

Flappy parrot

Create a game in which you guide a parrot past moving obstacles

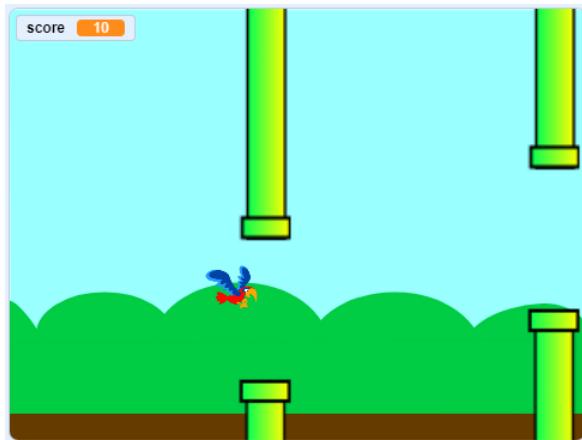

Step 1 Introduction

Create a game in which you have to guide a parrot past scrolling pipes to score points.

What you will make

You will press the space bar to make the parrot flap its wings, and score one point for every pipe that you manage to get the parrot past.

What you will need

Hardware

- A computer capable of running Scratch 3

Software

- Scratch 3 (either **online** (<https://rpf.io/scratchon>) or **offline** (<https://rpf.io/scratchoff>))

What you will learn

- How to create sprites using Vector mode
- How to use sounds
- How to detect collisions
- How to control a sprite using the keyboard

Additional notes for educators

You can find the **completed project here** (<https://rpf.io/p/en/flappy-parrot-get>).

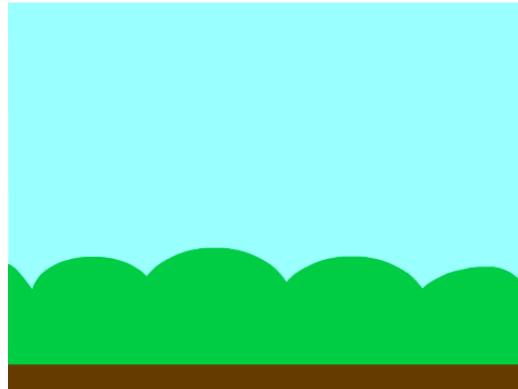

Step 2 Add the pipes

First, create the pipes.

Open a new empty Scratch project.

Add a backdrop with an outdoor landscape. 'Blue Sky' is a good choice.

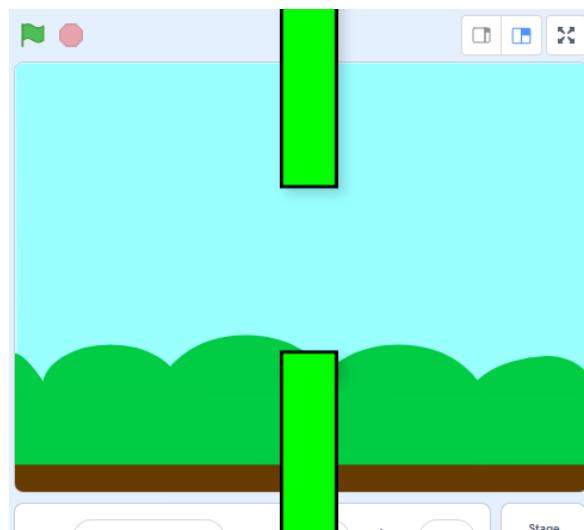

Create a new sprite and name it 'Pipes'.

The 'Pipes' sprite should be a pair of pipes with a gap in the middle. By moving the sprite up or down, you can put the gap in a different place.

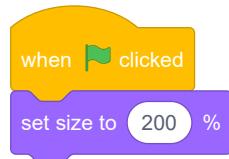

This picture shows an example of how the pipes could be positioned. The parts of the sprite outside the Stage are normally hidden, you only see them when you drag the sprite:

You can't draw a sprite as big as the pipes need to be, but you can increase the size at which the sprite shows on the Stage.

