

**Southwold Primary
& Nursery School**

"Be all you can be and together we will shine"

Calculation Policy September 2023

Number conservation

Numicon

Overlay to make numbers in different ways

Subitise

Using a dice or Numicon

Number - addition and subtraction

add two single digit numbers

aggregation

Counters on plates

1, 2, 3, 4, 5, 6.

Bead strings or bead bars can be used to illustrate addition including bridging ten by counting on 2 then 3.

$5 + 3 = 8$

subtract two single digit numbers

reduction

Counters on plates

6 take away 1 leaves 1, 2, 3, 4, 5.

Cross out drawn objects to represent what has been taken away:

3 take away 2 is 1

Start with 3 ... 2, 1.

Number - multiplication and division

solve problems including doubling

Practically double a group of objects to find double of a number by combining then counting the two groups:

Double 4 is 8.

solve problems including halving and sharing

Sharing objects

One for you. One for me... Is it fair? How many do we each have?

15 shared between 5 is 3.

Count on to find the answer

augmentation

Practically with objects.

$5 + 2$ "Put 5 in your head, 6, 7."

Dice...

$4 + 3 = 7$

4, 5, 6, 7.

On a prepared number line (start with the bigger number)...

$2 + 4 = 6$

Count on or back to find the answer

Practically, for example:

Group objects on a table then cover some to visualize the calculation:

2 less than 4 is 2

Start with 2... 3, 4.

Coins

I had 10 pennies. I spent 4 pence. How much do I have left? Start with 10... 9, 8, 7, 6.

Grouping objects

Put groups of objects on plates.

How many groups of 4 are there in 12 stars?

understand and use vocabulary for addition

add, more, and, make, sum, total, altogether, score, double, one more, two more, ten more... how many more to make...? how many more is... than...?

is the same as

understand and use vocabulary for subtraction

take (away), leave, how many are left/left over? how many have gone? one fewer, two fewer... ten fewer... how many fewer is... than...? difference between

is the same as

understand and use vocabulary for multiplication

count on (from, to), count back (from, to), count in ones, twos... tens...

is the same as

understand and use vocabulary for division

half, halve, count out, share out, left, left over

is the same as

Tens frame or Five frame

For one more or one fewer

2 frames to move across

Part-part whole model

A representation used for adding and subtracting numbers Used to see connections between numbers

'...is the whole...is the part and ...is the part'

'How many more...?'

'_ + _ = _'

Number - addition and subtraction

represent and use number bonds up to 20

Start with number bonds to 10 then build. Use a wide range of objects (including fingers!) and images to model the bonds, e.g. interlocking cubes.

$0 + 7 = 7$  $7 = 7 + 0$
 $1 + 6 = 7$  $7 = 6 + 1$
 $2 + 5 = 7$  $7 = 5 + 2$
 $3 + 4 = 7$  $7 = 4 + 3$

represent and use number bond facts related subtraction up to 20

Start with number bonds to 10 then build. Use a wide range of objects (including fingers!) and images to model the bonds, e.g. interlocking cubes.

$7 - 0 = 7$  $0 = 7 - 7$
 $7 - 1 = 6$  $1 = 7 - 6$
 $7 - 2 = 5$  $2 = 7 - 5$
 $7 - 3 = 4$  $3 = 7 - 4$

add one-digit and two-digit numbers to 20, including zero

Bead strings or bead bars can be used to illustrate addition including bridging ten by counting on 2 then 3.

8 + 5

On a prepared number line... $7 + 4 = 11$

On a hundred square... $3 + 4$

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40

subtract one-digit and two-digit numbers to 20, including zero

Practically with objects, fingers etc. $5 - 2$ "Put 5 in your head, 4, 3."

Taking away

Number lines (numbered and unnumbered, prepared and child constructed)

Hundred Square
17 - 3

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40

Finding the difference

Number lines (numbered and unnumbered, prepared and child constructed)

Use practical equipment (such as numicon or cuisenaire) to identify the 'difference':

"The difference between 7 and 4 is 3" or "Seven is 3 more than four".

