## ANIMALS

There are many different animals all over the world. To keep things as simple as possible, scientists came up with a way of grouping animals together.

The six main groups are:-

**Invertebrates, mammals, birds, amphibians, reptiles and fish.**

Your task:

Choose and research an animal from each of the above groups, and create a profile for each animal.

Your profile should include a picture and the following information:

- **Habitat:-** *Where the animal can be found? What environment it is best suited to? Where do they live? E.g. burrow, hive, nest etc*
- **Family & reproduction:-** *How many normally in a group or family? What is a group of them called? How long to reproduce? When during the year do they reproduce?*
- **Life span & life cycle/ development:-** *How long they live for? What is their life cycle from birth to death? What are the young called? How many young born? What age do they fully develop?*
- **Behaviours:-** *How do they hunt? When they sleep and wake? Do they hibernate? Do they show intelligence, if so, how? Social or solitary? Do they migrate?*
- **Diet & Food:-** *What do they feed on/ eat? When and how often they feed? Anything that may be poisonous? Feed in packs or on their own?*
- **Adaptations for survival:-** *How do they survive? What features help them survive? E.g. camouflage etc. What are they good at that keep them alive? Any weaknesses?*
- **Fun facts:-** *List at least three interesting facts related to your animal.*

You are welcome to use the animal profile templates on the following pages or create your own. To make it more exciting, you could turn your animal profile in to a Facebook profile, curriculum vitae (CV) for a job or a job application. **I look forward to seeing your ideas!!**
