

Gremlin class has had an incredible term. Our IPC topic is Growing and they have learned so much about how animals and plants survive and grow in our world. We have planted Sunflower seeds and are watching the seedlings grow into flowers. We planted and grew our own cress, allowing the children to make sandwiches from home grown produce. They have all been wonderful gardeners and understand the scientific side to how plants and vegetables create their own food.

During British Science week we had the best time making robots. The children understood how the battery powered the motor, which turned the propeller. The wind from the propeller should have moved our car bot, but the batteries and the motor were too heavy!! It was trial and error and the children also understood why this happened and were incredible scientists throughout the week.

Throughout the term they have been amazing mathematicians and writers and we are so proud of them all. They have written information texts, narratives and sets of instructions and are beginning to use wonderful vocabulary to express themselves. It has been a very busy term and we very much look forward to lots of new learning in the Summer term. Well done to you all.
