

IPC Exit Point: Materials

This week we had our IPC Exit Point. We designed, constructed and evaluated a range of shelters for Teddy to sleep in. We used our prior knowledge of materials (and their properties) to think of the most suitable materials to build our shelters from.

We built shelters in the forest, the arctic and the city. We had to make sure that the materials we chose were suitable for these different climates and would be able to withstand the different climates' weather conditions.

Our Shelters:
