

# ICT and Computing Independent Study

The following are great online platforms for practicing some of the skills that have been learned in lessons (or will be):

## Year 7

<https://scratch.mit.edu/ideas> – great to learn the basics of programming with some great tutorials (requires a free account to be set up)

## Year 8

[www.codecademy.com](http://www.codecademy.com) – great interactive tutorials for a number of programming and coding languages – we recommend the HTML and Python courses (requires a free account to be set up)

[www.w3schools.com](http://www.w3schools.com) – an alternative to codecademy. Tutorials on a number of different areas but we again would recommend the HTML and Python courses.