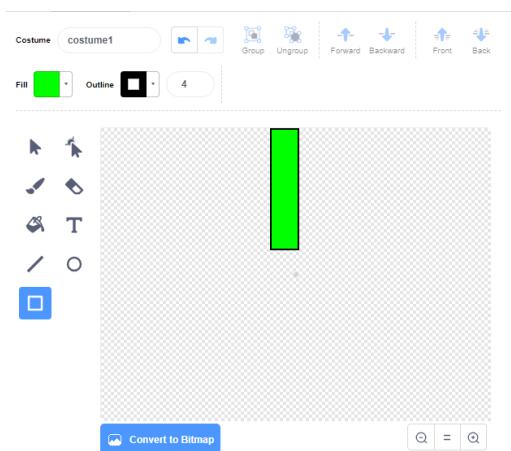

Add code to make the sprite bigger.

This makes it's easier to see how big the pipes should be.

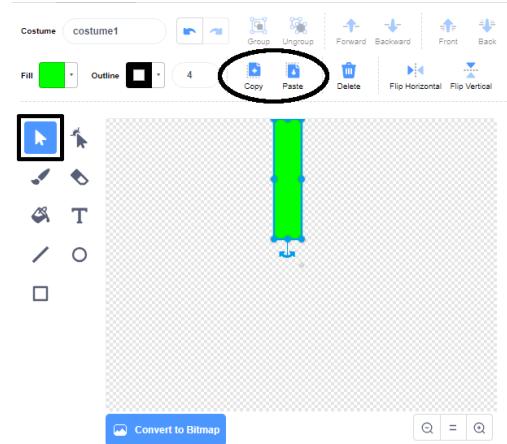

Draw a rectangle for the top pipe as shown here:

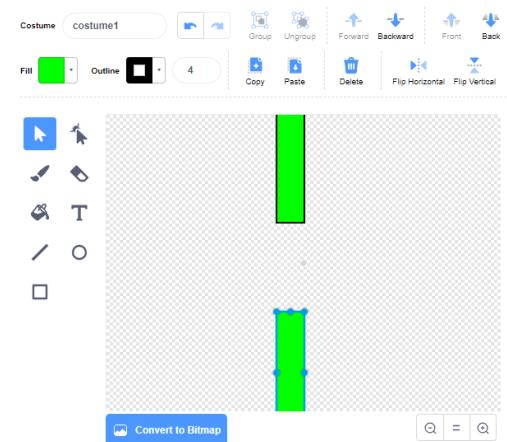

Fill the pipe with a colour you like.

Create a duplicate of the pipe by selecting it and then clicking on **Copy** and **Paste**.

Drag the copy of the pipe to the bottom of the screen so that the copy is in line with the other pipe.
There needs to be a gap between the two pipes.

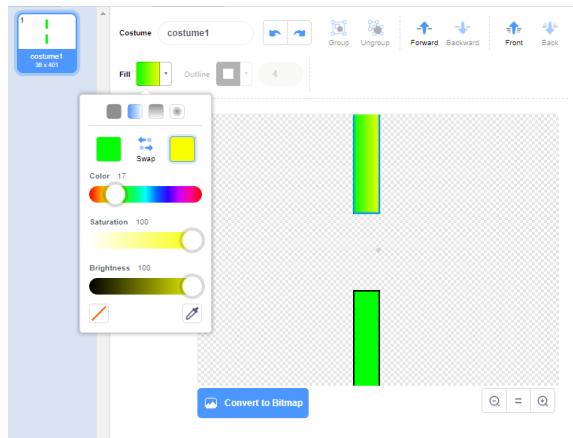

Challenge!