Number - multiplication and division

count in multiples of twos, fives and tens (from number and place value)

Counting using a variety of practical resources

Counting in 2s e.g. counting socks, shoes, animals in the ark...

Counting in 10s e.g. hundred square, towers of cubes...

Use rhymes, songs and stories involving counting on and counting back in ones, twos, fives and tens.
Use 2p, 5p and 10p coins.

double numbers and quantities

Practically double a group of objects and/or quantities to find double of a number by combining then counting the two groups.
Progress onto using known facts and counting (in 1s, 2s, 5s and 10s) to double more efficiently.

group and share small quantities

Practical activities involving sharing.
Distributing cards when playing a game, putting objects onto plates, into cups, hoops etc.

Grouping

Sorting objects into 2s / 3s / 4s etc

How many pairs of socks are there?

There are 12 crocus bulbs. Plant 3 in each pot. How many pots are there?
Jo has 12 Lego wheels. How many cars can she make?

Sharing pictures / objects

12 children get into teams of 4 to play a game. How many teams are there?

Sweets are shared between 2 people. How many do they have each?

half numbers and quantities

Practically halve objects and/or quantities by sharing them out into two piles and then counting the number of objects in each pile, or cutting/folding pictures of objects in half.
Progress onto using known facts and counting (in 1s, 2s, 5s and 10s) to halve more efficiently.

read, write and interpret mathematical statements involving addition (+) and equals (=) signs

It is important that children have a clear understanding of the concept of equality, before using the '=' sign. Calculations should be on either side of the '=' to that children don't misunderstand '=' as to mean 'the answer'.

15 = 2 + 13
15 = 3 + 12

read, write and interpret mathematical statements involving and subtraction (-) equals (=) signs

It is important that children have a clear understanding of the concept of equality, before using the '=' sign. Calculations should be on either side of the '=' to that children don't misunderstand '=' as to mean 'the answer'.

15 - 2 = 13
15 - 18 = 3

make connections between arrays and number patterns

Arrays

Looking at columns
2 + 2 + 2
3 groups of 2

Looking at rows
3 + 3
2 groups of 3

Arrays and repeated addition

4 x 2 or 4 + 4

2 x 4
or 2 + 2 + 2 + 2

make connections between arrays and number patterns

There are 4 groups of 3 in 12.
12 shared between 4 is 3.

solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as 7 = [] + 4

To support this, when solving calculations, missing numbers should be placed in all possible places:

3 + 4 = 7 7 = 4 + 3
3 + 7 = 10 7 = 10 - 3
4 + 7 = 11 7 = 11 - 4
7 + 4 = 11 7 = 11 - 4

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as 7 = [] - 9

To support this, when solving calculations, missing numbers should be placed in all possible places:

16 - 9 = 7 7 = 16 - 9
16 - 7 = 9 7 = 16 - 9
7 - 9 = 7 7 = 16 - 9
7 - 7 = 0 7 = 16 - 9

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

solve one-step problems involving multiplication, by calculating the answer using concrete objects, pictorial representations and arrays with the support

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

solve one-step problems involving division, by calculating the answer using concrete objects, pictorial representations and arrays with the support

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

understand and use vocabulary for addition, e.g. put together, add, altogether, total and more than

+, add, more, plus, make, total, altogether, score, double, near double, one more, two more... ten more.

= equals, sign, is the same as

How many more to make...? How many more is... than...? How much more is...?

Repetition of facts with different vocabulary:
"What is 2 add 5?" "What is 2 more than 5?"
"What is 2 plus 5?" "What is the total of 2 and 5?" etc

understand and use vocabulary for addition and subtraction, e.g. take away, distance between, difference between and less than

- subtract, take (away), minus, leave, how many are left/left over? how many have gone? one less, two less, ten less... how many fewer is... than...? how much less is...? difference between, half, halve, counting up/back...

