living things get the food they need to be healthy and strong.
