

Parts of a Plant

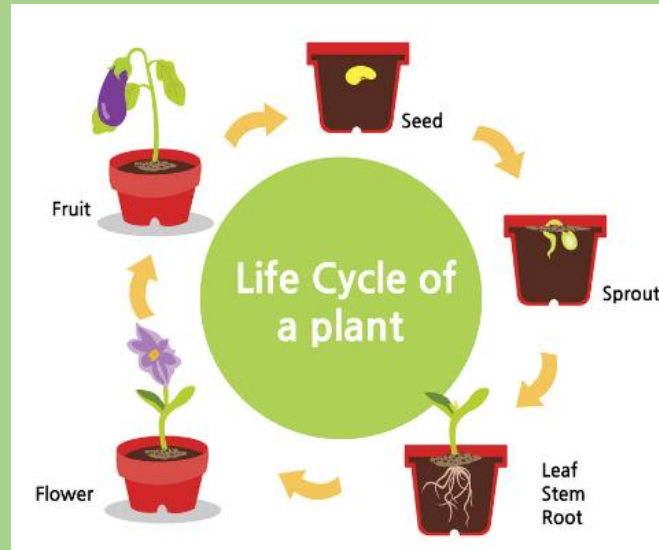

Year 3 – Plants

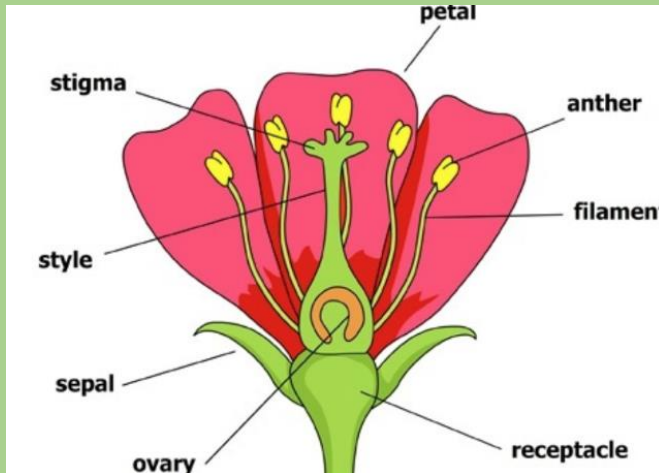

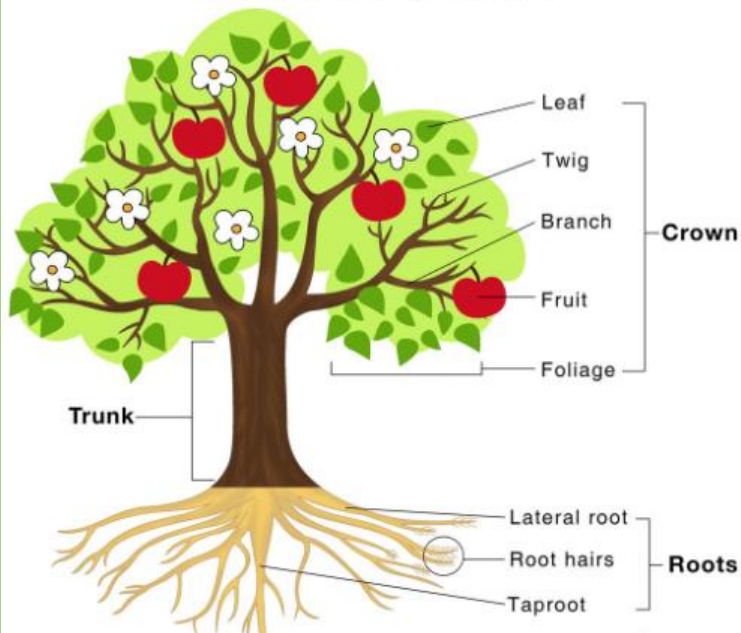

How do they grow?

What do plants need to grow, survive and be healthy?

Parts of a Tree

Vocabulary Dozen

nutrient	a substance absorbed by plants for nourishment
reproduction	the process by which an animal or plant produces smaller versions similar to itself
pollination	the transfer of pollen from the anther to the stigma
dispersal	the spreading of things over a wide area
stamen	the centre of a flower that produces the pollen
stigma	the centre part which takes in pollen
anther	part of the stamen where the pollen is collected and allowed to mature
photosynthesis	the way green plants make their food using sunlight
chlorophyll	the green substance in plants which enables it to use the energy from the sunlight in order to grow
seedling	a young plant that has grown from a seed
anchor	to fix something so it does not move
growth	to increase in physical size and development
energy	the power source that makes things work and move
flower	part of the plant which is brightly coloured and grows at the end of the stem
