# Find the Missing Number

- Use counters to find the missing numbers in these calculations.

  - For example $\frac{1}{4}$ of $\square = 3$

$\frac{1}{4}$ of the number is:

- So the whole number must be:

- The missing number is 12.

1. $\frac{1}{3}$ of $\square = 5$

2. $\frac{1}{5}$ of $\square = 4$

3. $\frac{2}{3}$ of $\square = 8$

4. $\frac{3}{4}$ of $\square = 12$

5. $\frac{5}{7}$ of $\square = 15$

- Think of a way to find the following missing numbers without using counters.

6. $\frac{1}{6}$ of $\square = 5$

7. $\frac{3}{8}$ of $\square = 21$
