

Gnome Class Web Update

05.02.20

We've had a fabulous time in IPC developing our scientific enquiry skills and conducting experiments on the human body!

Here are some pictures of us exploring the digestive system and how it works! First we learnt about the different food groups and the importance of a healthy diet. Then we made a model of the digestive system with orange juice for the stomach acid, a food bag for the stomach and tights for the intestines. We learnt what happens to your food inside your body and how our bodies use the nutrients from the food we eat.