= equals, sign, is the same as

Repetition of facts with different vocabulary:
"What is 7 take away 3?" "What is 3 less than 7?"
"What is 7 subtract 3?"
"What is the difference between 3 and 7?" etc

use a variety of language to describe multiplication

count on (from, to), count back (from, to), count in ones, twos, threes, fours, fives... count in tens, lots of, groups of, x, times, multiply, multiplied by, multiple of, once, twice, three times... ten times... times as (big, long, wide... and so on), repeated addition, array, row, column, double, halve

= equals, sign, is the same as

use a variety of language to describe division

Array, row, column, halve, share, share equally, one each, two each, three each... group in pairs, threes... tens, equal groups of
+, divide, divided by, divided into, left, left over

= equals, sign, is the same as

Part-part whole model
Used as a representation for adding and subtracting.
Children can find commutative.

20 bead string
These are used to support their understanding of numbers up to 10 counting forwards and backwards in Reception. These are used to reinforce their counting forwards and backwards up to 20.

Tens frame
For one more or one fewer
2 frames to move across

Children can add or remove counters and can be used for Addition and Subtraction.

'I know that...+...=...'
'If ...-...=... then I know that ...-...=...'

Subitise
Using a dice or Numicon to understand the meaning of a number

Numicon
Used to support their number bonds to 10, 20 and so on. Children can look at the commutative through Numicon, and notice patterns taught through subitising in Reception.

Year 2

Number – addition and subtraction

Number – multiplication and division

recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100

Play games, chant, test etc to increase speed of recalling facts to 20.
Make models and images to display facts.
Investigate related facts to 100 and repeat above.

recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100

Play games, chant, test etc to increase speed of recalling facts to 20.
Make models and images to display facts.
Investigate related facts to 100 and repeat above.

recall and use multiplication facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers

Play games, chant, test etc to increase speed of recalling facts to 20.
Make models and images to display facts.
Investigate related facts to 100 and repeat above.

recall and use division facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers

Play games, chant, test etc to increase speed of recalling facts to 20.
Make models and images to display facts.
Investigate related facts to 100 and repeat above.

add numbers using concrete objects, pictorial representations, and mentally, including:

- a two-digit number and ones or tens

Counting on
 $15 + 2$ "Put 15 in your head, 16, 17."

Partition number and recombine
 $27 + 9 = 20 + 7 + 9$
 $= 20 + 16$
 $= 36$

Count on by splitting units to make next multiple of ten
 $36 + 8 = 36 + 4 + 4$
 $= 40 + 4$
 $= 44$

Adding near numbers and adjusting
 $33 + 9 = 33 + 10 - 1$

Hundred Square
 $17 + 30$

subtract numbers using concrete objects, pictorial representations, and mentally, including:

- a two-digit number and ones or tens

Counting back
 $63 - 20$ "Put 63 in your head, 53, 43."

Use unprepared numbered lines to subtract, by counting back in units:
 $16 - 4 = 12$

Hundred Square
 $43 - 30$

connect the 10 multiplication table to place value, and the 5 multiplication table to the divisions on the clock face

H	T	U
	1	0
	2	0
	3	0
	4	0

connect the 10 multiplication table to place value, and the 5 multiplication table to the divisions on the clock face

H	T	U
	1	0
	2	0
	3	0
	4	0

- two two-digit numbers

Use empty number lines to add two 2 digit numbers, by counting on in multiples of ten then multiples of one.
 $63 + 16 = 79$

Partition into tens and ones and recombine
 $12 + 23 = 10 + 2 + 20 + 3$
 $= 10 + 20 + 2 + 3$
 $= 30 + 5$
 $= 35$

Hundred Square
 $32 + 23$

Refine to partitioning the second number only:
 $23 + 12 = 23 + 10 + 2$
 $= 33 + 2$
 $= 35$

- two two-digit numbers

Use known number facts and place value to subtract (partition second number only)
 $37 - 12 = 37 - 10 - 2$
 $= 27 - 2$
 $= 25$