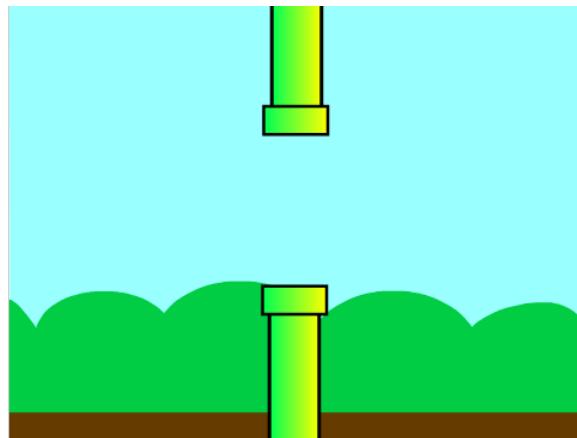

Challenge: make better pipes

Can you make your pipes look better?

- Shade your pipes with a left-to-right gradient.

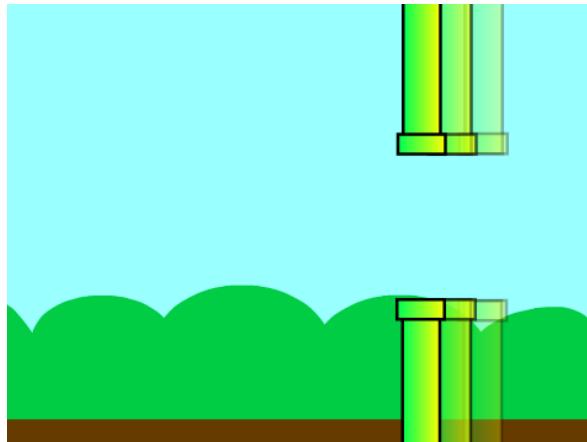

- Add extra rectangles to the ends of the pipes:

Step 3 Make the pipes move

Next you're going to make the pipes move across the screen to create an obstacle course.

First make the pipes appear by adding code to the Pipes sprite so that, **when the green flag is clicked**, the sprite **forever creates a clone of itself** every two seconds.

```
when green flag clicked
set size to 200 %
hide
forever
  create clone of myself
  wait 2 seconds
```

A Scratch script attached to the Pipes sprite. It starts with a "when green flag clicked" hat, followed by a "set size to 200%" control block, a "hide" control block, and a "forever" loop. Inside the loop, there is a "create clone of myself" control block and a "wait 2 seconds" control block.

Tip: clones are just copies of a sprite, and they are really useful for creating games.

Next make the pipes move by adding code so that, **when a clone starts**, the clone appears on the right side of the Stage and **glides** across to the left.

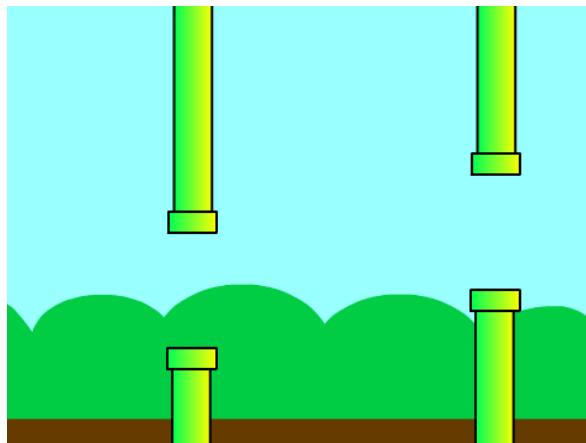

```
when I start as a clone
show
go to x: 240 y: 0
glide (4 secs) to x: -240 y: 0
delete this clone
```

Tip: you can stop the pipes scrolling by clicking the red **stop** button next to the green flag.

Now you should have lots of pipes, but their gaps are always in the same place.

You can add some variety by using a **random** number for the Pipes sprite's **y position**.

Modify your sprite's code so that each sprite clone **picks a random number from -80 to 80** and **glides** to that **y position**:

```
when I start as a clone
show
go to x: 240 y: pick random -80 to 80
glide 4 secs to x: -240 y: y position
delete this clone
```

Step 4 Make Flappy fall

Now add a sprite called Flappy and create code it so Flappy falls down the Stage. In the next step, you will add the code to make Flappy fly when you press a key.

