

How the Science Curriculum Supports Careers Education

Pupils are provided with an annual STEM careers fair organised by the science department. This gives them the opportunity to identify and explore employment opportunities within a range of STEM related fields, asking questions about the different companies, roles within them, qualification requirements, etc. It is an experience that pupils consistently offer positive feedback about and suggest has helped them broaden their understanding of employment opportunities within science.

Career roles are also signposted within the science curriculum as appropriate to the content being taught, e.g. chromatography might be linked to forensic investigations.