Find a small difference by counting up
 $42 - 39 = 3$

Subtract mentally a number near 10 to or from a two-digit number
 $35 - 19 = 35 - 20 + 1$

relate multiplication to arrays and to repeated addition using a range of materials and contexts

Practically combine groups of objects (2s, 5s and 10s) and verbalise (then record) what has been found out: There are 3 plates. Each plate has 2 star biscuits on. How many biscuits are there? $2 + 2 + 2 = 6$

Mum washed 5 pairs of socks, how many socks did she get out of the washing machine? $2 + 2 + 2 + 2 = 10$

Use arrays for repeated addition and relate this to the x calculation: (Use counters or objects as well as visual representations to support understanding)

$5 + 5 + 5 = 15$ $3 + 3 + 3 + 3 = 15$

$5 \times 3 = 15$ $3 \times 5 = 15$

Use a number line for repeated addition:

$6 \times 3 = 18$

relate division to grouping and sharing discrete and continuous quantities, to arrays and to repeated subtraction using a range of materials and contexts

Initially, pupils to practically 'share' and 'group' using practical equipment and pictorial representation. Move on to using arrays to identify groups, use physical counters before pictorial representations:

How many groups of 3 are in 15?

Grouping using a number line:

There are 30 children in the class, how many groups of 5 can we get into?

Use counters to support pupils understanding:

record addition and subtraction in columns

Use partitioned column method.

Solve calculations that do not cross the tens boundary, until they are secure with the method. Then solve calculations that do cross the tens boundary. Use base 10 (diennes) to support the understanding of 'carrying' and the value of 'digits'.

$20 + 8$
 $+ 10 + 3$
 $40 + 1 = 41$
 10
 $= 40$

$28 + 13$

record subtraction in columns

Introduce partitioned column method where no exchanging is required:

$46 - 22 = 24$

$40 + 6$
 $- 20 + 2$
 $20 + 4$

use base 10 (diennes) to support understanding

calculate mathematical statements for multiplication within the multiplication tables and write them using the multiplication (x) and equals (=) signs

$3 \times 4 = 12$

Repetition of sentence with different vocabulary:

- "3 times 4 equals 12"
- "3 lots of 4 are 12"
- "3 multiplied by 4 equals 12"
- "The product of 3 and 4 is 12"

calculate mathematical statements for division within the multiplication tables and write them using the division (÷) and equals (=) signs

$12 \div 4 = 3$

Repetition of sentence with different vocabulary:

- "12 divided by 4 equals 3"
- "12 shared by 4 is 3"
- "12 grouped into 4s is 3"

<p>Part-part whole model Used as a representation for adding and subtracting. Children can find commutative.</p>  <p>Numicon Used to support number bonds up to 100. Make models and images to display facts. Investigate patterns within tables.</p>

Counting on
 $115 + 2$
 "Put 115 in your head, 116, 117."
Partition number and recombine
 $127 + 90 = 100 + 20 + 7 + 90$
 $= 100 + 110 + 7$
 $= 100 + 117$
 $= 217$

Adding near numbers and adjusting
 $433 + 90 = 433 + 100 - 10$
 $= 533 - 10$
 $= 523$
Count on by splitting units to make next multiple of ten/hundred
 $360 + 80 = 360 + 40 + 40$
 $= 400 + 40$
 $= 440$

Counting back: 263 - 5
 "Put 263 in your head, 262, 261, 260, 259, 258."
 Subtract mentally a 'near multiple of 10' to or from a two-digit number:
 $678 - 90 = 678 - 100 + 10$

Use unprepared numbered lines to subtract, by counting back:
 $516 - 400 = 116$

 -100 -100 -100 -100

understand and use mental methods using commutativity and associativity (for example, $4 \times 12 \times 5 = 4 \times 5 \times 12 = 20 \times 12 = 240$)

Use a variety of resources (including a calculator) to investigate order of multiplication.
 Make models and images to display facts.