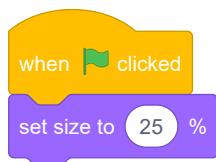

Add a new sprite that has two costumes, for 'wings up' and 'wings down', and name it **Flappy**. 

The parrot sprite is a good choice.

Flappy needs to be smaller.

Add code to **set Flappy's size to 25% when the green flag is clicked**. 

When the game starts, Flappy needs to be just left of the centre of the Stage, at coordinates -50, 0.

Add code to make Flappy go to the x and y starting position of x: -50 and y: 0.

```
when green flag clicked
set size to 25 %
go to x: -50 y: 0
```

Now make Flappy keep falling down the Stage by forever changing the sprite's y position by -3.

```
when green flag clicked
set size to 25 %
go to x: -50 y: 0
forever
  change y by -3
```

Test your code to make sure Flappy starts in the middle of the screen and falls to the bottom. When you drag Flappy to the top of the Stage, the sprite should fall again.

Step 5 Make Flappy fly

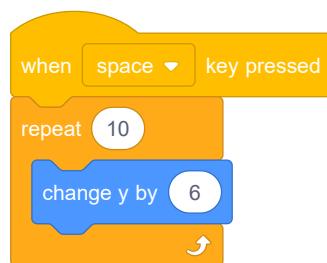

Now you will make Flappy flap upwards when you press the space bar. When you play the game, you have to time your taps to get Flappy through the gaps in the pipes.

Make Flappy fly upwards when you tap the space bar.

When the **space key is pressed**, Flappy should move upwards by **changing its y coordinate** by a small amount, for example 6. 

Flappy flies upwards by **repeating** this movement **10 times**.

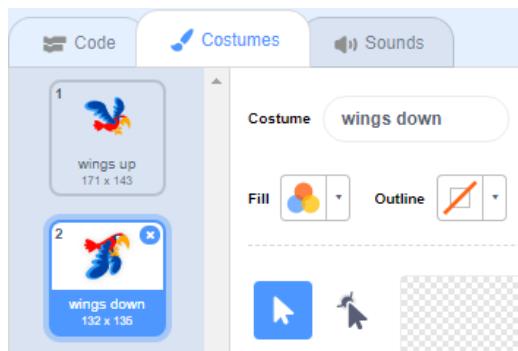

Add this code to your Flappy sprite:

```
when space key pressed
repeat (10)
  change y by (6)
end
```

Now you need to get Flappy's wings flapping!

Click on the **Costumes** tab, and name Flappy's costumes 'wings up' and 'wings down'. 

Can you make Flappy's costume change to `wings down` when you press space, and then change it back to `wings up` halfway through the upward movement? 

Your code should look like this:

```
when space key pressed
  switch costume to wings down
  repeat (5)
    change y by (6)
  end
  switch costume to wings up
  repeat (5)
    change y by (6)
  end
```

A Scratch script starting with a "when space key pressed" hat block. It contains two "repeat (5)" control blocks. Each repeat loop has a "switch costume to wings down" or "switch costume to wings up" costume block, followed by a "change y by 6" motion block.

Test your code. As you see, at the moment nothing happens if you let Flappy hit a pipe. 

Step 6 Detect collisions

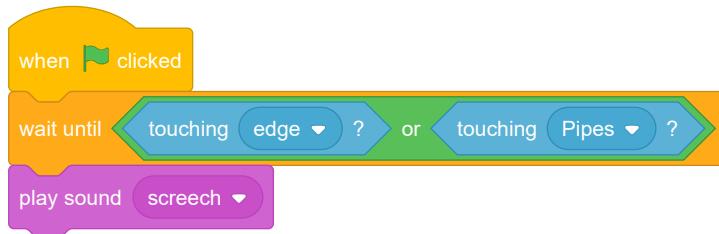

To make the game a challenge, the player needs to guide Flappy through the gaps without letting the parrot touch the pipes or the edges of the Stage. You need to add some blocks to detect when Flappy hits something.

