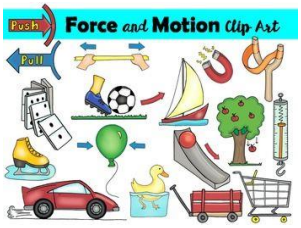
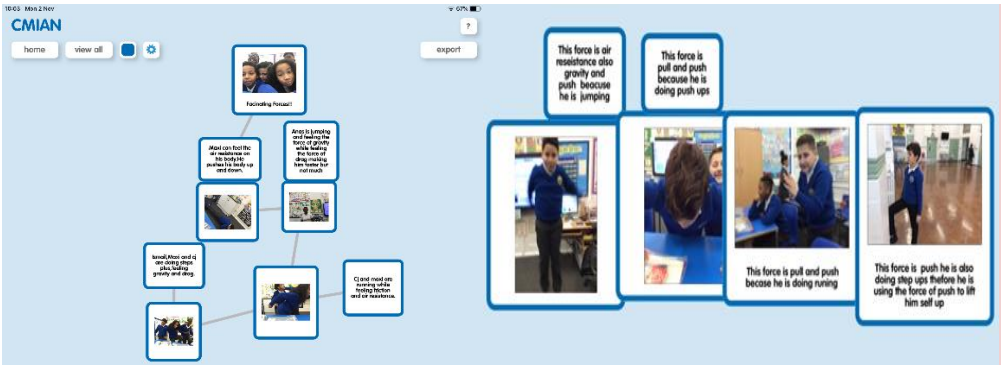
# Fascinating Forces and Full Power

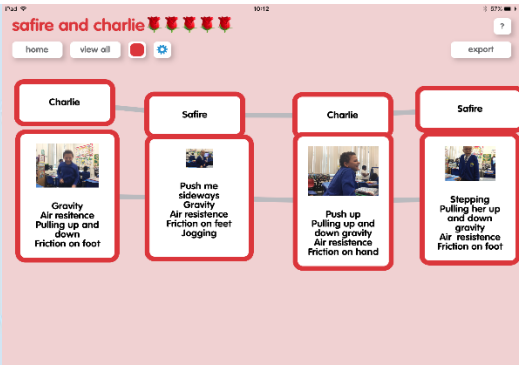
## Centaurs Entry Point



During our entry point we explored a range of forces that surround us and how they work. We began by doing a circuit of activities and identifying what forces were at play.

We then used a Poplet to take pictures of the activity and label the forces.





Next we took part in an experiment where we tried to make the ultimate and best paper plane that would travel the furthest and counteract against air resistance. We thought about the material, the design and the seize then went outside to test them.