understand and use mental methods using multiplication facts (e.g. using $3 \times 2 = 6$, $6 \div 3 = 2$ and $2 = 6 \div 3$) to derive related facts (e.g. $30 \times 2 = 60$, $60 \div 3 = 20$ and $20 = 60 \div 3$)

two two-digit numbers (including answer crossing 100)
Counting on with number lines
 $48 + 36 = 84$

Partition both numbers and recombine
 $27 + 82 = 20 + 7 + 80 + 2$
 $= 100 + 9$
 $= 109$
Add the nearest multiple of 10, then adjust
 $63 + 59$ is the same as $63 + 60 - 1$
Count on by partitioning the second number only
 $36 + 93 = 93 + 30 + 6$
 $= 123 + 6$
 $= 129$

two two-digit numbers (including answer crossing 100)
Use known number facts and place value to subtract (partition second number only)
 $37 - 12 = 37 - 10 - 2$
 $= 27 - 2$
 $= 25$

Find a small difference by counting up
 $42 - 39 = 3$

Subtract mentally a number near 10 to or from a two-digit number
 $35 - 19 = 35 - 20 + 1$

$30 \times 5 = 150$ $50 \times 3 = 150$ $150 \div 5 = 30$ $150 \div 3 = 50$
 $3 \times 5 = 15$ $15 \div 3 = 5$
 $3 \times 50 = 150$ $150 \div 30 = 5$
 $5 \times 3 = 15$ $15 \div 5 = 3$
 $5 \times 30 = 150$ $50 \times 30 = 1500$ $30 \times 50 = 1500$ $150 \div 50 = 3$

add numbers with up to three digits, using formal written methods of columnar addition

Extend mental method of partitioning and recombining:
 $158 + 72 = 100 + (50 + 70) + (8 + 2)$
 $= 100 + 120 + 10$
 $= 230$

Vertical expansion
 367
 $+185$
 552

Column addition
 367
 $+185$
 552
 11

Including money
 $\pounds 2.50$
 $+ \pounds 1.75$
 $\pounds 4.25$
 1

Use base 10 (diennes) or place value counters to support understanding of carrying and to ensure conceptual understanding of place value:
 Exchange 10 tens for 1 hundred and group with the hundreds.

If children are experiencing persistent difficulties, they could use the partitioned column method with carrying (using Diennes for support):
 $200 + 40 + 6$
 $70 + 6$
 $300 + 20 + 2$
 $100 \quad 10$

subtract numbers with up to three digits, using formal written methods of columnar subtraction

Use base 10 (diennes) as a practical method to introduce exchanging
 $31 - 18 = 13$

When pupil(s) are confident in doing this practically and verbalizing the calculation, begin to record using partitioned column method:
 $20 \quad 1$
 $30 + 1$
 $-10 + 8$
 $20 \quad 9$

Introduce Column Subtraction without decomposition:
 458
 -232
 226

When secure with exchanging, use partitioned column method to solve calculations involving 3 digit numbers. Repeating the practical stage if necessary.

develop reliable written methods for multiplication, starting with calculations of two-digit numbers by one-digit numbers and progressing to the formal written methods of short multiplication

Start by reinforcing mental methods of partitioning:
 $15 \times 2 = 30$ $13 \times 3 = (10 \times 3) + (3 \times 3) = 30 + 9 = 39$

Grid Method
 1. Introduce the grid method by linking it to arrays initially (using counters).
 2. Use base 10 (diennes) with grid method to support understanding of place value.
 3. Use the grid method: $12 \times 3 = 36$

$12 \times 3 = 36$

x	3	
10	30	
2	6	
		36

develop reliable written methods for division, starting with calculations of two-digit numbers by one-digit numbers and progressing to the formal written methods of short division

Use counters and a number line to support pupils understanding. Number lines
 How many 3's make 18?

