

Find Differences by Counting Up: Decimals

- Sometimes it is more efficient to find a difference by counting up rather than using a written method. Use counting up on number lines to calculate the following differences.

○ **For example:** $7.3 - 2.8 = 4.5$

1. $10 - 3.5 =$
2. $5 - 2.9 =$
3. $8.1 - 7.5 =$
4. $7.3 - 3.4 =$
5. $9.6 - 4.7 =$
6. $20 - ? = 6.8$
7. $? - 3.65 = 8.54$

Find Differences by Counting Up: Decimals

- For example: $5.00 - 1.74 = 3.26$

1. $5.00 - 3.4 =$
2. $5.00 - 2.36 =$
3. $10.00 - 7.42 =$
4. $6.3 - 5.79 =$
5. $8.1 - ? = 5.84 =$
6. $5.42 - ? = 4.65 =$
7. $? - 7.48 = 20.43$
