

YEAR 7

Independent learning to be completed during school closure

GEOGRAPHY

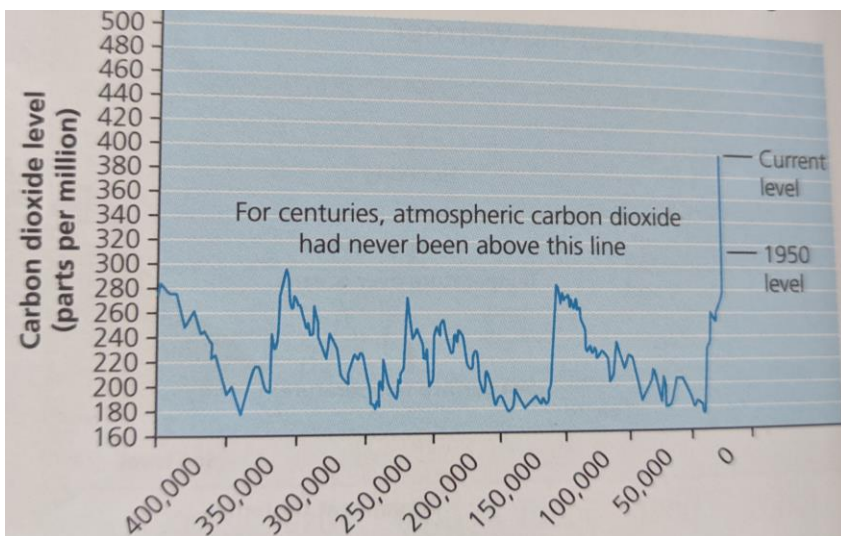

During a two week period you would ordinarily have:

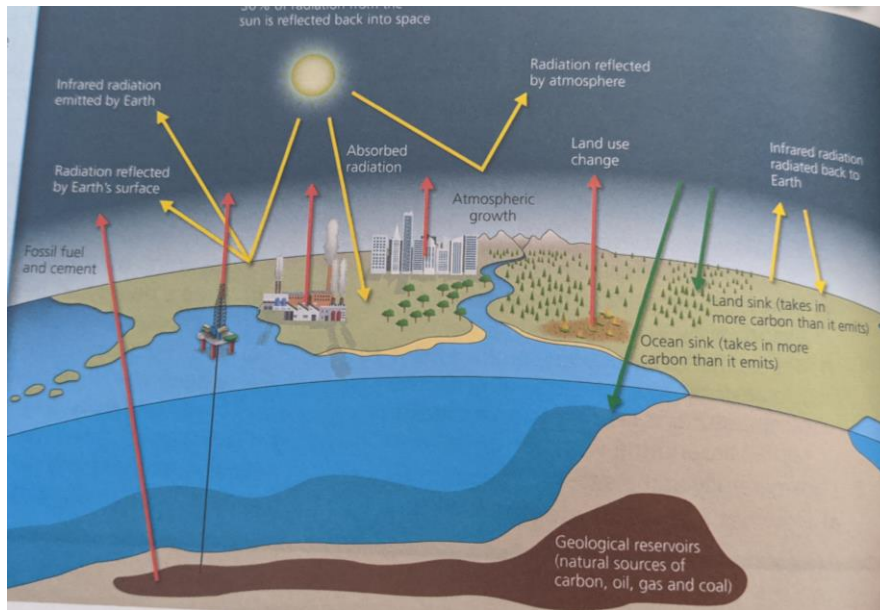

3 Geography lessons

During this fortnight we would like you to look at climate change. You can present this work as a newspaper/magazine report, poem, acrostic, poster, PowerPoint etc – be as creative as you can.

Please try to include pictures, maps, diagrams and colour!

- 1) Look at the causes of climate change – what are greenhouse gases and explain how they help keep the planet warm, describe the global levels of carbon dioxide, who contributes the most to global greenhouse emissions – create a rank order list showing which countries and regions of the world are emitting the most greenhouse gases.

2) Look at the consequences of climate change – what effects are there. Are they negative/positive?

Websites that may help you:

<https://www.natgeokids.com/uk/discover/geography/general-geography/what-is-climate-change/>

<https://climatekids.nasa.gov/climate-change-meaning/>
