

## **Ceramic Materials research:**

You will need to use the internet to research ceramic materials and create a power point which explains the following:

- How is clay forms in the landscape.
- What is clay made of.
- What uses can you find for ceramic materials that you didn't know about before starting this research.
- When clay is fired, what happens physically at each stage of the firing.
- When clay is fired, what happens chemically at each stage of the firing.
- How are the properties of the clay changed by the firing process.

Use images and text to illustrate each point.
