

## Cold Environments Project

Choose a cold environment (Antarctica/parts of the Arctic/ Alaska) and create a large project on it.

This could be a detailed poster/booklet/book/leaflet/PowerPoint-you can choose!

Try and research and include:

- Location
- Map
- Climate
- Animals that live there
- How have those animals adapted to the environment?
- Plants that grow there
- How have the plants adapted?
- What are the threats to the area? E.g. global warming?  
Fishing?
