

## **Ceramic Glazes Research:**

You will need to use the internet to research ceramic glazes and create a power point which explains the following:

- What are glazes made of?
- What different ways can glazes be applied to ceramics?
- What different types of glazes are there?
- When glazes are fired, what happens physically at each stage of the firing?
- When glazes are fired, what happens chemically at each stage of the firing?
- How are the properties of the clay changed by the glazing process?
- What are crystalline glazes and how do they work?
- What are the stages of Raku Firing?

Use images and text to illustrate each point.
