# HABITATS

## Sticky knowledge facts:

Laying your eggs in a nest is much safer, because then they're better protected and can't fall out.

A habitat is a place that an animal lives in. It provides the animal with food, water and shelter. Without these things cannot survive.

There are many different kinds of forests in different climates, but trees are the one thing they have in common.

River, lakes, ponds and streams are all freshwater habitats.

Rivers, lakes, ponds and the sea are an ideal habitat for aquatic animals.

Human habitats are places where people live and where they can find all the things they
