

Our Vision

Science at Holy Family Catholic Primary School.

Our vision in science is to encourage curiosity so that the children ask questions and want to explore and investigate to find out about the world we live in.

Young children are naturally curious. We provide a stimulating EYFS curriculum that nurtures children's natural curiosity and develops their knowledge and understanding of the world around them. Through hands-on, enquiry-based activities, children will experience the joy and wonder of learning 'how' and 'why'.

We strive to ensure that this enthusiasm to learn and find out continues through key stage one and key stage two. We do this by providing exciting, practical, hands on experiences, which encourage curiosity and foster learning. Science is planned to be fun and relevant to our children.

We encourage pupils to be confident to ask questions and not to be afraid of getting things wrong, but instead viewing mistakes as an opportunity to learn and deepen understanding

We have a whole school ethos of respecting both the immediate and wider environment and community. We encourage the children to be responsible and recognise how lucky we are to have our school grounds to be used as a resource.

By providing these opportunities, we ensure that our children are motivated, confident, life-long learners who have the scientific knowledge required to understand the uses and implications of science today and in the future. We hope that they will continue to explore the world around them, way beyond their time at primary school.