Hoops and dots
 $16 \div 2 = 8$

Move on to calculations that leave remainders and/or require tables knowledge:
 1) $16 \div 3 = 5 \text{ r } 1$

 2) $69 \div 3 = 23$

When pupils have had experience with and demonstrated understanding of grouping for division, begin to look at short division with no remainders in the final answer.
 Use counters/Diennes to support understanding.

solve problems, including missing number problems, using number facts, place value, and more complex addition

Missing numbers should be placed in all possible places:
 $3 + 4 = \square$ $\square = 4 + 3$
 $3 + \square = 7$ $7 = \square + 4$
 $4 + \square = 7$ $7 = 3 + \square$
 $\square + \square = 7$ $7 = \square + \square$

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

solve problems, including missing number problems, using number facts, place value, and more complex subtraction

Missing numbers should be placed in all possible places:
 $16 - 9 = \square$ $\square = 16 - 9$
 $16 - \square = 7$ $7 = \square - 9$
 $\square - 9 = 7$ $7 = 16 - \square$
 $\square - \square = 7$ $7 = \square - \square$

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

solve problems, including missing number problems, involving multiplication, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects

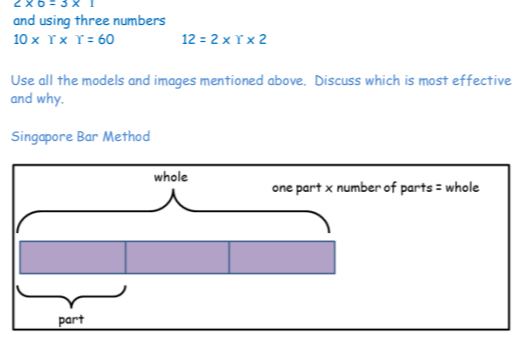

solve simple problems in contexts, deciding which of the four operations to use and why

Missing numbers placed in all possible places.
 $7 \times 2 = \square$ $\square = 2 \times 7$
 $7 \times \square = 14$ $14 = \square \times 7$
 $\square \times 2 = 14$ $14 = 2 \times \square$
 $\square \times \square = 14$ $14 = \square \times \square$

Extend to
 $2 \times 6 = 3 \times \square$
 and using three numbers
 $10 \times \square \times \square = 60$ $12 = 2 \times \square \times 2$

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

solve problems, including missing number problems, involving division, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects

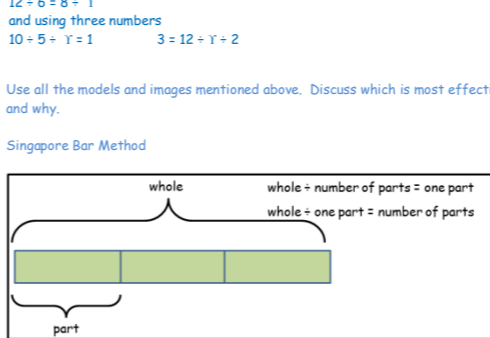

solve simple problems in contexts, deciding which of the four operations to use and why

Missing numbers placed in all possible places.
 $6 \div 2 = \square$ $\square = 6 \div 2$
 $6 \div \square = 3$ $3 = 6 \div \square$
 $\square \div 2 = 3$ $3 = \square \div 2$
 $\square \div \square = 3$ $3 = \square \div \square$

Extend to
 $12 \div 6 = 8 \div \square$
 and using three numbers
 $10 \div 5 + \square = 1$ $3 = 12 \div \square + 2$

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

Year 6

Number - addition and subtraction

Number - multiplication and division

perform mental calculations, including with mixed operations and large numbers (and decimals)

Partition both numbers into hundreds, tens, ones and decimal fractions and recombine

$$35.8 + 7.3 = 30 + 5 + 0.8 + 7 + 0.3$$

$$= 30 + 12 + 1.1$$

$$= 42 + 1.1$$

$$= 43.1$$

Partition second number only into hundreds, tens, ones and decimal fractions and recombine

$$35.8 + 7.3 = 35.8 + 7 + 0.3$$

$$= 42.8 + 0.3$$

$$= 43.1$$

Add the nearest whole number then adjust

$$52 + 11.9 = 52 + 12 - 0.1$$

$$= 64 - 0.1$$

$$= 63.9$$

perform mental calculations, including with mixed operations and large numbers (and decimals)

