Spiritual, Moral, Social and Cultural Computing Statements

Spiritual

- Computing supports spiritual development by looking at how ICT can bring rapid benefits to discussions and respect for an individual's beliefs. However, children are also exposed to the limitations and abuse of the internet where they question and justify the aims, values and principles of their own and others' belief systems.

Moral

- Computing supports moral development by enabling our pupils to find information to support them in recognising the difference between right and wrong through investigating and then offering reasoned views about moral and ethical issues and discovering the viewpoints of others.

Social

- Computing supports social development by completing of group work within lessons as well as practical tasks. Children are required to understand about social media and the advantages these sites have brought as well as the numerous problems such as cyber bullying.

Cultural

- The development in technology has impacted different cultures and backgrounds in different ways. More developed countries are able to keep pace with the developments in technology whilst less developed ones can't. Knowledge can be shared more easily.
