

Year 11 Physics – for mock exam information, please see the website.

Our exam board is AQA.

Lots of revision resources for PHYSICS are available on Google Classroom.

Also useful are BBC Bitesize, educake.co.uk, senecalearning.com, and Physics & Maths Tutor, which is very good for past paper question practice.

If you complete any practice questions, use the mark schemes to check your answers and ensure the scientific language you are using is accepted in the mark scheme.

TOPICS to REVISE are:

1. Energy (first taught in Year 9)
2. Electricity (first taught in Year 9)
3. Particle Model of Matter (first taught in Year 10)
4. Atomic Structure (first taught in Year 10)

Key equations should be learnt and practised. Make sure you can:

- Recall and use all required equations from the AQA Physics GCSE course.
- Rearrange equations to solve problems.
- Convert units correctly (e.g. cm to m, g to kg).
- Show all working clearly in calculations.

Remember that physics exams include calculations, required practicals, and extended written answers, so make sure you revise both your knowledge and exam technique.