Use known number facts and place value to subtract

$$6.1 - 2.4 = 3.7$$

Subtract the nearest whole number then adjust

$$52 - 11.9 = 52 - 12 + 0.1$$

$$= 40 + 0.1$$

$$= 40.1$$

perform mental calculations, including with mixed operations and large numbers (and decimals)

Partitioning

$$4.7 \times 6 = (4 \times 6) + (0.7 \times 6)$$

$$= (24) + (4.2)$$

$$= 28.2$$

Double and halve

$$4.25 \times 32 = 8.5 \times 16$$

$$= 17 \times 8$$

$$= 34 \times 4$$

$$= 68 \times 2$$

$$= 136$$

perform mental calculations, including with mixed operations and large numbers (and decimals)

Partitioning

$$7.2 \div 3 = (6 \div 3) = (1.2 \div 3)$$

$$= 2 + 0.4$$

$$= 2.4$$

identify common factors, common multiples and prime numbers

Use a variety of resources (including a calculator) to investigate common factors, common multiples and prime numbers. Make models and images to display facts. Investigate the patterns within the numbers.

Identify common factors, common multiples and prime numbers

Use a variety of resources (including a calculator) to investigate common factors, common multiples and prime numbers. Make models and images to display facts. Investigate the patterns within the numbers.

practise addition for larger numbers, using the formal written methods of columnar addition

Extend the use of compact column method to adding several numbers with mixed decimals.

Children should be reminded of the importance of aligning the columns accurately.

practise subtraction for larger numbers, using the formal written methods of columnar subtraction

Column Subtraction with decomposition

$$\begin{array}{r} 754 \\ - 286 \\ \hline 468 \end{array}$$

$$\begin{array}{r} 8.36 \\ - 1.17 \\ \hline 7.19 \end{array}$$

Revision of formal compact column method extending to more complex integers and applying to problem solving using money and measures, including decimals with different numbers of decimal places.

Align the decimal point when setting out calculations.

Use 'place holders' to aid understanding of the value in that column.

multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of short and long

multiplication

Short multiplication and Long multiplication as in Year 5, but apply to numbers with decimals.

Pupils may need reminding that single digits belong in the ones (units) column.

A sound understanding of place value and the formal method itself are required before progressing to decimal multiplication.

divide numbers up to 4 digits by a two-digit whole number using the formal written method of short and long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context

Short division

Short division

$$98 \div 7 \text{ becomes } \begin{array}{r} 14 \\ 7 \overline{) 98} \\ \underline{7} \\ 28 \\ \underline{28} \\ 0 \end{array} \quad \text{Answer: 14}$$

$$432 \div 5 \text{ becomes } \begin{array}{r} 86 \text{ r } 2 \\ 5 \overline{) 432} \\ \underline{40} \\ 32 \\ \underline{30} \\ 2 \end{array} \quad \text{Answer: 86 remainder 2}$$

$$496 \div 11 \text{ becomes } \begin{array}{r} 45 \text{ r } 1 \\ 11 \overline{) 496} \\ \underline{44} \\ 56 \\ \underline{55} \\ 1 \end{array} \quad \text{Answer: } 45 \frac{1}{11}$$

Remainders

Quotients expressed as fractions or decimal fractions

$$61 \div 4 = 15 \frac{1}{4} \text{ or } 15.25$$

solve addition multi-step problems in contexts, deciding which operations and methods to use and why

Use all the models and images mentioned above. Discuss which is most effective and why.

solve subtraction multi-step problems in contexts, deciding which operations and methods to use and why

Use all the models and images mentioned above. Discuss which is most effective and why.

solve problems involving multiplication

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

solve problems involving division

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

<p>Singapore Bar Method</p> 	<p>Singapore Bar Method</p>