This is called **collision detection**.

Import a sound from the library that you want to play when Flappy collides with something. The 'screech' sound is a good choice. 

A **wait until** block is necessary to check whether Flappy is **touching the pipes** or **touching the edge**.

Add a new **when green flag clicked** block to the 'Flappy' sprite, and also add the following code: 

Test your code. If Flappy touches a pipe, the 'screech' sound should play. 

Next, update the code so that the game stops when Flappy hits a pipe.

Add the following code to stop the game after a collision is detected:

```
when green flag clicked
  wait until touching edge ? or touching Pipes ?
  play sound [screech v]
  say [Game Over!]
  broadcast [Game Over v]
  stop other scripts in sprite
```

The **broadcast** block tells other sprites that the game is over.

The **stop** block stops other Flappy scripts that are running so that Flappy stops falling after a collision.

Finally, add the following code to the **Pipes** sprite so that pipes **stop** appearing **when the sprite receives Game Over**.

```
when I receive [Game Over v]
  stop other scripts in sprite
```

Test your game and see how long you can play before it's 'Game over'!

Step 7 Add a score

The player should score a point every time Flappy makes it through a gap between pipes.

Make a new variable **for all sprites** and call it **score**.

Each 'Pipes' sprite clone should **wait until** Flappy has flown past and then increase the **score**.

First, **set score to 0** when the game begins:

```
when green flag clicked
  set [score v] to [0]
  set size to [200 %]
  hide
forever
  create clone of [myself v]
  wait [2 seconds]
```

Then add the following code to the **Pipes** sprite:

```
when I start as a clone
  wait until [ ]
```

Add more code so that, when Flappy's `x` position is greater than the pipe clone's `x` position, the `score` increases by `1` and a sound of your choice plays.

You could use the 'pop' sound if you want, or add a sound from the library, for example 'bird'.

Your code should look like this:

```
when I start as a clone
  wait until [x position v] of [Flappy v] > [x position]
    change [score v] by [1]
    play sound [pop v]
```

Test your code and make sure you score a point every time Flappy gets through a gap between pipes.

Check whether the `score` is set to `0` when you start a new game.

Challenge!

Challenge: adjust the difficulty

Is the game too hard or too easy for you? How many ways can you find to change the difficulty?

Adjust the game until you are happy with its difficulty!

Challenge!

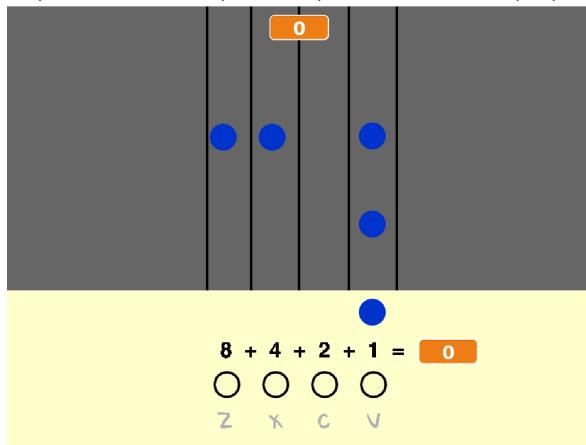

Challenge: add a high score

Can you add a high score to the game so that, in addition to keeping track of score for the current round, it keeps track of the highest score you've ever reached?

Step 8 What next?

Try the **Binary hero** (https://projects.raspberrypi.org/en/projects/binary-hero?utm_source=pathway&utm_medium=whatnext&utm_campaign=projects) project, where you will make a game in which you play the notes of a song as they scroll down the Stage.

The notes will fall from above, and you will have to press keys to “catch” and play the notes.
