A stone sculpture of a Plesiosaurus, a prehistoric marine reptile, is shown in a pond. The sculpture is made of grey stone and is covered in small yellow lichen. It has a long, narrow head with a small eye and a slightly open mouth showing small teeth. The body is large and rounded, with a long, thick neck that curves back over its head. The sculpture is positioned in the water, with its head and neck above the surface and its body partially submerged. The background shows a pond with water reflecting the sky and surrounding greenery. The entire image is framed by a white border with a decorative green and yellow pattern on the sides.
